In stating his own opinion, Dr. Hunt said that he believed many cases in which phthisis coexisted with diabetes were cases in which the diabetes had supervened upon the phthisis. In his experience the cause of death in diabetics was other than phthisis—coma, œdema of the lungs, or exhaustion.

As to the social condition of the patients, he said that most of his cases were in wealthy people. In age they were for the most part above fifty years. He had noted in several cases a remarkably low specific gravity: in one case 1.010.

In regard to the character of the gangrene met with in diabetics, he said it was usually moist, but in hard tissue it was dry and like that known as senile gangrene; the different varieties depending on the character of the tissues involved.

A point in the differential diagnosis between diabetic and senile gangrene is that in the former there is never, or at most very rarely, a good line of demarcation between the healthy and diseased tissues; while in senile gangrene such a line is usual.

Dr. Hunt then stated that he had been called in January, 1885, to see a wealthy gentleman 76 years old, who was in an attack of apoplexy. He recovered from this attack, but remained a chronic semi-paralytic. On Jan. 9, 1888, he was again called to see the patient and found him comatose, with flushed face, temperature 103°, pulse 120, and with Cheyne-Stokes respiration. There was evidently effusion of fluid in the brain, and pressure upon the respiratory

centre. The interesting point in the case is that sugar now appeared in the urine—from pressure upon the diabetic centre in the fourth ventricle.

Dr. Hunt also referred to a case in which he was called to a patient and found him in deep coma; his respirations 60, pulse 150, and sugar in his urine. The respiration could be stopped by exciting a reflex such as the stomach reflex. Death occurred in two hours from cessation of breathing. He also referred briefly to a case in which he believed a patient had died from acute diabetic gangrene; but in this case the urine either was not examined, or no record of the examination was kept.

Regarding the frequency of diabetic gangrene, Dr. Hunt expressed the opinion that it was second only to the traumatic variety. It is a disease of the wealthy and not of the poor, and in nature seems to be related more to gout than to phthisis. He believes a diabetic drunkard to be rare, and is inclined to ascribe diabetes to overeating with deficient exercise: "Excess in food clogs; excess in drink crazes." He thinks the vaso-motor system must be affected in this disease, and instances in proof of this the well-known fact that impotence is common in men affected with diabetes.

Dr. Thomas G. Morton, in opening the discussion, read a brief account of thirteen cases occurring in his practice. In his cases the disease as usual affected most frequently the lower extremity below the knee. In illustration of the rarity of the disease among the poorer classes, he instanced the fact that among 20,000 patients in the hospitals for the insane in Pennsylvania not a single case is reported.

Dr. Morton said he had known the disease to follow a slight operation, such as the cutting of a corn. As regards the surgical treatment of diabetic gangrene, he thought it should be palliative; in most cases the disease is promptly fatal. In some cases it may be arrested by free incisions. In two of his cases there was very acute pain, and in these he had given relief to the suffering by cutting the nerves supplying the parts.

Dr. John Ashhurst, Jr., stated that all are familiar with the fact that diabetes is a cause of certain gangrenous affections, and that certain injuries, such as that of the floor of the fourth ventricle, give rise to diabetes—or, to speak more accurately, to glycosuria. In these cases the condition of the urine varies very markedly; sometimes the quantity of sugar present is very large; sometimes it is very small. Indeed the quantity may be so small that its presence escapes detection altogether.

He had seen but one case in which diabetes was recognized as a predisposing cause of gangrene. This was a case of strangulated hernia, in a man in middle age, who had long been a diabetic. The incarceration was five or six days old, and when he operated the bowel was found to be gangrenous in one patch. He made an artificial anus, and very soon after the operation the whole region of the wound became progressively gangrenous, and death followed.

He referred to the fact that gangrene is often precipitated in diabetics by trifling injuries, such as cutting a corn.

The fact that the gangrene of diabetes is usually moist rather than dry is of value when a question of diagnosis arises. We believe that alcoholism is a not infrequent cause of diabetic gangrene, and in many cases of spontaneous gangrene in diabetics we must attribute this to alcoholism rather than to the diabetes.

He called attention to the fact that it is not very uncommon to have spontaneous gangrene in certain forms of Bright's disease, while a granular kidney diabetes may be present and not be recognized.

In regard to the treatment of diabetic gangrene, Dr. Ashhurst said, the less done locally, the better. He would advise not only waiting until the line of demarcation formed, but waiting for a line of separation, which sometimes does not form until weeks after the gangrene begins. No operation should be undertaken until this period, and then the surgeon should merely trim off the parts ready to separate, with scissors and forceps, rather than undertake a formal amputation. Constitutional treatment is of the greatest importance. The remedy most useful in diabetic gangrene is one which is of the greatest service in diabetes, namely, opium; and it is also a remedy very valuable in traumatic gangrene. His own practice is to give one grain of opium, night and morning.

Dr. James Tyson thinks diabetic gangrene must be a very rare disease, for among 55 cases which he has notes of since 1884, he has not met with a single case.

In answer to the question whether or not he had seen a case like that reported by Dr. Hunt, in which diabetes followed effusion and pressure upon the medulla, he said he had not met one just like it, but mentioned a case in which a wealthy man, 56 years old, who had been under his care three years for diabetes, became hemiplegic. On the

appearance of the hemiplegia the diabetes disappeared, and has not reappeared for two years. Sugar in this case was frequently present to the extent of from 2 to 5 per cent., and on one occasion rose to 7 per cent.

As bearing out what had been said as to the social condition of diabetics, he said that in the Philadelphia Hospital, where there are one thousand beds, he was frequently unable for weeks at a time to find a case of diabetes to lecture on. Dr. Tyson has noted extreme pain in one case of diabetes in which there was also granular kidney.

Dr. James Darrach reported one case, which had been already referred to by Dr. Hunt, and stated that he had at one time examined a large number of aged persons to determine whether or not sugar in the urine of such persons is usual. He distinctly asserts that it is not usual.

Dr. Darrach also suggested that the condition of the arteries found in some cases of gangrene might itself be a stage of gangrene. He said that in shingles the skin supplied by peripheral terminations of the sensitive nerves was gangrenous, from a depraved condition of the nerves.

Dr. S. W. Gross said that he could see no direct connection between diabetes and gangrene; the former is only a predisposing cause of the latter, just as weak heart and arterio-sclerosis are. He called attention to the age of the patients in whom diabetes occurs in illustration of the assertion that arterio-sclerosis is frequently present; in such cases traumatism occurs and is followed by inflammation and gangrene. He reported a case bearing out this pathology. With regard to König's recommendation to amputate when the patient persistently grew worse in spite of proper medicinal treatment, he said the after-history of two of König's cases justified his advice; for in one case 24 hours after amputation, and in another 4 days after, the sugar disappeared from the urine and did not return. Dr. Gross favors operative interference under the circumstances mentioned by König.

Dr. Osler thinks that Dr. Hunt has underrated rather than overrated the frequency of pulmonary complications in diabetes. He referred to Frerichs' monograph on diabetes, in which the author states that one-half of the four hundred cases upon which his work is based died of pulmonary affections. The latter are grouped by Frerichs as: 1. Gangrene. 2. Broncho-pneumonia. 3. Tuberculosis. The first is referred to arterio-sclerosis as the cause.

Dr. J. William White, in illustration of the importance of estimating the associate disorders which may exist in a case of diabetes, mentioned a case of Dr. Agnew's (mentioned by Dr. Hunt), in which there were profound changes in the blood-vessels.

Dr. S. Solis Cohen said that it was the custom at the Medical Dispensary of the Jefferson Hospital to examine the urine of every patient, regardless of his symptoms. These examinations seem to Dr. Cohen to indicate that diabetes is not so rare a disease among the poorer classes as it is commonly supposed to be.

Dr. DeForest Willard cautioned against operative interference.

Dr. Ashhurst said that he thought the degree of pain met with in gangrene depends upon the rapidity of death of the part: when the death is slow there is much pain, but when death is rapid there is usually little pain.

NEW YORK ACADEMY OF MEDICINE.

Stated Meeting, December 6, 1888.

The President, A. Jacobi, M.D., in the Chair.

Dr. A. L. Loomis was nominated for the office of President by Dr. A. Jacobi. The latter declined a renomination.

Dr. J. R. Leaming read a paper entitled:

Acoustics Applied to the Human Chest in Physical Diagnosis,

in which he said that it was not until the laws of light were studied in relation to the eye that ophthalmology became a true science. There is a law of acoustics which, when applied to the air chamber of the chest, will place the diagnosis of diseases of the organs within on a scientific basis. This practical age of the application of the laws of sound to the telegraph, phonograph, etc., makes it easy to apply acoustic law to the chest in diagnosis. Dr. Leaming considered the different facts involved in this subject, beginning with a brief statement of the laws governing sound, the most important of which, in this connection, are that sound consists of vibrations of the air; a greater number than seventeen hundred vibrations a second is not appreciated by the human ear; and fewer than thirty-two a second give the impression of distinct sounds. He described the chest as a chamber whose walls are lined with a dense elastic smooth membrane, and closed at the base by the diaphragm. It is a perfect acoustic

chamber which can be enlarged or contracted, and its power increased or diminished with the speed of thought. While a most perfect instrument for the formation and reflection of sound waves, it is liable to alteration by disease and its acoustic qualities to change. It also contains the lungs, tubes, and heart, which interfere with its acoustic qualities. The heart and lungs accomplish their work with sound, and to these the auscultator must attribute due importance. The arrangement of the tubes and sacs in the lungs also constitutes an acoustic instrument, but of a different kind from that of the chest chamber. Each sac is a resonator distended with air constantly rarefied by heat, and upon this air the sac constantly contracts, causing vibrations which help to make up the vibrations of the respiratory murmur. Sound waves also pass in from the open air and are consonated in each sac, as are also the friction vibrations of the tidal air rushing in and out through the open bronchi.

Speaking of acoustic laws as applied to the heart the author said he had become further convinced of the correctness of the view expressed by him twenty years ago regarding the origin of the first sound of the heart. It is formed by the vibrations of the tense mitral valve, by the tense chordæ, the sound of muscular contraction, and the friction of the blood.

Regarding stethoscopes, he said there is none better than Camman's binaural instrument; but for accuracy and delicacy, and least likelihood of getting out of order, nothing equals the application of the temporal bone of the head to the resonant body; the most sensitive point of this bone is in front of, and just above, the external ear.

The paper was discussed by Dr. A. L. Loomis, who thought it could not be more finished as it related to the principles of acoustics in diagnosis of diseases of the chest; but it had brought the subject down to the practical application of those principles and left it there to be carried farther by each hearer. Dr. Loomis regards four qualities of sound as of everyday use to the diagnostician—pitch, quality, duration, and rhythm. He fully agrees with Dr. Leaming regarding the importance of cardiac rhythm, slight alterations of which being often of greater significance than murmurs without change in rhythm. He has never been able to separate what Dr. Leaming had referred to as the consonant resonance of the sacs from the other elements of the respiratory murmur.

Foreign Correspondence.

JOTTINGS FROM AROUND THE WORLD.

Curative Influences of a Long Ocean Voyage. —Victoria Eye and Ear Hospital.—Scrofulous Arthritis.—Conservative Surgery.—Operations for Hernia.—Antisepsis.

Melbourne, Oct. 25, 1888.

The curative effects of ocean climate in certain cases of sickness are now becoming better known each year. Dr. William S. Wilson, of England, has done much in his writings to make the ocean better appreciated as a health resort.

One of the essential points in obtaining the full benefit of the sea trip is to make it long enough. Now our transatlantic steamers make the trip from New York to England in about a week, and this is far too short a time to get the constitutional changes to be hoped for in an ocean climate. The trip to the South Seas can now be made with comfort, and through the finest of climates; the novelty and this constant diversion are factors not to be forgotten. Someone has said that the north Atlantic is the stormiest water in all the world; many of us have had the experience of this, and moreover, it is almost always cold; the winds with icy breath blowing down from the Borean regions chill one even in midsummer. But if one should travel over the southern route of the Southern Pacific Railroad to San Francisco, then take the steamer from there here, he would have one long extended summer all the way to Melbourne. Start when you please from the American metropolis of the Pacific; it is not cold, and be it July or January, the climate of the Pacific Ocean, from the enchanting Hawaiian Islands down through the dreamy softness of the Samoan group, on to the everlasting springtime of Northern New Zealand, even to the southern coast of Australia at Melbourne, will permit one long continued life in the air and sunshine. Surely this must be the future ocean trip of the invalid. One is scarcely embarked for Europe before he finds himself steaming up the Channel; here, day in and day out for weeks, he can draw in the ozone, every atom of the body feeling the good influence; here are new regions for him to see, new peoples to meet, new fish to catch in the waters, new stars to watch in the heavens. May I urge my medical brothers to give attention to the claims of the glorious Pacific as a health resort? The heat of the tropics during the few days that it requires

to cross that region is not so oppressive as is often imagined. I have seen many a hotter term in Philadelphia. To dress or almost to undress in light and cool clothing, lie lazily under the canvas deck-covers, and simply breathe, doze, and dream away the day is to a hard-worked man a state of bliss; and as evening in these regions comes on, almost always the air is delightfully cool, and often a light wrap is not amiss.

From my personal experiences I can say that this prolonged ocean trip is a God-send to those troubled with insomnia. My own sleep soon amounted to fifteen or twenty hours a day; and oh! what rest, away from all noise, in an air so pure and sweet, with that delightful salty smell which used to refresh me so much on nearing Atlantic City on a hot summer afternoon! How many days did I promise myself that I would certainly do some reading and some writing, and would sit down on my steamer-chair on deck, only to find myself an hour afterward just emerging from a nap, my note-book rolling about the deck, and my lead-pencil overboard riding the waves of the blue Pacific. My dear doctor, have it as a treat in store to make this trip among the islands of the South Seas. Now, speaking entirely from the experience I have gained from my own trip and from the conversations I have had with both patients and physicians who have made the same voyage, there are some diseases which seem to be especially benefited by a long ocean voyage; among these are: 1. Early consumption — during the premonitory stage; in these cases the utmost advantage is to be gained, often complete cure, and always arrest of the progress of the disease. But *when cavities are forming do not send* the patient. 2. Bronchial troubles are helped by getting the patient away from the severe winters of the north and giving him a long summer in the tropics or sub-tropics; such a person on coming to land should not go to Melbourne to reside, but should select a drier place, some part of New South Wales, or as far north as Queensland, more under the tropics. 3. For the after-effects of an attack of pneumonia, where there is a little hardening remaining, or the general health has been left below par, this is just the trip; the pure air, the rest, the increased appetite, all conduce toward making a most complete cure. I have been disappointed so far in seeing much relief to the unfortunate asthmatic. I am prepared to assert that the nervous man or woman will find a long sea trip of the utmost benefit; if he or she has been disappointed in a European trip I do not wonder; but this voyage lasting weeks, and steaming, or perhaps better yet, sailing in and out among these islands, can not fail to make an impression for good if there is the slightest chance for any improvement. In such cases we get all the factors of a sea life to combine in doing their good offices for the weakened nervous system—rest, change, different mode of life, the breaking up of bad customs, getting out of one's self, the cheer, the social surroundings—all are so favorable. This is not theory; one need only go on such a journey to see many a patient day by day improve and make rapid advances toward health.

What has been said applies also to those cases classified as debility—the overworked professional man or merchant, the young girl who has overtaxed her strength, the languid, anemic girl or boy, the patient with amenorrhœa—all these patients are sure to improve.

I have just returned from the Victorian Eye and Ear Hospital of Melbourne. This hospital was founded in the year 1866 by A. S. Gray, M.R.C.S., Eng., who is the senior surgeon at the present time. It was my good fortune to find this genial Irish gentleman making his morning rounds, and I received a hearty welcome and an invitation to visit the wards with him. During the last year the hospital has received 406 in-patients, and treated 17,132 out-patients; the number of operations has amounted to 858. It is the only hospital of the kind in the colony of Victoria, and many of the patients are from the country districts. Mr. Gray expressed regret that the students did not take more advantage of this rich clinic: this morning there was not one in attendance; sometimes there are a dozen or so, but student-like, attendance is small unless it is compulsory. This institution receives some support from the Government, but the most of the funds are from private sources.

The surgical staff consists of two Honorary Surgeons and one Honorary Assistant Surgeon. Mr. Gray has been elected a life surgeon, in recognition of his being the founder of the institution. The other surgeons are elected for ten years, and the assistant for five years. One hundred and eleven cataracts were operated on during the year. Of all the operations performed only ten were on the ear. The standard treatment for purulent ophthalmia is with five or ten grain solution of nitrate of silver. Mr. Gray said that if he saw the patient early enough he never lost an eye under his

treatment. I was struck with the primitive way the drops were put into the eyes of the patients: a common quill cut square was dipped into the solution, and then carried to the eye and a few drops allowed to trickle in between the lids. Many of the little wrinkles so well known in America are not used here. American adhesive plaster of the newer kinds is much used and greatly liked; the Doctor expressed his great indebtedness to "you Yankees" for this kind of plaster.

I trust that my many remarks against the clinical service will not be construed as derogatory to the skillfulness of the clinicians. In this eye service, for example, the masterly hand of a well-drilled and thorough practitioner was shown at every move, and by every remark made concerning the case in hand. I do not propose to allow myself to fall into the error of praising without reserve everything met with simply because it is foreign; and on the other hand I want to steer clear of as great an error of condemning everything simply because it is foreign.

In referring to the statistics of blindness, it is found that Victoria has a good record, for while Portugal is said to have the greatest number of blind to each 10,000 persons living—21.90—New Zealand has the least, only 2.82; and then comes Victoria with 8.60.

During a visit to the Melbourne Hospital when Mr. Ryan was on duty, I saw a very interesting case of complete (scrofulous) degeneration of the wrist in a man 30 years old. The entire structure was soft and broken down; the operation proposed was resection, and if this did not prove successful, then amputation, one or the other of these being the only thing which could be done. Mr. Ryan has been successful in a number of cases of resection in such conditions in getting a fair hand left; only a short time ago, in a case which in his judgment admitted of amputation only, he was forced into resection by the wishes of the family; the result was most gratifying, the amount of usefulness and the entire progress of the case being such as to teach the importance of conservative surgery. On this very account the next case coming under treatment had been given the advantage of a chance. The man had a hand terribly crushed; a trip-hammer had fallen on it and mashed it out of all recognition as a hand; but we saw the hand almost healed, with two fingers left, so that it will be of use to the man in many ways. We then saw a healthy looking wound following an operation for strangulated femoral hernia. A young woman 20 years old was engaged in exercising with dumb-bells and Indian clubs, when she became faint; this was followed by vomiting, pain, and other symptoms indicating strangulation of the bowel. The free application of ice and mild taxis not being attended with any results, an operation was done within twenty hours, and an exceedingly tight stricture was found, with the sac in the liveliest state of congestion. Doubtless if the operation had been delayed only a few hours the result would have been quite different. It is not often that a medical man can feel quite as sure as the operator in this instance was that he has snatched a case from the grave. The great point in Mr. Ryan's practice is, in all those cases in which it is a question of operation or death, to operate early. Of the 18 patients he has operated on for strangulated hernia since last May he has lost but one, and this was an old man of 70, very feeble and partly paralyzed.

I find extreme antiseptic notions are not held here. Mr. Ryan was a pupil and a clerk of the famous Lister, yet he has dropped the rigid rules of the system called after his great master.

The spray is only used when the abdomen is to be opened, and then it is only allowed to play in the room for a time before the hour appointed for the operation. Bichloride is freely used as a wash and for the usual antiseptic purposes; iodoform dusted from a pepper-box is used *ad libitum*.

The walls of the hospital wards are of brick and painted with silica paint, which permits of free washing and hard scrubbing; the floor is of wood and well waxed; a good circulation of air is obtained, and, take it all in all, they seem to get about the same results as those who never operate without making the fearful onslaughts on the bugs which are supposed to hang about the operating-room as sea-gulls after a ship, waiting for some delicate morsel to feed upon. Ryan admits that Listerism has done much good in causing surgeons to be more careful in the ordinary laws of cleanliness. As far as I can learn, not a surgeon in Melbourne practises extreme Listerism.

C. C. VANDERBECK.

—The sanitarium at Youngstown, Ohio, was entirely destroyed by fire on Dec. 12. Eight patients were carried from the burning building on cots. The fire was caused by the combustion of natural gas.

LETTER FROM BERLIN.

Treatment of Poisoning with Carbonic Oxide.—Poisoning with Sulphonal.—Pulverized Sugar as a Remedy in Diphtheria.—A New Peptone.—Death of Prof. H. Von Bamberger.—A Princely Physician.

BERLIN, Nov. 30, 1888.

With the return of cold weather the unsightly German earthen-ware stove comes into use, and cases of grave poisoning with carbonic oxide are recorded in all parts of the empire.

Paul Guttmann, the well-known Chief of the *Moabit Krankenhaus*, has just delivered an interesting clinical lecture on the subject, which your correspondent has taken down in short-hand for the MEDICAL AND SURGICAL REPORTER. The following *résumé* contains the more important parts of the lecture. Two young girls were brought to the *Moabit Krankenhaus*, poisoned with carbonic oxide. They had forgotten to open the valve of the treacherous *Kachelofen* (earthen-ware stove). One girl was dead beyond hope of resuscitation, and the other one was in a state of profound coma. There was no reaction on irritation of the cornea, nor on powerful electrical irritation. Respiration was difficult and so irregular that its stoppage was looked for every moment. The cardiac beat was small and frequent. The patient was conveyed to the Hospital at 7 o'clock A. M., and was immediately placed in a large and airy hall, where artificial respiration was begun and persisted in up to 4 o'clock P. M. When no signs of recovery had appeared by that time, and injections of ether and Faradization had proved equally useless, transfusion of defibrinated blood was resorted to. An assistant physician offered his cephalic vein and six ounces of defibrinated blood were injected into the patient's vein. But even this measure did not prove successful. The girl remained in the same condition for two days and a half. Then œdema of the glottis set in and necessitated tracheotomy, which was followed, however, by death. The girl had been in deep coma altogether for eighty-two hours. The blood showed after death the well-known cherry-red color. Guttmann has observed ten cases of carbonic oxide poisoning within the last nine years; six of the patients recovered, including two whose illness was grave. As to the interesting question whether or not transfusion of blood is of value in this intoxication, Guttmann has always held that the usefulness of the procedure is very limited on account of the naturally scanty quantity of blood which can be transfused. He believes that fresh air is by far the most important and most reliable remedial agent. Experimental researches have also demonstrated that carbonized blood when shaken up with oxygen, or even with atmospheric air, soon regains its normal color.

Prof. Fürbringer, Chief of the Friedrichshain Hospital, who has observed six cases of this intoxication, made some interesting remarks on the subject. Death, he said, ensues not so much from decomposition of the blood, as from the action of the poisoned blood on other organs. He fears the sequelæ of the poisoning more than the poisoning itself. Another interesting question is as to the cause of œdema of the glottis. It is now known that this complication does not arise from the action of the carbonic oxide, but from the irritation caused by the products of dry distillation which are produced by the burning objects.

Sulphonal, the now fashionable hypnotic, is the subject of very varied professional opinion. Some extol it, others condemn it. The truth probably lies, as usually happens, between the extreme statements. Sulphonal has a clearly defined usefulness, and belongs not so much to the class of narcotic agents, which produce sleep by stupefaction, as to the remedies which assist the natural periodical desire for sleep. The new drug is, however, by no means so harmless as has been hitherto asserted by its manufacturers. Dr. Bornemann has just reported a case of severe poisoning resulting from the administration of the drug. The patient, to whom sulphonal was given for insomnia caused by cerebral excitement, was a physician. The result was a pronounced intoxication showing very complicated symptoms. There was a distinct interference of co-ordination, first in the lower and later in the upper extremities. He could not, for instance, raise a cup of coffee. A very prominent feature of the poisoning was his perverted feelings and illusions. The patient believed he had two heads, four feet and arms, etc.; or he believed he was on a boat or in a railway-car, and that someone was about to kill him. These illusions may be termed reflectory. The ataxia referred to is a central one, as it remained unchanged no matter whether the eyes were opened or closed. This distinction between central and sensory ataxia has been made by Prof. Mendel. The drug did not exert any unfavorable influence over the heart and circulation, which appears opposed to the warning of

Dr. Schmey not to use sulphonal in angina pectoris and arterio-sclerosis.

There is just now great barrenness in the therapeutical novelty bazaars. Not a single new antipyretic, anæsthetic, or hypnotic has been discovered for some time. So it is well nigh time that something new should turn up, even if it is only a new use for an old friend, such as pulverized sugar, which Dr. Lorey, of Frankfurt-on-the-Main, considers the best remedy in diphtheria in existence. American physicians no longer put any faith in therapeutical recommendations coming from abroad. True, in the case of pulverized sugar the first requisite of a remedy—*ne noceat*—is well fulfilled. Dr. Lorey, who has used this remedy for nearly a year in numerous cases, is emphatic in declaring pulverized sugar the most satisfactory remedy in diphtheria. He refers to the indications of diphtheria as established by Prof. Oertel, of Munich, viz., to favor the disintegration of the false membrane and to induce copious suppuration. Both indications, Lorey says, are fulfilled by finely pulverized sugar in the most satifactory manner. The remedy is applied with an ordinary hand-ball insufflator. The sugar is blown over the tonsils, pharyngeal wall and posterior nasal cavity. After tracheotomy the sugar is of course blown through the canula. Dr. Lorey gives the following results of eighty observations of the treatment of diphtheria with pulverized sugar: 1. The duration and extent of the diphtheritic deposit are materially lessened by the application of sugar. 2. The bad odor frequently observed is not noticeable when sugar is used. 3. The mucous membranes of the tonsils and pharynx appear fresher and more highly vitalized. The membranes are lifted up and a copious mucous secretion takes place. 4. The cough is suppressed.

The favorable influence of sugar on granulations has long been known, and sugar has, therefore, often been incorporated into dressing materials of wounds. It is also said to have an analgesic and antiseptic effect. The entrance of finely pulverized sugar into the folds of the mucous membrane causes a current of juices toward the surface in order to effect the solution of the sugar. Thus bacteria are probably carried to the surface and are there rendered harmless, either by the concentrated solution of sugar or by the generation of hostile bacilli. The usual constitutional treatment of diphtheria is of course to be observed. Dr. Lorey uses also small doses of apomorphine, and iron as a tonic after the acute stage has passed.

Prof. Fürbringer has introduced to the profession a new peptone manufactured by de Weyer, of Brussels. All peptones at present in the market are far from satisfactory. Weyl's peptone has thus far been the best in use; it contains 50 per cent. of albuminose, but only 6 to 7 per cent. of genuine peptone. The preparations of Kemmerich and Koch are still inferior. The great objection to Weyl's peptone is its horrid odor and its lack of stability. Weyer's peptone contains about 20 per cent. of peptone according to its manufacturer's statement, has an agreeable taste and odor, but is rather expensive, five ounces costing fifty cents.

The profession has sustained an irreparable loss through the death of Prof. H. von Bamberger, the eminent pathologist and clinician of Vienna, known the world over through his numerous and excellent writings. He was a pupil of Rokitansky and Skoda, and began his career as an assistant to Oppolzer. In Würzburg he taught at the same time as Scanzoni, Kölliker, and Virchow. Since 1872 he has belonged to the University of Vienna. His best known work is on diseases of the heart.

A few days ago Berlin had the honor of entertaining within its walls a man who is both a prince of a royal house and an active physician; this distinguished man is Dr. Carl Theodor, Duke of Bavaria, the well-known ophthalmologist who for his charity work in his specialty is worshipped by the poor of his home districts. He spent a few days in visiting the various clinics of Berlin.

J. S.

—The daily papers state that the case of Stewart, the drug clerk in Wichita, Kansas, who was sent to prison for over 10 years and fined $20,800 for selling liquor, has been revived by the re-arrest of Stewart upon the demand of the Assistant Attorney General. Stewart was released by the Governor after serving six months of his sentence. The Attorney General attempted to collect his fine and costs—about $50,000—by selling the building in which the liquor was sold. Failing in this, he had Stewart re-arrested upon the old charge. As the man is poor, he has a good prospect of remaining years in jail, if not again released by the Executive power.

The case seems a hard one, and no doubt will arouse much misplaced sympathy, in spite of the prisoner's persistent violation of the law.

PERISCOPE.

Clinical Value of the Superficial Spinal Reflexes.

At the meeting of the Bradford Medico-Chirurgical Society, October 2, 1888, Dr. Herbert Major read a paper on the clinical value of the superficial spinal reflexes. Brief reference was first made to the reflex functions of the cord; the dependence of these reflexes on the integrity of the reflex loops consisting of afferent sensory fibres, gray substance of the cord, and efferent motor fibres; the purely spinal nature of the reactions; the frequent diffusion of the reflex excitations both in health and, especially, under certain morbid conditions in which the reflexes are exaggerated; the connections of the reflex loops on either side of the cord with the conducting tracts to and from the brain; and the normally greater activity of the reflexes in infancy and childhood than in adults. The series of cutaneous reflexes as given by Gowers and their respective reflex loops were then alluded to, attention being drawn to the statement of Gowers as to the possible absence in health of certain of the reflexes, especially the gluteal, lumbar, and sometimes the cremasteric; so that, he said, it is not to be inferred, from the absence of such reflexes alone, that the reflex pathway through the cord is impaired. Reference was next made to the views of other neurologists with respect to the relative constancy of these reflexes in health, as showing, probably, a further degree of normal irregularity in their occurrence than had been allowed by Gowers; and the opinion was expressed that such further limitations are necessary. The importance of a correct and fully adequate estimate of possible normal variations is evident. The modifications of the cutaneous reflexes in disorders of the nervous system were then considered. The facts were recalled that in cerebral paralysis the reflexes are lowered on the paralyzed side, probably as the result of irritation in the affected hemisphere of the brain; that they are liable to be excessive in diseases of the motor paths from the brain which diminish the cerebral control; and that they are lowered or abolished in affections involving impairment or destruction of any portion of the reflex loops, and consequent interruption of the reflex pathway. With respect to the reliableness of the superficial reflexes in diagnosis, stress was laid on the possible occurrence of disease of the cord outside the reflex loops, and, therefore, unindicated by reflex changes; on the frequent normal absence of the reflexes in the adult; in the occurrence of impairment only in reflexes, slight in degree possibly, and difficult of appreciation; and in the fact that, given an altered state of the reflex, the position of the lesion in the course of the reflex loops remains to be determined. On such grounds it was urged that no attempt should be made, in any case, to rely solely or mainly on any apparent irregularities in these reflexes, but only to utilize them with, and in subordination to, other evidence. Possibly their practical value in diagnosis, he said, has been over-estimated by others; but if this precaution is taken, and the precise significance of the reflexes duly borne in mind, they would be found of assistance in a certain proportion of cases; or, failing to assist, they would not, at least, lead into error.—*Medical Press and Circular*, Oct. 31, 1888.

Prevention of Chronic Joint-Disease in Children.

Dr. Leroy W. Hubbard makes the following suggestions as to the prevention of chronic joint-disease in children, in a communication to the *Medical Record*, November 10, 1888:

1. A careful inquiry by the surgeon into the hereditary history of each family which he may have charge of; and if a well-marked history of hereditary disease, especially tuberculosis, is found, a warning should be given to the parents of the dangers to which the children are exposed.

2. Instruction in regard to hygiene, diet, etc., with the endeavor to keep the nutrition of the children up to the highest point until they have passed the period at which they are most liable to contract a joint-lesion, viz., the period of puberty.

3. When tuberculosis is present in a family, either as phthisis pulmonalis, or as a joint lesion with an abscess, all sputa or discharges should be destroyed or disinfected; and healthy children should be brought as little as possible in contact with the sick. In this way the risk of direct contagion may be reduced to a minimum.

4. Instruction should be given in regard to the importance of any traumatism of a joint or the parts near it, however slight it may be. After such an injury, absolute rest of the joint should be insisted upon until all evidence of inflammation has subsided

and the function of the part is perfectly restored.

5. The prohibition of all sports or exercises which bring repeated traumatism upon one joint. Young children should not be allowed to go up and down stairs frequently.

6. After one of the acute exanthematous fevers, a considerable period should elapse before active exercise, such as running, jumping, or long walks, is allowed.

Poisoning with Nitrobenzol.

Dr. R. P. Rostoshinsky, of Tambov, records (*Proceedings of the Tambov Medical Society*, 1888, No. 7, p. 209) the case of a soap-boiler's cook, 53 years old, who, when looking about for spirits in her master's absence, came across a flask with nitrobenzene. Having found its *bouquet* very pleasant, and mistaking the fluid for some "fine sort of wine," she swallowed a large dose of it, and, a few hours later, was found lying unconscious on the kitchen floor. She was at once sent to a hospital. On admission, she was in a deep comatose state, pulseless, extremely cyanotic, "deadly-cold"; the respirations were few, labored, stertorous; the jaws spasmodically closed, the pupils dilated; the breath smelt of bitter almonds, the fingers and forearms were rigidly flexed, and the skin anæsthetic. Under the influence of analeptics (tincture of valerian under the skin, frictions, ammonia, etc.), the pulse returned. An attempt at washing out the stomach was made, but given up at once in view of a sudden arrest both of the pulse and of the breathing. After artificial respiration was kept up for one and a half hours, and repeated injections of valerian and musk had been given, the patient gradually recovered her pulse and breathing, and at the same time fell into a condition of high excitement with delirium. She began to shout and loudly moan, to toss about and struggle against everybody and everything. Several hours later, however, she became more quiet and able rationally to answer questions, and as rationally to lie: she denied having taken anything in particular, and said she had fallen ill from charcoal fumes. She complained of headache and abdominal pain; her speech was thick, the pulse accelerated and intermittent. Though she passed a good night, on the next day there were still present great prostration and considerable cyanosis. On the third day, fever (temperature 102.4°) set in, and lasted for six days, the temperature sometimes rising as high as 104.5°. Following the woman's request, the author discharged her on the ninth day, though her state was still rather weak.

Dr. Rostoshinsky draws attention to the following points. 1. Nitrobenzene is poison causing asphyxia—that is, a poison which acts first on the red blood corpuscles, destroying their property of absorbing oxygen (partly from the formation of aniline, as Letheby thinks, partly from the action of NO_2, as E. Pelikan states). 2. The respiration is affected before the cardiac action. 3. The nervous phenomena are of a secondary nature, and depend upon a disturbance in nutrition of the nervous system, arising from an abnormal composition of the blood. 4. Cases of poisoning by nitrobenzol are relatively rare. The above case is only a second one at Tambov. The first—a fatal one—was published by Drs. I. P. Poteschin and S. K. Olenin in 1871 (*Proceedings of the Tambov Medical Society*, 1871, No. 8). The Russian literature contains a series of works on the toxicology of benzene and its derivatives, the more important being the researches of E. Pelikan, Marlygin, Werner, Bogdanoff, Starkib, etc.

Pathological Anatomy of Addison's Disease.

Dr. Von Kalden, in a paper entitled "A Contribution to the Pathological Anatomy of Addison's Disease" (*Virchow's Archiv*, Band xiv, Heft 1, October, 1888), gives the following results of his study of the skin in two cases of Addison's disease: 1. The deposit of pigment in Addison's disease takes place in the deeper layers of the rete Malpighi, and in the outer layers of the epithelial cells of the hairy skin corresponding to them. 2. The pigment is not formed in these cells, but in the cutis, and from thence is carried by wandering cells to the place of deposit. 3. Every epithelial cell takes up the pigment from several such wandering cells. 4. Both the principles of general pathology and the relative position of the wandering pigment-cells and the blood-vessels make a blood-origin of the pigment probable. 5. But this origin is not in a disease of the vessel wall, and still less in hemorrhage, as such findings are not constant, and if generally present, are of a secondary nature. 6. An accurate investigation of the mucous membrane in further cases coming under observation promises, perhaps, further disclosures concerning the relation of the pigment to the coloring matter of the blood.

THE
MEDICAL AND SURGICAL
REPORTER.

ISSUED EVERY SATURDAY.

CHARLES W. DULLES, M.D.,
EDITOR AND PUBLISHER.

The Terms of Subscription to the serial publications of this office are as follows, payable in advance:

Med. and Surg. Reporter (weekly), a year, $5.00
Quarterly Compendium of Med. Science, - 2.50
Reporter and Compendium, - - - - 6.00
Physician's Daily Pocket Record, - - 1.00
Reporter and Pocket Record, - - - - 6.00
Reporter, Compendium, and Pocket Record, 7.00

All checks and postal orders should be drawn to order of

CHARLES W. DULLES,
N. E. Cor. 13th and Walnut Streets,
P. O. Box 843. Philadelphia, Pa.

☞SUGGESTIONS TO SUBSCRIBERS:
See that your address-label gives the date to which your subscription is paid.
In requesting a change of address, give the old address as well as the new one.
If your REPORTER does not reach you promptly and regularly, notify the publisher *at once*, so that the cause may be discovered and corrected.

☞SUGGESTIONS TO CONTRIBUTORS AND CORRESPONDENTS:
Write in ink.
Write on one side of paper only.
Write on paper of the size usually used for letters.
Make as few paragraphs as possible. Punctuate carefully. Do not abbreviate, or omit words like "the," and "a," or "an."
Make communications as short as possible.
NEVER ROLL A MANUSCRIPT! Try to get an envelope or wrapper which will fit it.
When it is desired to call our attention to something in a newspaper, mark the passage boldly with a colored pencil, and write on the wrapper "Marked copy." Unless this is done, newspapers are not looked at.
The Editor will be glad to get medical news, but it is important that brevity and actual interest shall characterize communications intended for publication.

PHYSICIANS AND NEWSPAPER ADVERTISING.

The daily papers of Philadelphia, about December 10, contained an item stating that a member of the Luzerne County Medical Society had been expelled for advertising himself in the newspapers as a specialist; and one of these papers, whose idea of the proper scope of advertising may be measured by the fact that it has repeatedly given a prominent place to sensational reports of the joy of those who had drawn prizes in the Louisiana State Lottery, was very severe in its denunciation of the action of the Luzerne County Society.

As the case undoubtedly merits discussion, we have carefully investigated it, and will lay the facts before the readers of the REPORTER, with certain comments which we believe to be warranted by the circumstances.

A physician, while a member of the Luzerne County Medical Society, inserted a card in several of the county papers stating that his practice was "limited to the Eye, Ear, Throat and Nose," and that he would be, on certain days, at certain towns. After this he tendered his resignation to the Society. The resignation was referred to the Censors, who reported, in part, as follows:

"It is not necessary for us to enter into any details as to the character of the infringements of the Code of Ethics and of the methods customary in the profession, which Dr. —— admits that he permitted himself to indulge in *before* his offer of resignation and in which he has persisted up to the present time, while still formally a member of the Society. No action having been taken upon his resignation, his connection with the Society cannot, of course, be severed without its consent.

"We do not consider Dr. ——'s excuses for his violation of the laws and precepts of the only code of which we have any knowledge, to be valid: we recommend that the Society decline to accept his resignation and that his name be expunged from a list of its members."

This report was signed by all three members of the Board of Censors, and the recommendation was adopted by the Society without dissent.

From this it will be seen that the Luzerne County Society did only what any society might properly do to a member whose impatience to follow his inclinations was so great that he could not wait until he had been released from his voluntary pledge to abide by its rules. The case, then, was not primarily one of medical ethics, but rather of insubordination on the one hand and of a dignified assertion of authority on the

other, in which the Luzerne County Society was undoubtedly in the right.

But, in addition to the question of discipline involved, the specific offense charged —and admitted—deserves notice.

Newspaper advertising by medical men is condemned by the Code of Ethics, to support which all the Societies in affiliation with the American Medical Association are pledged. Besides this, the general sentiment of the civilized world is opposed to this form of competition among physicians, for the sufficient reason that its natural tendency would be to make the practice of medicine more mercantile than is consistent with its dignity. As a mere matter of morals, no one can question the right of any man to announce his occupation and his address, or even to state—as merchants constantly do—his opinion of the superiority of what he offers to the community or of its cheapness; but members of a liberal profession cannot do this without degrading it, and those who defy the general opinion in this respect must expect the disapproval of all who desire to see the dignity of the profession maintained.

It is to be regretted that newspaper advertising is not uncommon in certain parts of the United States; but it is to be hoped that it will disappear with the conditions which have given rise to it, and that, before long, medical men everywhere will restrict themselves to those unpretentious methods of securing practice which are most consistent with self-respect, and most likely to win the respect of the community.

AN IMPORTANT DECISION.

A decision of much importance to physicians was recently delivered in the Orphans' Court of Philadelphia, by Hon. Wm. N. Ashman, and is reported in the *Legal Intelligencer*, Dec. 7, 1888. A gentleman living in the city was attacked with a disorder of the brain, and in the absence of his family physician another medical man was called, by the business partner of the patient, to attend him. The medical man, feeling that additional counsel would be of advantage to his patient, asked and secured the professional services of Dr. William Hunt. After three weeks' illness the patient died, and payment of Dr. Hunt's bill for professional services was refused, on the ground that he had not been employed by the patient individually, and that the physician who engaged Dr. Hunt had no authority in law to do so.

Dr. Hunt then brought suit to recover and his case was argued by Wm. C. Hannis, Esq., whose presentation of it led to a unanimous judgment of the Court in favor of Dr. Hunt, which was delivered by Judge Ashman. The opinion makes it clear that a physician may recover for his professional services when he has been called in by an accredited agent, or even by a self-constituted agent, when his own conduct, or the act of God, makes such a summons necessary for his own preservation or for the well-being of society.

The particular question involved in this case was, whether or not a physician attending a patient unable to decide what was best for himself was authorized to call in another physician to aid him in treating the patient. This question the Court answers in the affirmative. After stating the rule which governs the conduct of agents in general, Judge Ashman says: "The spirit in which this rule is to be expounded should be in unison with the character of the relations which the parties have themselves established with each other, and should be liberal just in proportion as those relations become more intimate and involve delicate questions of duty and responsibility. To say that the discretion to act promptly in an emergency, which a patient necessarily gives to his physician, is larger than that which a merchant gives to his drayman, is simply to say that a man will resign more of his own authority to the will of the person who is to save his life, than to that of the person who is to take care of his trunks. The trust,

which includes the power for its exercise with which the patient vests his physician, is often practically unlimited, because it may require to be executed at a time when disease has taken away all ability to restrict it. The patient is not to be left to die, on the plea that during such an interval no act of his adviser can be valid, for want of his direct approval. Or the doctor may suspect the presence of an obscure disease, which, if it exists, demands heroic treatment. To communicate the suspicion to the sick man will probably finish him on the spot; may he not solve the doubt by consulting a specialist?"

In defining the mental condition which would justify a physician in acting as agent for his patient, in calling a consultation, Judge Ashman adds: "It is not necessary, for the purposes of this argument, that the decedent should answer to the legal definition of a lunatic. If he was so far mentally disabled as to be unfitted for the proper conduct of his affairs, it was sufficient to justify the action of the claimant. We do not mean to displace the rule of liability from its footing of strict necessity. The burden of proof that in the absence of an express contract, an implied contract has arisen from the exigencies of the case, must always rest upon the claimant. That burden was fully met in the case referred; and the claim of Dr. Hunt was allowed."

The fact that this decision was delivered by a Judge who is exceptionally conversant with the legal and equitable principles which should govern the relations between physicians and their patients, leaves no room for doubt that it will establish a precedent of great value to medical men.

VISITING NURSE SOCIETY.

There is an institution in Philadelphia which, under the name of the Visiting Nurse Society, undertakes a work that cannot fail of being a great convenience to physicians and a great blessing to a certain class of patients. The object of the Society is to provide good home-nursing for those whose means are too limited to permit them to pay full price for trained nurses, and who are not strictly hospital patients. For such persons it provides gratuitous nursing, though any sum which the patients feel able to pay is accepted as assisting the Society further to prosecute its labors, and as contributing to the self-respect of the beneficiaries. The aid of the Society is extended only to patients under the treatment of a physician. Suitable nurses for surgical, obsterical and medical work are furnished, and emergency calls are received at any time during the twenty-four hours, and answered as promptly as possible.

The field of usefulness open to an association of this kind in a large city is very extensive. Anyone who has had much experience with the poor, even with patients whose means are merely limited, must often have met with cases in which it would have been of incalculable advantage to have had the temporary presence of an intelligent and kindly woman, to assist him in his work, or to supplement it.

It is pleasant, therefore, to be able to call attention to the Society which in Philadelphia undertakes to supply this need, and to commend its example to the imitation of other cities which are not so favored.

FOOD ADULTERATION.

We are glad to call attention to the fact that a comprehensive bill will be presented at the next session of the Legislature of the State of Pennsylvania to prevent fraud and adulteration in the preparation and sale of food. The bill has been prepared by the American Society for Preventing the Adulteration of Food, and provides for the establishment of a Bureau of Adulteration at Harrisburg in connection with the State Board of Health.

The chief officer is to be supplied with a chemical laboratory, and shall appoint a force of Inspectors and clerks, the Inspectors being duly qualified graduates of medi-

cine. The expenses of the Bureau are not to exceed $15,000 per year.

Inspectors will be required to visit breweries, bakeries, dairies, factories, markets, and stores where either food or medicines are prepared or sold, and to obtain samples for analysis. The bill describes what comprises food adulteration in specific instances, and provides a penalty of fine or imprisonment, for violation of the law.

Such a bill should have the support of all medical men as well as of all good citizens. It is exactly in the line of our Editorial on "The Need for Public Analysts" in the REPORTER, March 3, 1888, and we hope that the suggestions there made will not be overlooked in perfecting the proposed bill.

CHILD-BIRTH AFTER EXCISION OF THE RECTUM.

In the REPORTER, February 18, 1888, we gave a description of the method proposed by Prof. Kraske, of Freiburg, for the removal of cancer of the rectum, and referred to the excellent results he had obtained by it in a series of eight cases. An interesting sequel to an operation of this sort is reported by Dr. Lihotzky in the *Wiener med. Presse*, Nov. 18, 1888. The patient was a woman who was operated upon last year according to Kraske's method by Dr. Hochenegg, and who on Oct. 26, 1888, gave birth to a child, under the care of Prof. Breisky. In the absence of a considerable portion of the posterior wall of the pelvis, and because the levator ani and the ligamentous structures at the outlet of the pelvis had been divided, it was expected that the delivery would be irregular. But the expectation was not fulfilled. The delivery was perfectly normal.

This result suggests incidentally some very interesting reflections in regard to the mechanism of labor; but its chief interest lies in the demonstration that such perfect functional results may follow an operation of such gravity and extent as Kraske's operation of excision of the rectum for cancer.

PAMPHLET NOTICES.

[Any reader of the REPORTER who desires a copy of a pamphlet noticed in these columns will doubtless secure it by addressing the author with a request stating where the notice was seen and *enclosing a postage-stamp.*]

164. FIRST CONTRIBUTION TO THE STUDY OF FOLK-LORE OF PHILADELPHIA AND ITS VICINITY. By HENRY PHILLIPS, JR., Philadelphia. From the *Transactions of the American Philosophical Society*, March 16, 1888. 12 pages.

165. THE PALATAL RUGÆ IN MAN. By HARRISON ALLEN, M.D., Philadelphia. From the *Proceedings of the Academy of Natural Sciences, Philadelphia*, September 25, 1888. 19 pages.

166. UEBER NATUR UND BEHANDLUNG DES FURUNKELS BESONDERS IM AEUSSEREN OHRE. VON DR. B. LOEWENBERG, Paris. From the *Deutsche med. Wochenschrift.*

164. Mr. Phillips's pamphlet contains one hundred and twenty-two popular sayings, in rhyme or prose, embodying certain beliefs which fall under the general head of superstition. Some of these have a bearing upon medical experience, as, for example, that "fasting spittle will cure a sore eye"; and that "a horse-chestnut carried in the pocket will cure piles"; and many of them will prove very amusing, we fancy, to those who have often acted upon them, but who never expected to see them in print.

165. With his usual thoroughness Dr. Allen has studied a subject which would be unlikely to attract the attention of one less habituated to accurate scientific observation, and has deduced from his study conclusions of a very practical nature. The form and distribution of the rugæ of the hard palate in man would probably be regarded by most medical men as matters of little consequence, and they will be surprised to learn that they may serve as a means of identification of individuals, and that they furnish indications of the existence of certain constitutional diseases, as well as of predisposition to nasal catarrh.

Dr. Allen's pamphlet is of special interest to the student of animal morphology, and suggests lines of investigation in pathology which few, we believe, would suspect who have not made themselves acquainted with its contents.

166. Dr. Loewenberg is a believer in the parasitic origin of boils, and attributes their multiplication in the same individual to auto-infection. He also believes that they are contagious. As a consequence he opposes the method of treating them which consists in the application of poultices and making incisions into them, and recommends the local application of a saturated solution of boric acid in alcohol. For boils in the wall of the meatus of the ear, he aids the application of the parasiticide by a previous light scratching of the epithelium with a heated needle. This method is painless, and much preferable in his opinion to incising the inflamed and exceedingly sensitive tissues.

His pamphlet is very interesting, and presents a very hopeful view of the management of this troublesome affection.

—The Hoagland Laboratory in Brooklyn was opened December 15 with an address by Prof. H. Newell Martin, of Johns Hopkins University, Baltimore.

CORRESPONDENCE.

Apostoli's Treatment of Fibroid Tumors of the Uterus.

To the Editor.

Sir: In the Reporter for Dec. 1, 1888, your reviewer of the American System of Gynecology, vol. ii, takes me to task in the following paragraph:

"Sutton gives a good exposition of the subject of Non-Malignant Tumors of the Uterus. We cannot consider the section on treatment, however, as complete. The statistics of the results of operative methods are only brought up to '82–'84, and no mention is made of Thomas Keith's changed views as to the justifiability of hysterectomy. No opinion is expressed as to the value of electrolysis in the treatment of fibroids; we are simply referred to the article by Rockwell in Vol. I. The author concludes that fibro-cystic tumors should be removed, but not necessarily the solid tumors; that removal of the uterine appendages for fibroid tumor is unjustifiable when the tumor can be removed per vaginam; that removal of the appendages is especially indicated in small non-cystic fibroids; that probably 29 out of 30 cases should not be operated upon, as the symptoms do not justify operation. These views are sound, but we believe that the indications for electrolysis should have been defined."

In writing for a text-book it was my aim to give that which I knew to be "sound" and to omit anything doubtful or still on trial. Apostoli's method is still on trial. I myself am at it. Concerning this method I am convinced of several things. On the affirmative side, that it will arrest the hemorrhages; reduce the size of the uterus; if in doing the latter the blood supply to the tumor is partially cut off, it will reduce the tumor to some degree. On the negative side, that electrolysis in the tissues of the tumor and consequent reduction is all rot; that the method is not free from danger; that it opens up an immense field for quackery, only equalled by Bergeon's treatment for consumption; that the fact that subperitoneal fibroids are not affected by the treatment is against its specific claim; that it is a painful treatment, and that all that it accomplishes may be accomplished by less dangerous and less painful means. If I am mistaken in these conclusions I will discover it, for the reason that I try things for myself before I advise my readers in reference to them finally. Again in 1887, in New York, Dr. Apostoli told me, in the presence of Dr. Bantock of London, that he had never cured a fibroid tumor by electrolysis. It is a curious thing to me that while the master fails to cure, his pupils succeed. I am not disposed at present to condemn this method, but I am quite sure that if becomes too public property, that it will kill more than hysterectomy has ever killed. Every tyro may try Apostoli's method, but not hysterectomy more than a time or two.

The method bids fair to be profitable to the doctors, if not to the patients, who will as a rule find the good done very ephemeral. But, as I have already said, it is on trial and I have had no accidents with it, great or small, and I have already said on the affirmative side my convictions as to its merits, and on the negative as to its demerits. I hold that my article in Vol. ii, on the treatment of Fibroid Tumors of the Uterus, can be depended upon by those who favor the work by a study of my article. If my reviewer will take that article for his guidance he will not go far wrong in the next.

Yours truly,

R. Stansbury Sutton, M.D.

419 Penn Ave.,
Pittsburgh, Pa.,
Dec. 10, 1888.

Portland Powders.

To the Editor.

Sir: Could you state in the Reporter (1) the composition of the remedy for rheumatism or gout, known as "*Portland powders*," and (2) the reasons which may be given for considering it a dangerous remedy.

Also (3) the formula for the remedy widely known as "*Velpeau's compound.*" Concerning this latter I wish to learn the entire formulæ as I understand there is at least one formula for medicine to be taken internally, besides the injection. I have questioned several physicians of long experience in medical practice for information concerning these prescriptions without avail.

Yours truly,

G. M. Foskett, M.D.

North Dana, Mass.,
Nov. 20, 1888.

[1. "Portland powder" according to the original prescription was made of equal parts of the roots of Aristolochia rotunda, and gentiana lutea, of the tops and leaves of tencrium chamædrys and erythræa centaurium, and of the leaves of ajuga chamæpitys.

2. There is no reason at all why it should be considered in any proper sense of the term "a dangerous remedy."

3. Do not know.—Editor of Reporter.]

Multiple Congenital Herniæ.

To the Editor.

Sir: Aug. 5, 1888, I was called to attend Mrs. B., an Italian primipara. Her labor was normal, but tedious. After ligature of the funis, I made my usual examination of the child for deformities, and was surprised to discover a right and left inguinal, a right ventral, and a *dorsal* hernia—the latter extending from about the seventh rib to the crest of the ilium. Opposite this, and in the middle of the spinal column, was an ulcer, about four inches in diameter, and of a light grayish color. In addition to the above, there was talipes varus of both feet. The ulcer healed rapidly. The child, except for its deformities, is now well and hearty. Yours truly,

Frank Post Butler, M.D.

What Cheer, Iowa,
Dec. 4, 1888.

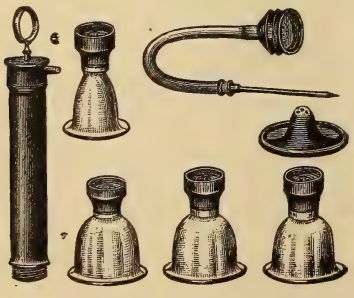
New Instruments.

Any instrument or apparatus sent to the Editor of the Reporter for notice will be treated like a book sent for review. Illustrations suited to our columns will be published with the notice, if cuts accompany the instrument.

Dr. W. S. & F. Black's Cupping Apparatus, Breast-Pump, Aspirator and Stomach-Pump.

Price $10.00.

This is a very convenient instrument, simple in construction, and efficient in action. It may be used as a cupping apparatus, as an aspirator, or a breast-pump, or



as a stomach-pump. The barrel and piston are made of hard rubber, the cups being of glass. The valves act automatically. The capacity of the syringe barrel is about f℥iij. Its action is smooth and easy, and we believe it is calculated to be of great service to physicians, and especially to men practising medicine in the country.

Notes and Comments.

Therapeutic Value of Lipanin.

Lipanin, which was described in an Editorial in the Reporter, March 10, p. 311, has received further study at the hands of Dr. O. Hauser, who publishes a communication on the subject in the *Zeitschrift für klin. Medicin*, Band xiii, Heft 5, 6. We learn from an abstract of his article in the *Wiener med. Presse*, Nov. 4, 1888, that lipanin resembles in appearance very closely the yellow unpurified cod liver oil, but is without the disadvantages of the latter. It was employed by Hauser in 38 children, varying in age from fifteen months to thirteen and a half years, and suffering with disturbed nutrition, rickets, anæmia, scrofula, and tuberculosis. In the greatest number of cases the lipanin was taken willingly without any addition to it, and was well borne. Disturbances in digestion, such as are present when cod liver oil is given, were never observed. Moreover, it could be taken continuously during the hot season. In all the cases in which this was to be expected, an increase in weight occurred. It is almost completely absorbed and appropriated. It is used in about the same dose as cod liver oil, and can be combined with other medicaments, such as creasote, menthol, phosphorus, etc.

Naphthol Bandages.

Prof. J. L. Reverdin has described his experiments with bandages impregnated with β-naphthol. He was incited to try it by Bouchard, who recommended β-naphthol in the disinfection of the intestinal canal as an agent but very slightly poisonous. Reverdin employed the naphthol as a powder, which he dusted upon wounds, and as a ten to fifteen per cent. gauze. The latter was first sterilized at a temperature of 130° C. (266° F.) and then impregnated with an ethereal solution of naphthol. He has employed the naphthol bandages in 38 operations, of which 18 were cases of tumor-extirpation, 4 were amputations, 1 was a laparotomy, 3 were radical operations for hydrocele, etc. In 23 cases primary union was obtained without a trace of suppuration even at the opening for drainage; in 12 cases there was delayed primary union; and in 3 cases suppuration occurred as the result of some mistake in the technique of the operation.—*Wiener med. Presse*, Nov. 4, 1888.

Vocal Music and Prevention of Phthisis.

At the meeting of the Medical Society of Virginia, Oct. 23, 1888, Dr. C. E. Busey, of Lynchburg, Va., read a paper on the cultivation of vocal music in schools as one of the means of preventing phthisis. He states it as a well-known fact that those nations which are given to the cultivation of vocal music are strong vigorous races, with broad expansive chests. If an hour a day in public schools were devoted to the development of vocal music, there would not be the sad spectacle of the drooping, withered, hollow-chested, round-shouldered children which confronts us now. There is too great a tendency to sacrifice physical health upon the altar of learning. Vocal music is gymnastic exercise of the lungs, producing increased expansion of the lung tissue itself. The lungs in improved breeds of cattle, which naturally take little exercise and are domiciled much of the time, are considerably reduced in size, when compared with those animals running at liberty; and so it is with the human beings who lead inactive lives. Phthisis generally begins at the apices of the lungs because these parts are more inactive, and because the bronchial tubes are so arranged that they carry the inspired air with greater facility to the bases than to the apices. During inactivity a person will ordinarily breathe about 480 cubic inches of air per minute. If he will walk at the rate of six (*sic*) miles an hour, he will breathe 3,260 cubic inches. In singing, this increases more than in walking, as singing well requires all of the capacity of the lungs. The instructor of vocal music, in addition to his musical education, should understand the anatomy and physiology of the respiratory organs.—*Virginia Medical Monthly*, Nov., 1888.

Extirpation of the Rectum.

At the last meeting of the Imperial-Royal Medical Society of Vienna, Dr. Ullmann showed a case in which he had performed extirpation of the rectum after the method of Kraske. On her admission into the clinic of Prof. Albert, the patient stated that she suffered from severe pains during evacuation of the bowels; and she noticed that the feces were mixed with pus and blood. Examination showed the presence of a circular ulcerating carcinoma at a distance of ten centimetres (about 3¾ inches) upward of the anus. Some days after admission colotomy had to be resorted to, owing to very threatening symptoms of ileus. Later on, extirpation of the rectum was performed, after the method of Kraske, of Freiburg. Starting from the middle of the os sacrum two sections were made, which encompassed the whole orifice of the anus; after extirpation of the coccyx, and resection of the os sacrum, the rectum was divided upward, and the end of the rectum was sutured into the posterior angle of the wound. The patient recovered in a short time, and the weight of her body increased by ten kilogrammes within two months after operation.—*Medical Press and Circular*, Nov. 21, 1888.

Poisoning with Chlorate of Potash.

In number 41 of the *Deutsche med. Wochenschrift*, Dr. Bernard Schuchardt records three cases of fatal poisoning with chlorate of potash: one observed by Dr. Mendelsohn, of Berlin, and one seen by Dr. Sabarth, of Lötzen, in which the potash was taken with suicidal intent. The first patient died in fourteen hours after being received into the hospital; the second in twenty-six hours after taking the poison. The third case was observed by Dr. Lacassagne, of Lyons. The patient was a woman who was given chlorate of potash in order to produce an abortion.

Foreign Body in the Ear.

A unique case, says the *Weekly Med. Review*, Nov. 17, 1888, occurred in the practice of Dr. William Caston, of Corsicana, Tex. A child, three years of age, the daughter of an intelligent general practitioner, had a discharge from the right ear for two months. The father of the child had treated the ear by syringing it out with warm water and blowing powdered boracic acid into the canal.

When the little patient was brought under Dr. Caston's care, he cleansed the auditory canal and on examination found a hole in the drum membrane, of the size of about one-third the surface of the membrane. The syringe was again used in order to cleanse the middle ear, and a small lump was brought away which was found to be the shell of a house-fly covered with pus. The fact that the soft parts of the fly had been dissolved indicated that it had remained in the middle ear cavity for some length of time. Dr. Caston dried the ear, blew in equal parts of iodol and boracic acid, and the discharge ceased from that day. The opening in the drum membrane closed and the hearing was soon restored to normal.

Prognosis in Neurasthenia.

Dr. Landon Carter Gray, in a communication published in the *N. Y. Med. Journal*, Oct. 20, 1888, states with regard to the prognosis in neurasthenia that it is variable in each of the forms. The purely reflex form will end in recovery, as a rule, when the reflected cause is removed. The lithæmic form will vary in prognosis according to the severity of the nervous symptoms and the time of the year when the first symptoms show themselves. If the nervous symptoms are slight, the recovery is usually speedy. If the nervous symptoms are severe, and especially if the vertigo is marked, the duration of the disease may be prolonged through a year, even with treatment, and the vertigo may last several years. Relapses are not infrequent. Warm weather, he says, has a markedly unfavorable influence upon the nervous symptoms—so much so that he has never known severe nervous symptoms, beginning in the spring or early summer, to disappear until cold weather made its appearance. The simple form of neurasthenia, he states, has usually an excellent prognosis if radical treatment is adopted; otherwise recovery is a matter of chance, and he has known cases which he believed to be of this form pass into a gradual and fatal exhaustion. Dr. Webber states that marked disturbance of the arterial tension is of evil prognosis, and *vice versâ;* but Dr. Gray has not as yet been able to test this point himself.

Supposed Case of Hydrophobia.

A boy named Joseph Stephenson, aged 12 years, died on December 12, 1888, from supposed hydrophobia. On October 24, the boy saw a dog lying on a neighbor's door-step and walked up and patted it. The dog then snapped at the boy and bit him on the lip and cheek. The boy was taken to a neighboring drug-store, where the wound was immediately cauterized with nitrate of silver, and the boy went home.

Two days later, Dr. Thomas S. Sozinskey was called in, and found Stephenson's face much swollen and the wounds inflamed. Under treatment the boy apparently became well, the wounds having healed in about ten days. On Dec. 9, he became sick, restless and feverish, and on Dec. 12, when Dr. Sozinskey saw him again, Stephenson was suffering from fever and was excitable.

At this time the symptoms, the doctor said, pointed decidedly to hydrophobia, and they became more marked as the day advanced. That evening the boy was in a violent state of feverish excitement, he frothed at the mouth, and had desperate spells of asphyxia, during one of which he died.

All efforts to find the dog, or to ascertain whether it was suffering from rabies at the time it bit the boy, have been unavailing.

In investigating the case it was learned from the boy's brother, who saw the biting, that immediately afterward some men drove the boy away from them saying that he would have hydrophobia, and that if he bit them they would go mad too.

Experiments With Creolin.

Michael Pleskoff communicates to the *Therapeutische Monatshefte* some therapeutic experiments with creolin, which he made in the wards of Prof. Jurasz, in Heidelberg, in cases of chronic rhinitis, ozæna, and dry pharyngitis. He made use exclusively of a one per cent. watery solution of creolin and employed it in 15 cases. The results obtained were so favorable that the author most warmly commends it for further trial. In chronic rhinitis with or without fetor, tampons of cotton were dipped in the creolin solution, very gently squeezed out, and introduced deep into each nasal chamber by means of a sound. The tampons were allowed to remain about twenty minutes. During this time the patients felt a slight burning, which, however, soon passed away upon removal of the tampon. Unpleasant symptoms were never observed. The favorable effect of the creolin showed itself in a comparatively short time by the qualitative and quantitative change in the secretion. The quantity of the discharge diminished and its purulent character gave place to a more normal secretion of mucus. It exercised an especially good influence upon the troubles present in ozæna. It caused the disappearance of fetor more quickly and completely than had been effected with carbolic acid. Formation of crusts also ceased, and the secretion of the mucous membrane became normal. The results were not less favorable in the so-called dry pharyngitis, in which affection the tampons were pushed through the nose to the nasal fossæ, so that, by hanging down, they came in contact with the mucous membrane of the pharynx. The rest of the mucous membrane of the pharynx was swabbed with a pledget of cotton wet with creolin solution, and held in place with forceps.—*Wiener med. Presse*, Nov. 4, 1888.

On Special Service.

Very nearly twenty years ago a brilliantly aggressive member of the Massachusetts Medical Society asserted that specialists were the officers, and general practitioners the rank and file, of the profession. This sentiment was by no means heartily re-echoed at the time, the medical specialist being then a comparative rarity, and the "rank and file" largely in the majority. Nor has this assertion, it is safe to say, found more favor in the later years, although the specialists have greatly increased in number; for, with the subdivision of labor, and the exploration of hitherto comparatively unknown regions of research, there has come a sense of interdependence and community of interest, which is a most valuable and wholesome thing in either an army or a brotherhood, and from which springs naturally an appreciation of the necessity for community of knowledge.

To carry out the military simile in another form, while the general practitioners constitute the main body and strength of an army, the officers of which are all promoted from the ranks, the specialists form a skirmish line of volunteers going out in different directions to explore, to gather information, and, most important sequence, to report back to the main body the line upon which it may, after corroborative investigation, advance with safety.

One of the duties, therefore, of the specialist, and particularly of the specialist with material for investigation at his hand, is *to investigate;* and another of his duties is *to teach*, in so far as the gift of teaching has been given him, and to report as simply and as plainly as he can what he has learned; since the knowledge which he has acquired is not his, but is held in trust as the property of the main body of which he is one of the rank and file on special service.—*Boston Med. and Surg. Journal*, Nov. 22, 1888.

Army Medical Board.

An Army Medical Board will be in session in New York City, N. Y., from May 1 to 31, 1889, for the examination of candidates for appointment in the Medical Corps of the United States Army, to fill existing vacancies.

Persons desiring to present themselves for examination by the Board will make application for the necessary invitation to the Secretary of War, before April 1, 1889, stating the place of birth, place and State of permanent residence, and enclosing certificates based on personal knowledge from at least two persons of repute, as to American citizenship, character and moral habits. Testimonials as to professional standing, from Professors of the Medical College from which the applicant graduated, and of service in hospital from the authorities thereof, are also desirable. The candidate must be between 21 and 28 years of age, and a graduate from a *Regular Medical College*, evidence of which, his diploma, must be submitted to the Board.

Further information regarding the examinations and their nature may be obtained by addressing the Surgeon General, U. S. Army, Washington, D. C.

JOHN MOORE,
Surgeon General U. S. Army.

An Alumni Association of the University of Pennsylvania.

The graduates of the University of Pennsylvania residing in Maryland and the District of Columbia held a meeting December 14, and formed an association to be known as the University of Pennsylvania Alumni Association of Maryland and the District of Columbia. The association starts with a membership of 110, of whom 36 reside in Washington, 31 in Baltimore, and 43 in Maryland, outside of Baltimore. Dr. W. W. Johnston was elected President; Dr. R. Lorini, Secretary. The Faculties and the Board of Trustees of the University were represented at the meeting by prominent alumni from Philadelphia.

Philadelphia Polyclinic.

The Philadelphia Polyclinic is about to inaugurate a three months' Special Course in Ophthalmology, adapted to the needs of physicians who desire to pay special attention to ophthalmic practice. It will include systematic didactic instruction and quizzing, with three hours of clinical work daily. With the demand that exists for this kind of instruction, and the facilities this institution can offer, the course can be strongly recommended to physicians.

Association of Ex-Residents of the Pennsylvania Hospital.

The fourth annual meeting of this Association will be held in the Pennsylvania Hospital on Thursday, December 27, 1888, at 8 P.M. After a brief business meeting there will be a social reception and entertainment to renew and revive old friendships.

NEWS.

—Prof. Rummo, of Naples, editor of the *Riforma Medica*, has been appointed Professor of Clinical Medicine in the University of Sienna.

—Dr. Charles L. Minster died in Philadelphia December 14, it is supposed from the effects of an overdose of morphine, taken for the relief of pain.

—Dr. Henry F. Formad has resigned the position of Demonstrator of Morbid Anatomy and Pathological Histology, in the University of Pennsylvania.

—The epidemic of typhoid fever in Providence, Rhode Island, is increasing in gravity. The source of the disease is said to be the Pawtuxet River, from which the city derives its water supply.

—The stated meeting of the Lancaster City and County Medical Society was held at Lancaster Dec. 5. Interesting papers were read, and a memorial of the late Dr. D. I. Bruner was presented by Dr. Craig.

—Dr. Maurice N. Miller died in New York City Dec. 8. He was graduated from the Medical Department of the University of the City of New York in 1877, and for a time practised medicine in Philadelphia.

—Malignant diphtheria is reported to be raging along the line between Berks and Lancaster Counties, Pennsylvania. In some families two and three children have died, and even adults are afflicted with the disease. At Reamstown the schools have been closed.

—The *Boston Med. and Surg. Journal*, Dec. 6, 1888, says that the Gouverneur Hospital, New York, one of the smaller city hospitals, has been closed by order of the Commissioners of Charities and Correction, and the patients removed to Bellevue in order to permit a thorough disinfection and fumigation of the building; the house-staff, however, will remain on duty to attend to out-patients and to ambulance calls. Dr. Chalmers, the ambulance surgeon, contracted diphtheria some weeks ago from a dispensary patient, and since that time other cases of the disease have developed in the hospital. The attack of diphtheria was followed by pneumonia and endocarditis in the case of Dr. Chalmers, and little hope is entertained of his recovery. There is a proposition under discussion by the commissioners to abandon the old building entirely, and erect a new reception hospital in the neighborhood.

HUMOR.

The Uncertainties of Life.—Patient (to young physician)—"You say, Doctor, that I am well now, and that no further danger is expected?" Physician—"I apprehend none, sir; but life is uncertain." Patient—"Perhaps I had better pay your bill now." Physician—"Well, yes, sir, it might be as well; as I have said, life is very uncertain."

In front of the provision store of one McMahon, at Crescent Beach, near Boston, numerous squashes were displayed the other day. Rain-drops falling upon them from the electric-light wires so charged the vegetables with electricity that McMahon, in handling one of the squashes, received a severe shock. Other persons tried to pick up the squashes, with the same result.—*Ledger.*

A Nervous-Looking Man went into a store the other day and sat down for half an hour or so, when a clerk asked him if he could do anything for him. He said no, he didn't want anything. She went away and he sat there for half an hour longer, when the proprietor went to him and asked him if he wanted to be shown anything. "No," said the nervous man, "I just want to sit around. My physician has recommended perfect quiet for me, and he says above all things I should avoid being in crowds. Noticing that you did not advertise, I thought that this would be as quiet a place as I could find, so I just dropped in for a few hours' isolation." The merchant picked up a bolt of paper cambric to brain him, but the man went out. He said all he wanted was a quiet life.

The Prayer-Book on Quack Medicine.—A Yorkshire man was very ill, but doggedly opposed to spending a penny upon the doctor. He had found, he thought, a more excellent way, and was accordingly conducting, with very alarming results, some experiments upon his constitution. "My dear Mrs. Blank," said the Vicar to his obstinate parishioner's wife, "your husband is really killing himself with those pills. It is a case of suicide—a downright sin." "Yes, sir," replied she, "and many's the time I've prayed against it in the Church service." "In the Church service?" said the Vicar doubtfully. "You mean when we pray for the sick?" "Oh, no, sir," was the reply; "I mean when we always say—in the Litany, isn't it?—'from all false doctoring, good Lord deliver us!'"—*Cornhill Magazine.*

VALUABLE MEDICAL WORKS

PUBLISHED BY

J. B. LIPPINCOTT COMPANY.

Revised to Date, and Fully Abreast with the Times.

The United States Dispensatory. (A new edition.)

Carefully Revised and Rewritten by HORATIO C. WOOD, M.D. LL.D., J. P. REMINGTON, Ph.G., and S. P. SADTLER, Ph.D., F. C. S. Illustrated. One Volume, Royal 8vo. Cloth extra, $7.00. Best Leather, Raised Bands, $8.00. Half Russia, raised Bands, $9.00.

Thomas's Medical Dictionary.

A Complete Pronouncing Medical Dictionary, embracing the Terminology of Medicine and Kindred Sciences, with their Signification, Etymology, and Pronunciation. With an Appendix. By JOSEPH THOMAS, M.D., LL.D. Imperial 8vo. 844 pages. Extra cloth, $5.00. Sheep, $6.00.

Wood's Nervous Diseases and their Diagnosis.

A Treatise upon the Phenomena produced by Diseases of the Nervous System, with Especial Reference to the Recognition of their causes. By H. C. WOOD, M.D., LL.D., author of "Thermic Fever," "On Fever," etc. Extra cloth, $4.00. Sheep, $4.50.

Jamieson's Diseases of the Skin.

A Manual for Practitioners and Students. By W. ALLEN JAMIESON, M.D., F.P.C., P.E., Physician for Diseases of the Skin, Edinburgh Royal Infirmary, etc. Illustrated with wood-cuts and colored plates. 8vo. Extra cloth, $6.50.

Wood's Therapeutics. (A new edition.)

Its Principles and Practice. By H. C. WOOD, M.D., LL.D. A Work on Medical Agencies, Drugs, and Poisons. With special reference to the relations between physiology and clinical medicine. SEVENTH EDITION. Rearranged, rewritten, and enlarged. 8vo. Cloth, $6.00. Sheep, $6.50.

Remington's Practice of Pharmacy.

With over 1000 Pages and nearly 500 Illustrations. 8vo. Extra cloth, $5.00. Sheep, $6.00. By Prof. JOSEPH P. REMINGTON, Ph.M., F.C.S.

*** For sale by all Booksellers, or will be sent by mail, post-paid, on receipt of price.

℞

'North Cape' Norwegian

Cod Liver Oil, in stone.

"NORTH CAPE"

COD LIVER OIL

in stone Bottles—Pints and Quarts.

Cod Liver Oil deteriorates rapidly when exposed to light. The North Cape is carefully protected from light from the time of its production, and will remain fresh and sweet indefinitely.

IMPORTED BY

JOHN C. BAKER & CO.,

815 Filbert Street, Philadelphia.

Western Pennsylvania Medical College,

City of Pittsburgh.

The *Regular Session* begins on the last Tuesday of September and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation.

A three years' graded course is also provided. The *Spring Session* embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects: this session begins the Second Tuesday in April and continues ten weeks.

The laboratories are open during the collegiate year for instruction in Chemistry, Microscopy, practical demonstrations in Medical and Surgical Pathology, and lessons in Normal Histology.

Special importance attaches to the superior clinical advantages possessed by this college. For particulars, see annual announcements and catalogue, for which address the Secretary, Prof. W. J. ASDALE 2107 Penn. Avenue, Pittsburgh.

FOR THE INSANE.

CINCINNATI SANITARIUM.

PRIVATE HOSPITAL AND RESIDENCE.

(Incorporated 1873.)

Proprietary Interest Strictly Unprofessional.

Both sexes and all classes of mental and nervous diseases provided for.

Forty minutes by rail from C. H. & D. depot, Cincinnati. Address,

ORPHEUS EVERTS, M.D., Sup't.

COLLEGE HILL, OHIO.

BURN-BRAE.

This Hospital, founded by the late R. A. Given, M.D., 1859, and designed for the care and treatment of a limited number of cases of **Mental and Nervous Disorders**, is located at Clifton Heights, Delaware Co., Pa., a few miles west of Philadelphia. Primos Station, on the Philadelphia and Media Railroad, is within less than ten minutes' walk.

Burn-Brae has been in operation for more than a quarter of a century, and numbers its friends in all sections of the country. With **extensive grounds**, handsomely laid out, building attractive in appearance, a wide and varied view, bedrooms large, cheerful, and well furnished, heating-facilities perfect, light abundant, with constant professional supervision, Burn-Brae offers, for the care and treatment of its inmates, a pleasant, safe, and healthful HOME.

Resident Medical Officers:

J. WILLOUGHBY PHILLIPS, M.D., S. A. MERCER GIVEN, M.D.

DETROIT COLLEGE OF MEDICINE.

SESSION 1888-89.

Clinical and Practical teaching are made an important feature of this College. Clinical instruction is given daily at HARPER, ST. MARY'S, and ST. LUKE'S HOSPITAL, at the COLLEGE, at COLLEGE EYE and EAR INFIRMARY, ST. MARY'S FREE EYE and EAR INFIRMARY, and at the three FREE DISPENSARIES. The facilities offered by this college are unsurpassed for the practical study of MEDICINE, SURGERY, OBSTETRICS, GYNÆCOLOGY, DISEASES OF CHILDREN, GENITO-URINARY, and ORTHOPÆDIC SURGERY, OPHTHALMOLOGY and OTOLOGY, DERMATOLOGY and LARYNGOLOGY.

REGULAR SESSION opens on Wednesday, September 26, and continues six months. During the session, the Professors will take special pains to examine the Students upon the subjects of the previous lectures.

SPRING SESSION begins March 27th, 1889, and closes June 17th.

FEES.—Matriculation fee, $5; Fees for Regular Session, $50; Spring Session, $10, to those who attend the regular term—to all others, $25; Hospital Fee, $10; Graduation Fee, $30; Perpetual Ticket, $100.

For further particulars, and for College Circular, apply to

H. O. WALKER, M.D., Secretary,

33 Lafayette Ave., Detroit, Mich.

University of Pennsylvania

MEDICAL DEPARTMENT

The 123d ANNUAL WINTER SESSION will begin Monday, Oct. 1st, at 12 M., and continue 7 months.

The PRELIMINARY SESSION begins Monday, September 17th, the SPRING TERM Monday, May 6th, 1889.

The Curriculum is graded, and three annual Winter Sessions are required. Practical instruction, including laboratory-work in Chemistry, Histology, Osteology, and Pathology, with Bedside Instruction in Medicine, Surgery, and Gynæcology are a part of the regular course and without additional expense.

For catalogue and announcement containing particulars, apply to DR. JAMES TYSON, Sec'y,

36th and Woodland Ave., Phila.

COMMUNICATIONS.

PNEUMONIA AND ITS TREATMENT.

BY W. H. CURTIS, M.D.,
WILMINGTON, ILL.

The mortality statistics of this disease as furnished us by our hospital reports, afford us much cause for regret. Whether the mortality in general practice is greater than it was a quarter of a century ago, is perhaps still a question; but all must agree it is too great. In the literature of this, as in that of many other diseases, there seems to be a lamentable dearth of recorded observation by private physicians. Were the reverse the case, I am convinced the death-rate of pneumonia would not show such high figures. While this disease has always been a serious and frequently a fatal one, it has not been my experience that the mortality reached thirty, twenty, or even ten per cent. in any considerable series of cases.

I regret to say that, previous to three years ago, I, like many of my brother practitioners, kept no record of my cases; since that time I have notes of one hundred and sixteen cases of pure uncomplicated lobar pneumonia. In this series I have carefully excluded all cases of intercurrent pneumonia, and all cases in children under five years of age, as being probably lobular pneumonia.

While it would be a waste of time to give their individual histories, I will simply state that there were, between five and fifteen years of age, thirty-four cases; between fifteen and thirty, nineteen cases; between thirty and forty-five, twelve cases; between forty-five and sixty, twenty-one cases; between sixty and seventy-five, twenty-five cases; between seventy-five and ninety-one, five cases; one being eighty-two, one eighty-nine, and one ninety-one years of age.

Of these one hundred and sixteen cases, two died. One hundred and ten consecutive cases recovered.

Case one hundred and eleven occurred in a man of eighty-two, an habitual drinker, for whom no physician was called until the third day of his illness, he having had little or no care meanwhile, and dying within six hours after I saw him, probably of heart failure. This case might justly be excluded from my series, as practically I gave him no treatment whatever.

Case one hundred and fourteen occurred in a woman of 76, whom I first saw thirty-six hours after the initial chill, and but once a day thereafter. Both lungs were involved, and she died of heart failure on the sixth day, twelve hours after the crisis.

While this is perhaps an unusually fortunate showing for so large a series, I am bound to say they were not selected cases, but taken as they came, and embracing every feature of the disease and of the social scale. Many were treated without the commonest necessities, others were supplied with all the physician's heart could wish, but all alike were enabled to have what many a poor sufferer in the city has been forced to give his life for want of—pure air.

I am frequently asked how I treat pneumonia; I will state some of my views as briefly as I can, but first let me premise by saying that I recognize pneumonias *and* pneumonias.

In perhaps no disease with which we have

to deal, is the injunction "generalize your disease, and individualize your patient," better worth heeding.

While lobar pneumonia in the palsied old man of eighty, the robust athlete of thirty, or the growing adolescent, may always be lobar pneumonia, it does not follow that the treatment should always be the same.

In my cases the initial rigor has been quite constant, but very variable as to severity, being most pronounced in those we may call plethoric, and perhaps only a slight chilly sensation in the anæmic, the old and the young. This is followed by an immediate rise of temperature, usually reaching its highest point within twelve hours. With me it has been rare that I found this maximum, or say the evening temperature of the first day, exceeded at any time during the course of the disease; this is especially true of the more sthenic cases, and may perhaps be attributed to the initial shock to the nervous system, and the pain of an accompanying pleurisy, which is usually alleviated by appropriate remedies before the next visit.

In this series of cases, the maximum temperature in any one case was 106°, the minimum 96°; as a rule they presented the characteristic curve, ranging from about 103°–104° in the evening to 101°–102° in the morning.

I have met with an occasional afebrile case, running its entire course with very little elevation of temperature. These cases are almost always in the old and anæmic, and are never to be regarded as "safe" cases.

One patient never had a temperature of 100° but once, and then only for a short time, usually ranging about 99°, and yet the patient was a very sick one. I have rarely had to make use of antipyretics, that is, the more heroic ones. An occasional sponging with cool or tepid water has answered every purpose. I have never employed the cold bath, nor applications of ice, and I must confess I fail to see their advantage over less violent measures. The capillary circulation has seemed to me to maintain the just balance between the interior and the exterior of the body.

With each pulsation of the heart a large quantity of blood is forced into the capillaries of the skin; of course the application of cold (*i.e.*, ice) would tend to reduce quickly the temperature of this mass of blood, but there is a secondary effect to be feared, the contraction of the capillaries themselves, thus tending to restrict the subsequent flow of blood to the skin, and aggravating the existing engorgement of internal organs. Cool or tepid sponging, while not so prompt, is I think sufficiently so, and its effect more prolonged, while it has the additional advantage of being grateful to the patient, and is not productive of shock.

I have never met with a case when I feared for the patient's life because of continued high temperature *per se*.

The condition of the vascular system requires close scrutiny at all periods of the disease, nor is the pulse always a reliable guide as to the extent and sthenic character of the inflammation. In the plethoric robust individual, anything which interferes with the circulation frequently tends to quicken the pulse and increase its volume, while in the anæmic and ill-nourished a much greater extent of inflamed lung-tissue may be productive of a weak and compressible pulse.

In pneumonia we are apt to have two distinct periods of pronounced interference with the circulation, the first immediately following the onset of the disease, and mechanical or obstructive in its nature; the second occurring at a variable period and dependent upon a failure of cerebro-spinal innervation.

Both are frequently accompanied by cyanosis, but the action of the heart differs widely; in the one case we have a full bounding pulse, in the other a weak, compressible, and frequently an intermittent one. Venesection has been advocated at both periods, but I have never used it, although I am prepared to admit its theoretical propriety in the earlier stages of the first period; but it is rarely the case that I see a patient who would submit to this procedure, until the proper time for it has passed. In the second period I fail to see the propriety of venesection, even theoretically, and, so far as I know, its advocates have only been able to give us the statistics of an almost unbroken series of deaths.

I have no special or specific treatment for pneumonia to offer; perhaps no two of my cases have been treated alike, and yet there are certain indications common to most cases that seem to call for about the same remedies. I am no believer in the doctrine that all cases can be aborted, neither do I believe that medicine is useless in this disease; in fact, I do believe there is perhaps no disease with which we have to deal, when the judicious use of remedies is productive of better results. On my first visit I always seek to provide for free

ventilation, preferably without draughts, but fresh air at any cost: this is our cheapest and perhaps most effective remedy. The bowels are commonly found more or less constipated; this I relieve by a free purge, usually of calomel.

This procedure I esteem important not only for its primary effect, but because it diminishes the necessity for an exhaustive movement of the bowels at a later period of the disease, when it is necessary to conserve all of the patient's strength. For this reason too, I make a thorough physical examination on my first visit, and arrange my patient so that all subsequent examinations may be made with as little disarrangement and movement as possible.

It is not well to make a patient with pneumonia sit up, turn over and move about on every visit, and if the first examination has been a thorough one, the vital signs which may be obtained without much disturbance of the patient are usually amply sufficient to furnish a fair guide for treatment. Rest, physical and mental, is a not unimportant matter. If pain and cough are severe, I usually make use of counter irritation with mustard or perhaps a blister in the robust, and give an anodyne, Dover's powder or morphia. If the skin is dry and pungent, a diaphoretic such as nitrate of potash or aconite. If I am sure of my nurse, and very much depends thereon, I am partial to the hot poultice for the first day or two, followed by the cotton jacket; if I cannot depend upon the nurse, the cotton jacket from the first. Nothing is more injurious than an improperly applied poultice which allows the patient to become chilled, the clothing soiled and saturated. With suitable directions for the diet, this is about all that is necessary for a day or two.

Upon the appearance of the first symptoms of nervous exhaustion, indicated by a flagging heart, sleeplessness, etc., I resort to a stimulating treatment, carbonate of ammonia, strychnia, atropia, digitalis, the latter being of decided benefit in my estimation, whether kidney complications are present or not.

But the stimulant *par excellence* is alcohol, in the form of champagne, whiskey or brandy, and were I confined to one remedy in the treatment of this disease I think I should choose alcohol.

It is true many patients will recover well and promptly without it. Very well, don't give it in these cases; but there are others, and I have seen many of them, who I am convinced will die without it. I do not claim any specific quality for alcohol in pneumonia, only that it seems to meet certain indications, particularly in the old, better than anything else.

A very small quantity may be required to tide over a dangerous period: an ounce may be sufficient for twenty-four hours, or you may need that quantity every hour; I know of no rule for its administration but its effects. I will say this. I never yet have seen a case where I thought it did harm. As a rule, I find stimulants indicated by the third or fourth day, when they should be commenced in small or moderate quantities, perhaps in the form of egg-nog or milk-punch, and gradually increased as needed until the crisis is passed.

From the fourth day on, *be sure of your nurse;* everything now may depend upon the faithfulness with which your orders are carried out, particularly in regard to the administration of stimulants. Many untrained nurses, and those are the kind the majority of physicians have to deal with, are prone to substitute their views for yours as to the quantity required. The temperature and pulse must be closely watched; probably the latter will have become irregular, weak and perhaps intermittent; but when the temperature begins to fall, look out, for the crisis has come, and frequently it comes with a crash; 100°, 99°, 98° are quickly reached, but even here it does not always stop unless all your precautions have been fully effective, but plunges down until 97° or even 96° is reached, and now you have all the phenomena of profound collapse.

Now or never is the time for liberal stimulation; no use now to regret that you did not early in the disease bleed to syncope, or give heroic doses of calomel or tartar emetic *et genus omne*. Nothing will answer now but to whip the tired heart until it beats again, and rouse the sleepy cerebro-spinal system with alcohol, strychnia or atropia until the chest heaves once more. Even artificial respiration may be required for a time. I am sure I saved at least one life by this procedure, in a case when stimulants had not been properly given at the period of crisis.

If it is urged that there is nothing new or novel in the line of treatment I have indicated, I can only offer as an excuse for taking up your space, that its results have been perhaps a little old-fashioned also.

While no one is more ready to grant all honor to the triumphs of modern therapeutics than myself, I cannot help feeling

that it is perhaps better for the general practitioner not to place too much confidence in specifics, to the neglect of that great fundamental principle of medicine, the placing of the patient in the best possible physical condition to resist disease. Old friends are proverbially better than new ones, and the physician is always most successful in the cure of disease who knows how to use a few remedies well. Following the line of treatment indicated, crisis has generally occurred on the fifth day, never later than the seventh, and recovery has been prompt and complete.

DENOMINATOR TRITURATIONS.

BY EDWIN PYNCHON, M.D.,
CHICAGO, ILL.

At present the tendency in medicine is toward the prescribing of remedies more concentrated in form and positive in action. In the alkaloids we have the acme of concentration and of therapeutic power as well as the advantages of permanency and of invariability.

While minuteness of dose is primarily advantageous, it is coupled with the disadvantage of being more difficult to dispense, as extreme accuracy is imperative. In the dosimetric and other granules on the market we have a convenient and precise method of prescribing these remedies when pill form is acceptable. I have frequently found it desirable to have the remedy prescribed prepared in the form of powder or triturate. For some time I have been employing preparations in a form of triturate which I have called denominator triturations, and which have proved highly satisfactory. This system of trituration is free from objections which can be made to the decimal or centesimal systems as used in the homœopathic school, which systems are founded upon a geometrical progression so as to make them practically valueless for regular prescribing.

Were decimal triturations and dilutions marked as are sublimate solutions, they would read 1 in 10, 1 in 100, 1 in 1000, 1 in 10,000, etc. As triturates are usually given in three grain doses, the prescriber would be giving either 3-10, 3-100, 3-1000, or 3-10,000 of a grain as the case might be up to 4x, and as one goes "higher" the dose diminishes proportionately. For regular prescribing, a system of trituration is required in which the progression is less rapid.

Denominator triturations can be prepared from any remedy which is given in doses of one grain or less. In their preparation I select as denominators numbers which can be evenly divided by the figure 3, and for each remedy the denominator is so selected that a three grain dose of the resulting triturate shall contain what is regarded as being the *average adult dose* of the remedy. For example, taking sulphate of morphine, the average dose of which is 1–8 of a grain, I have triturated one grain thereof with twenty-three grains of sugar of milk and mark it: "Morphiæ Sulphas 24"; of this preparation the number of grains given at a dose is always the numerator over the denominator 24. Thus three grains is 3–24 or 1–8; two grains is 2–24 or 1–12; six grains is 6–24 or 1–4, etc. The remedy is thus sufficiently triturated for accurate dosage and so plainly marked, that, while unintelligible to the layman, it reads in the clearest possible manner to the initiated. The numeral is written or printed in as large type as is the name of the remedy and is on a line therewith so as to be perfectly legible. One soon learns to associate the numeral with the name as a part thereof, and further to classify together those remedies which require the same denominator. The dose can always be accurately measured by means of the three-grain spoon which at the opposite end is provided with a smaller concavity which when even full contains two grains.

The denominators which I find are the best to employ are 3, 6, 9, 12, 18, 24, 30, 36, 48, 60, 75, 90, 120, 150, 180, 240, 300, 360, 450, 600, 750 and 900. The figures 10 and 100 may also be employed, they being the equivalents respectively of 1x and 2x of the decimal system, which may be substituted for them if desired.

This system of triturating and marking remedies will be found to be both convenient and practical by physicians who care to do any office or bedside dispensing, and need not be limited to the alkaloids, but may be employed with the resinoids, glucosides, and oleo-resins, or with other agents, such as arsenious acid, or any remedy which is prescribed in small doses. As there may be a difference of opinion as to what is the average adult dose of a given remedy, each physician can order his triturations prepared of such strength as his experience shall suggest. For example, he may have his Morphiæ Sulphas either 18 or 48. In either case, another understanding the system could use his triturate correctly and could give exactly the dose desired.

The specialist can also employ the system of trituration which I here describe in the preparation of powders for topical application, in which case any inert powder which may seem best can be substituted for the sugar of milk.

Should any physician be interested in the subject of which this paper treats and wish further information in regard to it, I will take pleasure in mailing to him, on request, a reprint of a paper which I read before the Chicago Medical Society, April 16, 1888, in which the matter is more fully elaborated.

703 Chicago Opera-House Block.

IMMENSE LEFT INGUINAL HERNIA, WITH RIGHT INGUINAL AND FEMORAL HERNIA, IN A WOMAN; REDUCTION; RADICAL OPERATION BY DR. W. W. KEEN; RECOVERY.[1]

BY CORNELIA KAHN, M.D.,
PHILADELPHIA.

The subject of this report was a well-nourished German woman, 52 years old, a widow, who had been married for 30 years and had given birth to eleven children. She was generally up and about after the ninth day. One birth was a shoulder presentation. When pregnant with her third child, twenty-seven years ago, nausea and vomiting caused a small lump to appear in the left groin, which gradually increased in size, and more rapidly within the last two years, until it attained immense proportions. While in Germany, the patient was fitted with some kind of a steel support, which irritated the integument of the hernia so much as to cause erosions and hemorrhage, rendering it necessary to discontinue its use.

When I first saw the rupture, in December, 1887, there was a tumor hanging down the thigh, reaching nearly to the knees. It was as large as a man's head, and measured thirty-nine inches in circumference and twenty-six inches in length. It was very hard and tense while the patient was standing. It had caused very little suffering, nor had there been much trouble from constipation until within the last two months, when laxatives were necessary. The patient said that the tumor always diminished when she lay in bed, and she had pain only after taking cold or after much exertion. She had not been doing hard work of late, as her children, both married and single, live with her.

On December 23 I took her to the Surgical Clinic of the Woman's Hospital, where Dr. W. W. Keen tried to reduce this inguinal hernia and succeeded in getting some coils of the intestines back into the abdomen. The patient was given a laxative to take every night, and, when next seen, the tumor was not so tense, but she reported having had colic, and that after remaining in bed for two days she had been able to replace some of its contents. Being in bed merely over-night did not affect it to any great extent. When at stool it seemed to retract also.

A suspensory bandage was applied several times. This, however, would not remain in

place, and on January 5 another effort was made to reduce the hernia by taxis and by suction, using Dr. Hartshorne's abdominal tractor for the purpose, as described in the *Medical News*, March 1, 1884. Its size was lessened considerably; and, as it was found to be quite reducible, the patient was advised to come to the hospital and have a radical operation performed.

In February, 1888, she had a severe spell of colic, but did not send for me. When, however, I visited her later, I found the hernia very tense, with swollen veins. A small irreducible femoral hernia, which had been overlooked before, was found on the right side. During March, she had another

[1] Report read before the Clinical Society of Philadelphia, October, 1888.

attack of colic, and on April 4, 1888, she was admitted to the hospital, where she was kept in bed on low diet, with injunctions not to rise. Physical examination showed her heart and lungs to be in normal condition; her pulse 76, respirations 19, temperature 98.4°. Urinalysis revealed nothing abnormal, except a high specific gravity—1,032. On the fourth day after admission, taxis was begun, and repeated on alternate days, with the occasional use of Dr. Hartshorne's apparatus, and a spica bandage in the intervals. The horizontal position seemed to prevent daily evacuations, so the patient was permitted to use the *commode*. The tongue was much coated and the breath offensive when the bowels were not moved freely, but the patient otherwise was in good condition and spirits. The hernia was so large that, in endeavoring to reduce it manually, Dr. Keen was obliged to have four or five hands to compress it. In examining the loose attachments at the neck of the sac, the borders of the ring could be distinctly felt as the finger was swept round the entire circumference and the adhesions at various parts were loosened. General compression of the tumor was used for reduction, during part of the time; but the main effort was to reduce that portion of the bowel which last protruded through the ring. This was large enough to admit the ends of four fingers without bunching them. By repeated taxis the mass was gradually reduced to one third of its bulk, when suddenly, on April 17, thirteen days after admission, the entire contents were restored to the abdominal cavity, leaving a large mass of puckered, wrinkled skin which had covered the sac. A spica and compress were now placed over the ring.

Dr. Keen had not been willing to operate upon the patient until reduction had been effected, fearing that the abdominal wall had contracted materially in the many years during which the hernia had existed, and that the sudden return of the intestines to a cavity not now adapted to their bulk would prove an obstruction to respiration. Two cases of operation for strangulated hernia were known to Dr. Keen in which death had followed in consequence of this upward pressure on the diaphragm.

Three days after complete reduction had been accomplished and the patient had experienced no difficulty in breathing, it was decided to perform the operation, which accordingly took place April 20, 1888. Strict antisepsis was observed, and ether was administered. Dr. Keen made an incision four inches long over the ring, and afterward prolonged it into the left labium. The hernial sac was easily dissected from the skin, being thickened to nearly one-eighth of an inch. When the neck was reached, it was easily recognized by the fibrous aponeurosis of the external oblique. Not a single vessel required ligation. Before operating on this side, it occurred to Dr. Keen that, as the inguinal ring was so widely open and there was so large a sac, the femoral hernia on the right side could be reached by invaginating the sac, and perhaps reduced by traction from within. Although the inner openings of both the inguinal and femoral rings were easily reached with three fingers, all efforts to seize the hernia from within failed, whether with one hand or bi-manually.

Dr. Keen then considered the advisability of opening the abdominal cavity in order to reduce the right hernia, but finally decided not to do this, as the tumor proved to be omental, was giving her no present trouble, and the operation in hand was a sufficiently grave one.

The sac of the left hernia had shrunken considerably since the incision was made, so the neck of the sac was twisted and a chromic catgut suture was passed through it and the abdominal wall at the upper end of the ring; then folding the sac downward so as to fill the cavity of the ring, it was secured to the two borders of the ring by six sutures on each side. In order to prevent too great a gap in the ring, there was placed through it, from side to side, three chromic catgut ligatures, leaving the ring an oval opening, nearly a finger's breadth in width, and two and one-half inches long. The redundant skin, to an extent twice the size of an open hand, was removed, and the wound, extending well down into the left labium, was united with forty-five silk sutures.

The entire incision was fifteen inches long. Two glass drainage tubes were inserted, one at the middle and the other at the lower end of the wound; a strand of horse-hair was also passed through the whole length of the wound.

The next day some pain was felt in the wound, and the temperature rose early in the morning to 102°, but declined in a few hours. The dressing was changed, as it was moderately saturated with blood, and the glass drainage tubes were removed in twenty-four hours. The portion of the sac in the ring looked as if it were going to slough. On the second day the wound was uncovered to observe the part that looked

like sloughing, but there being no tenderness and very little tumefaction, it was simply re-dressed. On the *fourth* day the horsehair was removed and some of the stitches. The ring was found to be considerably retracted, and marked by swelling, and there was a very slight tenderness, on its inner border. A portion of the sac had lost its vitality, but the wound was uniting without inflammation. A movement of the bowels was secured on this day, by the use of high enemata and divided doses of sulphate of magnesia. The patient had no appetite, but took milk and beef-tea as was ordered. In about a week there was moderate sloughing of the sac with consequent odor and discharge, and some pain, but this was controlled with five grains of chloral. A solution of ferri et potass. tartras was applied at a later period, to stimulate the granulating process.

On June 21, two months after the operation, the patient being in good condition, with the wound entirely healed with the exception of a small point of redness, she was discharged from the hospital. For five weeks before leaving the hospital, the patient wore an abdominal bandage. She first sat up June 2, seven weeks after the operation, and from that time improved in spirits and appetite, and was feeling very well at the date of her discharge.

I visited her several times during the succeeding week to look after the wound and to apply a bandage to support the lower part of the abdomen. I cautioned her about being on her feet too much, and charged her to keep the site of the wound well washed with carbolized water, as it was quite sunken, the redundant skin from below folding over it. Toward the close of the week I noticed a swelling above the wound, and fearing a return of the former trouble had her come to the clinic to have Dr. Keen examine it. She was obliged to walk several squares, and when she arrived at the hospital the hernia was protruding to a considerable extent, and we found that the adhesions had given way in the upper border of the ring. This fact made it imperative for the patient to wear a truss, and she very soon became accustomed to its use.

During the next two months I kept watch of the case, and in the latter part of August I noticed a swelling on the right side above and anterior to the old femoral hernia. This proved to be another inguinal hernia, and the patient was now obliged to get a double truss.

Since her discharge from the hospital, the abdomen has lessened in size, and the bowels have continued to perform their functions unaided by drugs. It seems strange that the patient was not troubled more with constipation and pain during all of the years that this immense hernia existed, for there must have been great dragging on the blood-vessels, nerves, and mesentery, and one would have expected the circulation to have been seriously interfered with.

Now that the bowels have been returned to their new but normal situation, and the patient is again on her feet, her functions have been performed naturally and easily.

As this inguinal hernia was of such extraordinary size and reducible and had existed for such a length of time, without giving the patient much trouble, I deemed it of sufficient importance to report its history and treatment in detail.

I have not been able to find any record of cases analogous to this one, as the majority of the few reported inguinal herniæ in women have been strangulated ones. Several reducible ones have been reported, but they were of small size and of recent origin. In the *St. Louis Courier of Medicine*, 1879, vol. i, page 26, there is a case reported which parallels in certain particulars the one I have just described. When first seen by the physician, this hernia appeared no larger than half a hen's egg, making a tumor in the inferior portion of the pudendal region on the left side. At the end of five years it had assumed immense proportions, measuring forty-three inches in circumference and seventeen inches in length. The patient had continued in good health up to this time, when she was suddenly seized with chills and fever, and livid spots showed themselves on the tumor. She died two days later. *Post-mortem* examination showed that the size of the tumor was mostly due to hypertrophied tissues and bloody serum; there was only a small portion of the colon and some omentum in the sac. Although there is some similarity between the cases described there, yet there are also striking differences. The tumor in the case of my patient existed for twenty-seven years, and was reducible, even after this great lapse of time and notwithstanding the large mass of intestines which it contained.

—Over 200 deaths from diphtheria are said to have occurred in the vicinity of Albuquerque, New Mexico, in the first two weeks of December. The breaking-out of small-pox has caused much additional alarm.

PERISCOPE.

Gonorrhœal Infection of the Mouth.

Dr. Condict W. Cutler reports a case of this kind in the *New York Medical Journal*, Nov. 10, 1888. Miss J. C., twenty-one years old, presented herself for treatment at the New York Dispensary, July 18, with the following history: Ten days previously, while under the influence of liquor, she yielded to the unnatural desires of a sailor, and had taken his penis several times into her mouth. The next morning her mouth felt raw and dry, and the saliva had a horrible taste. On the second day little sores made their appearance about the lips, and the condition of the mouth remained the same. On the third day the gums and tongue became swollen and painful, and on the fifth day the whole inside of the mouth was so intensely inflamed that she was unable to eat; and a whitish fluid, mixed with blood, having a nasty odor and taste, was secreted. This continued until the pain and inability to eat compelled her to seek medical advice at the dispensary. On examination, the lips were found cracked and covered with herpes in all stages of development. The mucous membrane of the lips and cheeks was thickened, reddened, denuded of epithelium in places; and, in small areas, covered with a false membrane, which was easily detached, leaving an excoriated surface.

The gums were swollen and retracted from the teeth, bleeding readily upon pressure. The tongue was swollen, very tender on touch and pressure, and could be but slightly protruded, and then only with great pain and effort. The surface was red and glazed in appearance, with small superficial ulcers here and there, secreting a thick yellowish pus. The soft palate and anterior pillar of the fauces presented an inflamed appearance, but beyond the parts seemed to be in a normal condition. The breath was extremely offensive, although there was but little salivation. The secretion from the mouth consisted principally of mucus, pus-cells, and epithelium, and large numbers of bacteria. The false membrane contained microorganisms resembling the gonococcus, but their identity was not fully established.

The sailor freely admitted that he had been suffering from a severe attack of gonorrhœa, and, not wishing to infect the girl, had entreated her to comply with his unnatural demands. She had yielded to his wishes, and become affected with a purulent stomatitis, probably gonorrhœal in character.

The symptoms were greatly relieved with the local application of glycerine and bismuth subnitrate, together with a mouth-wash of chlorate of potassium; but the patient disappeared from under observation before the cure was complete.

Poisoning With Sublimed Sulphur.

Mr. Alfred E. Vaughan reports a case of poisoning from two ounces of sublimed sulphur, in the *British Med. Journal*, Nov. 3, 1888. It seems that a mechanic had suffered for some time with external piles. He applied to a chemist, who sold him an ounce of sublimed sulphur, with directions to take it overnight. This was on Monday; he took the dose, and repeated it on Tuesday. On Wednesday Mr. Vaughan was called in hurriedly, as the man was supposed to be dying. He found him lying on his back in bed, utterly prostrate, and partly insensible. He had had repeated rigors during the day, and in lucid intervals complained of intense frontal and vertical headache, with aching griping pains in the bowels. His symptoms on examination were briefly: Temperature 104°; pulse hard and quick (120 per minute); tongue dry and deeply furred; breath fetid, and smelling strongly of sulphuretted hydrogen; pupils strongly contracted and insensible to light; skin bathed in a profuse clammy perspiration; abdomen tympanitic and very tender on slight pressure. He retched and vomited almost continuously, and was several times purged during Mr. Vaughan's visit—both vomit and dejecta being composed mainly of slightly bloody mucus, mixed with fine particles of sulphur. The urine he had passed (in driblets) also contained blood. The cause of his illness being ascertained, hot fomentations were applied to the abdomen, and a moderately large dose of castor oil administered. The next day he was still purged, but most of the irritant sulphur appeared to have been eliminated, so it was considered safe to treat the case as one of acute enteritis, and he was put under a course of opiates. He remained in bed for about a week, but otherwise made an uninterrupted recovery.

The case appears interesting since sulphur is not usually counted as a poison. The dose taken (two ounces) was very large, and the symptoms produced were certainly those of a strongly irritant poison.

THE

MEDICAL AND SURGICAL REPORTER.

ISSUED EVERY SATURDAY.

CHARLES W. DULLES, M.D.,
EDITOR AND PUBLISHER.

The Terms of Subscription to the serial publications of this office are as follows, payable in advance:

P. O. Box 843. Philadelphia, Pa.

☞SUGGESTIONS TO SUBSCRIBERS:

See that your address-label gives the date to which your subscription is paid.

In requesting a change of address, give the old address as well as the new one.

If your REPORTER does not reach you promptly and regularly, notify the publisher *at once*, so that the cause may be discovered and corrected.

☞SUGGESTIONS TO CONTRIBUTORS AND CORRESPONDENTS:

Write in ink.

Write on one side of paper only.

Write on paper of the size usually used for letters.

Make as few paragraphs as possible. Punctuate carefully. Do not abbreviate, or omit words like "the," and "a," or "an."

Make communications as short as possible.

NEVER ROLL A MANUSCRIPT! Try to get an envelope or wrapper which will fit it.

When it is desired to call our attention to something in a newspaper, mark the passage boldly with a colored pencil, and write on the wrapper "Marked copy." Unless this is done, newspapers are not looked at.

The Editor will be glad to get medical news, but it is important that brevity and actual interest shall characterize communications intended for publication.

PROVIDENT DISPENSARY.

It has recently been announced by advertisement in the daily papers and otherwise that a so-called "Provident Medical Service" has been organized in Philadelphia, with a rather imposing Board of Managers and a well-known medical man as President. The affair is a dispensary, modelled on the lines of what are called "Provident Dispensaries" in London. Persons treated here are to be charged the small sum of twenty-five cents for each consultation. The idea is that this will encourage those who are too poor to pay the usual fees, at least to pay something; and that thus worthy people in straitened circumstances will be saved from the disgrace of pauperism.

If this were a correct idea, and if it were all there was in the scheme, the latter would certainly deserve commendation. But, unfortunately, there is reason to believe that the effect of such an institution as this—if it has any—will be to gather together patients who could pay the fees ordinarily charged to persons in moderate circumstances, and to fix in their minds the notion that twenty-five cents is the proper amount to pay for medical advice. If this is so, it will not elevate the unfortunate, but degrade the undeserving, and prove an injury to the whole medical profession.

More than this: the time is past when institutions of this sort can successfully pose as public charities. All who know anything about them know perfectly well that their underlying motive is usually that which lies at the base of all other advertising schemes, and if—as in the case under consideration—the men connected with it try to make such a concern pay its own expenses, or even bring them in a little revenue, they will have no reason for surprise or complaint if the medical men in whose midst they place their attractive trap, object to it and to them for the very same reasons that prejudice them against any other commercial enterprise which threatens to interfere with their own success.

It has astonished us that men so thoroughly respectable, in the medical profession and out of it, have been willing to have their names connected with this enterprise. We have no idea that it will succeed; for we do not think the American mind is a suitable soil for the cultivation of such ideas as are necessary to the success of this sort of thing; and what we know of the working of such "provident dispensaries" in England leads us to regret very much that this one was ever started.

AN EPOCH AT THE UNIVERSITY OF PENNSYLVANIA.

The University of Pennsylvania is just now going through an epoch which cannot fail to make a lasting impress upon the career of its Medical Department. The recent resignations of Professor Osler and Professor Agnew have involved much more than the choice of incumbents for the chairs they at present occupy. This alone would be a serious matter; for both have filled their positions with so much advantage to the University that the choice of worthy successors to them would ordinarily be no easy task. The case is simplified, in regard to the chair of surgery, by the fact that there is so far but one nominee for Dr. Agnew's position, and that his nomination meets with universal approval.

It is different, however, with the chair of clinical medicine. For this there are already about half a dozen candidates, and the names proposed furnish the Trustees opportunity to make a very good choice, or a very bad one.

But, as stated above, this is not all; for the election of successors to Professor Agnew and Professor Osler may vacate two other chairs, and candidates for both of them are already in the field or ready to enter it. The whole chain of events affects no less than six chairs of instruction, and its evolution will be regarded with deep interest by all who have the welfare of the University at heart.

The epoch is, we believe, a critical one. The men soon to be chosen will have a great deal to do with shaping the career of the Medical Department of the University of Pennsylvania for the next twenty or thirty years, with molding its character and making its reputation. This fact forces itself upon the attention of those who wish to see the ancient standing of the school maintained. The occasion calls for the exercise of the wisest discrimination, and especially, we believe, for narrowly scrutinizing the personal character, the professional skill and the teaching faculty of every candidate for a professorial position. If the men to fill the positions recently opened to competition, or likely soon to be opened, are chosen with an eye solely to these qualifications, the choice will strengthen this grand old school, and encourage the worthy ambition of the kind of men who are most likely hereafter to promote its welfare and increase its fame.

TREATMENT OF PELVIC ABSCESS IN WOMEN.

If by license we regard pyo-salpinx as a form of pelvic abscess—which clinically it is—then the treatment applicable to the immense majority of cases of pelvic abscess is abdominal section and removal of the occluded and distended tube or tubes. The same treatment is proper for abscess of the ovary. To Lawson Tait is due the credit for establishing this method of treating these cases upon a firm basis. He recognized clinically what Bernutz and others discovered, and proved by *post-mortem* examinations, and he went further, and perfected a means of radical cure.

Intra-peritoneal accumulations of pus are common. Clinically they are cases of pelvic abscess. Matthews Duncan insisted upon this point as long ago as 1868. These accumulations are of extreme interest etiologically and therapeutically. It is now admitted that they are usually caused by salpingitis—often by leakage from pyo-salpinx. Hence in many cases there is practically an abscess within an abscess, as pointed out by Aran thirty years ago. Some are cases of suppurating hæmatocele. Perforation of the appendix vermiformis may be mentioned among other causes. Suppurative peritonitis is secondary; belief in idiopathic peritonitis is obsolescent, if not obsolete. The method of treatment for these conditions which is pushing to the front is abdominal section, separation of the adherent omentum, bowels, uterus, bladder, tubes, etc., by tearing or with scissors;

evacuating the accumulated pus or blood, searching for the primary seat of the disease—tube, appendix, etc.—and removal of it; thorough irrigation of the pelvis and belly, which is not restricted to the close of the operation; and drainage. This is certainly logical and brilliant surgery. Whether it is the most successful, we believe, remains to be seen. It has not been proved that the older methods, of incision through the vagina into Douglas's pouch, or through the abdominal wall when the pus is in relation with it, with irrigation and drainage, should not be employed in many cases. In the latter operations, however, the source of the trouble is usually not reached, and subsequently abdominal section may be necessary with removal of the source of the disease. The abdominal viscera are also left adherent, and the adhesions may subsequently give rise to pain and trouble, or even to intestinal obstruction. But when a case has been allowed to progress without interference until the conditions here alluded to are present, the constitution is likely to be so broken that a bold radical operation is to be avoided, since such a patient is apt to succumb from the shock caused by prolonged manipulations.

The newer method of treatment outlined in the first part of this article we believe can be traced to Tait; it is now practised by his disciples in this city, especially in what Parvin has styled the "Philadelphia Dispensary School of Abdominal Surgery." In the future such cases will not be so common—asepsis in obstetrics, and more correct views concerning gonorrhœa will lessen the frequency of salpingitis, and pus-tubes will be removed early, and not be allowed to infect the peritoneum.

Martin, of Berlin, has treated some cases of intra-peritoneal accumulation of pus in which adhesions were formidable by vaginal drainage. Abdominal section was done to make diagnosis exact, and to assist in guiding the trocar from the vagina into the abscess, avoiding at the same time the puncture of important viscera. By draining through the vagina the peritoneal cavity is saved a deluge of pus, and by having one hand in the belly the operator is enabled to use the trocar with safety. That there are disadvantages pertaining to this method is evident, but at the same time it appears to be a resource of value in only a limited class of cases. Gill Wylie states that in cases in which there has been evidence of extreme virulence of the accumulated pus, he has operated by this method for some years.

There is a disposition on the part of many to deny the occurrence of abscess of the pelvic cellular tissue, except as a complication of pyo-salpinx, brought about by leakage of pus from the tube into the cellular tissue of the broad ligament. That the latter sometimes happens is doubtless true, but further evidence will have to be adduced to overthrow the generally received and more rational view that both pyo-salpinx and abscess of the pelvic cellular tissue are brought about by the same cause, traveling along the endometrium to the tube, in the one case, and along the pelvic lymphatic vessels in the other. These cases are usually caused by sepsis after labor or abortion, especially when there is injury to the cervix and vagina. The proper treatment for them is unsettled. The question is, whether it is best to drain the abscess of the parametrium through the vagina, with subsequent removal of the tubes if necessary, or to remove the tubes by abdominal section, empty the pus-pockets in the parametrium into the peritoneal cavity, and trust to irrigation and drainage. This last is quite frequently done with apparent impunity.

There is a growing number of surgeons who deny that abscess of the parametrium occurs except as a great rarity. Bernutz denied its occurrence except as a rare post-puerperal condition. Matthews Duncan regards it as not common. Still there is no doubt that abscess of the pelvic cellular tissue does occur, and without pyo-salpinx

as a complication. The discussion on pelvic abscess at the last meeting of the American Gynecological Society, and the American Association of Gynecologists and Obstetricians was opportune. We think that emphasis should be laid upon the fact that every inflammatory lump in the pelvis is not a pyo-salpinx, as is the growing fashion of to-day to assert. The treatment of abscess of the pelvic cellular tissue is plain. Pus here, as elsewhere, should be evacuated early. Were this done, the pus would not discharge by the bowel or bladder or into the cavity of the peritoneum. When the abscess is low in the pelvis it should be opened from the vagina, the vaginal wall slit, the director introduced into the abscess, its track enlarged with the dilator, a drainage tube introduced, and irrigation practised. The ureter and bladder are to be avoided. Abscesses located high up in the pelvis, usually in front, are apt to be mistaken for the more common intra-peritoneal abscess. If tumefaction of the abdominal wall is present, the abscess may be opened by careful dissection, with little risk of opening the peritoneal cavity. At times it is well to make a counter opening into the vagina. Drainage and irrigation complete the cure. When pelvic hematoma suppurates, the treatment is the same. When the abscess is situated deep in the pelvis the diagnosis will incline to intra-peritoneal abscess. These cases may be treated by the method employed by Parish: abdominal section is done, the diagnosis settled, a second incision made parallel to Poupart's ligament, the peritoneum, if encountered, pushed aside, as in the operation of laparo-elytrotomy, the abscess reached, evacuated, irrigated and drained. The finger is used within the peritoneal cavity as a guide, while making the second incision. Care is taken to prevent the entrance of pus into the peritoneal cavity.

—Diphtheria is prevalent in Unionville, Tuscola Co., Mich.

Book Reviews.

[Any book reviewed in these columns may be obtained upon receipt of price, from the office of the Reporter.]

THE DISPENSATORY OF THE UNITED STATES OF AMERICA. By Dr. George B. Wood and Dr. Franklin Bache. Sixteenth Edition, with illustrations, re-arranged &c., by H. C. Wood, M.D., LL.D., Joseph P. Remington, Ph.M., F.C.S., and Samuel P. Sadtler, Ph.D., F.C.S. 8vo, pp. xiv, 2091. Philadelphia: J. B. Lippincott Co., 1888. Price, $7.00.

The last edition of the United States Dispensatory is a huge volume of over two thousand pages, containing the information for which it is well known, and with improvements necessitated since the issue of the fifteenth edition. This is a book which is invaluable to druggists and of great value to physicians. The later editions have shown great advances over the previous ones in the character of illustrations and completeness of information conveyed. This edition reflects very largely the opinions in regard to therapeutics of that one of the editors who is not only a practitioner of medicine but also Professor of Therapeutics in the University of Pennsylvania. The pharmaceutical part has been specially watched over by Professor Remington, and is admirably done. The same may be said in regard to the work of Dr. Sadtler, who has treated the chemical side of the subject. As a whole, this edition is a worthy successor of its predecessors, and fully maintains the reputation which they have acquired.

Pamphlet Notices.

[Any reader of the Reporter who desires a copy of a pamphlet noticed in these columns will doubtless secure it by addressing the author with a request stating where the notice was seen and *enclosing a postage-stamp.*]

167. Impure Sexual Intercourse the Primitive Cause of Syphilis, Scrofula, and Phthisis. By William B. Dewees, M.D., Salina, Kansas. From the *Medical Register*, September 22 and 29 and October 6 and 13, 1888. 30 pages.

168. A Case of Poisoning by Sulphate of Atropia; Recovery. By Llewellyn Eliot, M.D., Washington, D. C. From the *Journal of the American Medical Association*, Sept. 1, 1888. 8 pages.

167. The writer of this pamphlet holds extreme views as to the dependence of strumous and tuberculous diseases upon syphilis, and cites a number of authors who lend more or less sanction to his opinion; but his argument is too discursive to be interesting, and too loose to be conclusive.

168. Dr. Eliot reports a case of poisoning with atropia sulphate, in which a solution containing about four grains was taken at one draught. He saw the patient, a woman 26 years old, an hour afterward, and succeeded in saving her life by giving 1½ grains of morphia hypodermically in an hour and twenty minutes, when symptoms of opium narcosis came on, and coffee and citrate of caffeine were given. Dr. Eliot gives a *résumé* of thirty-two recorded cases of atropia poisoning, in which it is deserving of note that only two of the victims died. His pamphlet is both interesting and instructive. Those who read it will probably think the dose of apomorphia given was too small to be of service.

CORRESPONDENCE.

Homœopathy.

TO THE EDITOR.

Sir: The exceedingly charitable Editorial in the REPORTER for Oct. 6, concerning the late meeting of the Homœopathic State Medical Society and the address of its President, led me to believe, at the time, that the medical *millennium* was rapidly approaching, and that very soon the "lion would lie down with the lamb," etc. But a copy of this delectable address has sadly dispelled this happy illusion. Indeed I could hardly believe that the editor had read more of this address than the remarkable utterances quoted. *They* do certainly indicate an "advanced mental attitude," but they are strikingly inconsistent with the rest of the address.

He had scarcely voiced the opening sentences, when he begins to laud "Hahnemann in his inimitable organon," and says: "*The law of similars which he gave us, we can all stand firmly and unitedly on these bases.*" Then very soon follows those propositions of Prof. Thomas's, which he also affirms, and which have led to the optimistic Editorial referred to. There is scarcely anything else in this address which can be commended. It is as dogmatic and exclusive as Hahnemann himself could have desired, with this exception.

He continually speaks of the regular practice as a "sect." "For surely if there be a sect in medicine, it is the so-called *regular* sect." In your Editorial you refer to those "who are *suspected* of using the name of homœopath for purely commercial reasons." The President of the State Homœopathic Medical Society is "above any suspicion" of that kind, and boldly proclaims that "*the name* certainly has brought us patients." He evidently sees no reproach in that.

A large part of his address is taken up in endeavoring to establish a claim to State recognition in one or more of our hospitals for the insane, and in proving (to his own satisfaction) by "statistics," the superior results attained by homœopathists in such institutions. And then he stands off and inquires: "Is there *any* science in old-school medicine in Pennsylvania?"

Taking the address as a whole, it sadly disappoints our expectations after reading your Editorial with those isolated quotations.

No wonder Dr. Hammond speaks of homœopathy as that "unspeakable nonsense."

It is only a "delusion and a snare," even with its *mixed* practice, "and that continually."

Yours truly,

E. V. SWING, M.D.

Early Signs of Pregnancy.

TO THE EDITOR.

Sir: After reading an Editorial in the REPORTER, November 24, 1888, entitled "Early Signs of Pregnancy," I write to give my testimony as to the reliability and value of the second method of diagnosis there described. During my connection with the Philadelphia Lying-in Charity I have many times (how often, I really do not know) had occasion to make a diagnosis of pregnancy prior to the end of the third month of gestation. This method of diagnosis so far has stood me in good stead, as—so far as I know—no error has been made. In most instances, subsequent events proved the correctness of the opinion given, as these women remained under treatment for vesical irritation, nausea or other disorders of pregnancy until the diagnosis could be confirmed by hearing the fœtal heart or obtaining *ballottement*, or else they subsequently entered the wards of the hospital for delivery or were delivered in the out-patient service of the institution.

The same results have been obtained in private practice. In a number of cases of pregnancy occurring during lactation it has been possible by this method to determine the cause of the failing health of the nursing child. Some young women, who have sought treatment for suppressio mensium, have been advised to enter the state of matrimony after a diagnosis of pregnancy had been made by this method. Unless the symptoms or circumstances related to me have pointed strongly toward pregnancy, the diagnosis naturally has been made after a course of treatment with iron and laxatives. Sometimes the guilty expression of the girl has led me to say that it was best to determine whether there existed any local cause for the suppression before beginning treatment.

The sensations perceived by the examiner, when the pregnancy is advanced to or beyond

the sixth week, are so plainly described in the Editorial that it is superfluous to describe them here. Perhaps, however, too much stress has been laid upon the jutting-out of the anterior wall of the body of the uterus over the cervix, and too little upon the jutting-out of the lateral walls. The illustration used by Grandin—the fat-bellied jug—to describe the relation between the cervix and body is a good one. This, however, is only a partial illustration. It seems to me that the whole condition can be pictured better to the mind if we imagine a sphere to rest upon the end of a cylinder in such a way that the axis of the sphere and that of the cylinder form an obtuse angle. The sphere represents the corpus, the cylinder the cervix, and the angle, the junction between the two—the angle is directed posteriorly as the pregnant uterus during the early months is normally in a state of quite marked anteflexion.

It seems to me that this method of diagnosis is a boon to everyone who treats diseases of women. Oftentimes women present themselves for treatment having a uterus enlarged from subinvolution, hyperplasia, or a fibroid tumor, and it is important that the practitioner be able to differentiate these conditions from early pregnancy. Moreover there is reason to believe that not a few women are aware that the "long, slim instrument," which many practitioners habitually use (innocently, of course) to determine the position and size of the womb, effectually solves the problem for them as to how they shall limit the increase of their family. On more than one occasion I have had reason to feel thankful that I have been put on my guard by this characteristic shape of the uterus, and have resisted the temptation to explore the uterine cavity of women who have complained of symptoms apparently due to disease of the endometrium.

This method of diagnosis I followed for a long time, in common with most other Americans, with the thought that it was the method of Hegar. Thanks to Drs. Bond, Jaggard, and some others, this error has been pointed out.

I have had no experience in the diagnosis of pregnancy by the method of Hegar, but shall make use of it in any case in which the diagnosis remains in doubt after the usual means have been employed.

Yours truly,

CHARLES P. NOBLE, M.D.

Philadelphia,
Dec. 12, 1888.

NOTES AND COMMENTS.

Creolin in Obstetric Practice.

Dr. Minopoulos has recently communicated to the Munich Gynecological Society (*Münchener med. Wochenschrift*, No. 45) the results obtained by Prof. Winckel in the employment of creolin in obstetric practice. One hundred and forty cases were treated with it; at the beginning a one-half per cent. solution of creolin was used, and subsequently a one and two per cent. solution in a quart of luke-warm water as a vaginal douche. The vagina was washed out before and immediately after the birth of the child, but this was only done in the lying-in period, when there was a febrile temperature, and then twice daily. Slight burning was produced by the injection, especially after delivery, evidently depending upon the antiseptic coming in contact with lacerations of the mucous membrane produced in parturition. The hands and instruments were disinfected with creolin before every examination. Two of the one hundred and forty patients experimented on were affected with severe sepsis, and one died; 19 were slightly septic. Both of the septic patients had been examined outside of the hospital; and in both one per cent. creolin solution was employed only in the lying-in period, not before nor immediately after labor. The failure in these two cases is therefore not chargeable to creolin. Two of the remaining 19 patients were examined in the city and were probably infected when they came into the hospital. This leaves 17 cases which were infected to a slight degree.

On the other hand, among 140 patients treated with corrosive sublimate as a control experiment, three suffered with severe sepsis, of whom one—infected outside the hospital—died, and 13 with slight sepsis. The results obtained with creolin are at least as favorable, if not more favorable, than those obtained with corrosive sublimate. A one per cent. solution of creolin gave brilliant results in a case of abortion with fetid discharge.

Ulcers of the vagina cauterized with concentrated creolin solution healed more quickly than they do under the application of perchloride of iron. Creolin is therefore a valuable substitute for corrosive sublimate and carbolic acid, as it possesses at least in equal degree the advantages of the latter without their peculiar disadvantages.—*Wiener med. Presse*, Nov. 25, 1888.

Creolin as an Antiseptic.

A detailed series of experiments has recently been made in the Vienna Hygienic Institute by Eisenberg on the antiseptic properties and practical utility of creolin. The experiments were performed by mixing a certain percentage of the antiseptic with bouillon-cultures of organisms, from which mixture, after a certain time, the presence of living bacteria was tested by a fresh cultivation free from creolin. It was found that a 2 per 1,000 mixture of creolin killed the cholera bacillus and the streptococcus of pus and of erysipelas within two minutes; the bacillus of anthrax was killed in five minutes, while the typhoid bacillus and the staphylococcus of pus were still alive after one hour. This last organism, as well as tetragenes, was killed in ten to fifteen minutes by a two per cent. mixture. Compared with carbolic acid, it was found that a three per cent. mixture of creolin killed the spores of the anthrax bacillus in two days; a six per cent. mixture within twenty-four hours; while a carbolic acid mixture up to eight per cent. had no effect on the spores within seven days. A similar comparative result was obtained with the hay bacillus, and the superiority of creolin over carbolic acid was further shown by its greater power in preventing the growth of organisms in cultures. Creolin is not poisonous, as it may be given in large doses to dogs without deleterious effect. Eisenberg advises its use in surgery in place of corrosive sublimate, carbolic acid, and iodoform. Spath has strongly recommended its use. He has applied it in the form of emulsion or a creolin gauze, and found that it stimulates the growth of granulations, and aids in separating sloughs without the production of any toxic symptoms. The urine does not present the green color of carbolic acid urine, but tribromophenol may be separated from it on the addition of hydrochloric acid and bromine water.—*British Med. Journal*, Nov. 10, 1888.

Poisoning With Oil of Sassafras.

Dr. L. M. Albright, of Houston, Ohio, communicates a case of this kind to the *Cincinnati Lancet-Clinic*, Dec. 8, 1888. Geo. G., a German, 18 years old, took by mistake a teaspoonful of oil of sassafras. He noticed in a few minutes strange feelings about the head. In half an hour he had hallucinations (declared he was in heaven) and occasional vomiting. Half an hour later he became unconscious; vomiting continued when he was disturbed or on any exertion, and was followed by great prostration and relaxation. Two hours after taking the oil the extremities were cold; the radial pulse could be detected with difficulty. The patient continued in this way until Dr. Albright's arrival, two hours later.

At this time he found the patient with pupils somewhat dilated; pulse at wrist barely perceptible; respiration twelve per minute; extremities cold. He could be roused with difficulty, but was incapable of comprehending or answering questions or of recognizing anyone. On attempting to administer some egg albumen, vomiting was induced. Dr. Albright could detect barely a trace of the odor of the oil, and concluded that it was for the most part ejected from the stomach. The vomited matter contained abundance of very tenacious mucus. Concluding that the violence of the storm had passed, he ordered quiet, with heat to extremities, and egg-nog. The patient regained complete consciousness by midnight, and was ready for breakfast in the morning, and with the exception of feeling a "little weak" made no further complaint.

The effect of the oil seemed to resemble very closely that produced by some of the strong narcotics.

Adulteration.

According to the Massachusetts Adulteration Act, an article of food is deemed to be "adu terated" within the meaning of the act:

1. If any substance or substances have been mixed with it so as to reduce or lower or injuriously affect its quality or strength.

2. If any inferior or cheaper substances have been substituted wholly or in part for it.

3. If any valuable constituent has been wholly or in part abstracted from it.

4. If it is an imitation of, or is sold under the name of, another article.

5. If it consists wholly or in part of a diseased, decomposed, putrid, or rotten animal or vegetable substance, whether manufactured or not, or in the case of milk, if it is the product of a diseased animal.

6. If it is colored, coated, polished or powdered, whereby damage is concealed, or if it is made to appear better or of greater value than it really is.

7. If it contains any added poisonous ingredient, or any ingredient which may render it injurious to the health of a person consuming it.—*American Analyst*, Dec. 1, 1888.

Butyl-Chloral in Trigeminal Neuralgia.

There are only a few remedies which exercise their action upon one nerve alone. According to Liebreich (*Therapeutische Monatshefte*, Nov. 1888) butyl-chloral is one of these; in doses of from 15 to 45 grains it produces anæsthesia of the trigeminal nerve. Liebreich has convinced himself of this in tic douloureux. Unfortunately it is not lasting in its effect, and large doses produce sleep. It is very serviceable, however, in neuralgia of the trigeminus in which the pain is not chronic. Rheumatic face-ache, pains occasioned by injury, toothache, either from an inflammation of the pulp or from periostitis, may be obviated by the use of butyl-chloral. He has used butyl-chloral with much satisfaction also in cases in which at the begining the filling of a tooth has exerted painful pressure.

The drug is disagreeable in taste and difficultly soluble. The following prescription for its use is suggested:

Butyl-chloral	gr. xxx–lxxv
Spiritus vini rectificat. . . .	♏cl
Glycerini	f℥v
Aquæ destil.	f℥iii ℥vi

M. Sig. Take three or four tablespoonfuls at once.

The size of the doses is to be regulated by the intensity of the pain and by the condition of each individual patient.—*Wiener med. Presse*, Nov. 25, 1888.

Removal of Subplantar Corns.

Unna (*Monatshefte für prakt. Dermatologie*, No. 13, 1888) states that the treatment of subplantar corns is very much facilitated by a judicious combination of salicylic plaster and glycerine jelly. A ring of glycerine jelly about the diameter of the wart is painted round it with a fine but stiff bristle paint-brush. When this ring of jelly has quite set and become dry, a circular piece of the strongest salicylic-plaster muslin (salicylic acid and creasote, each 40 parts) is cut sufficiently large to fit within the ring of jelly; jelly is now painted over the ring of jelly already made, and the piece of plaster itself; and to make assurance doubly sure, a third coat of jelly should be painted widely over all; and when these have become almost dry, a layer of cotton wool is to be placed and pressed on. The larger the surface covered with the jelly the less the local pressure on the corn. In the case of feet which perspire much, especially in hot weather, a single turn of a soft muslin bandage should be folded round the affected part of the foot, before the jelly has become quite dry, covered with a coating of jelly and then with wool, or a coating of the jelly itself, and the neighboring part of the foot painted with flexible collodion. In this way one can keep the plaster in position, even in the heat of summer and in those whose feet sweat freely. The dressing is changed when it becomes spontaneously loose—at the oftenest, once or twice a week; the horny layer acted on by the salicylic acid is removed, and a new dressing applied; and this had better be continued for some time after the wart has been cured.—*Edinburgh Med. Journal*, Dec. 1888.

The Flesh-hooks of Science.

At the meeting of the Edinburgh Chemists' and Apprentices' Association, Oct. 24, 1888, the President, Mr. George Coull, in the course of his address, said: Dr. Lauder Brunton likens the action of drugs on the human body to the action of a man trying to transfix with a flesh-hook various pieces of meat in a pot. It was the custom of the sons of Eli, when they were priests in Shiloh, to send their servant with a flesh-hook having three prongs, which he struck into the pot of any man who was offering up a sacrifice; and all that the flesh-hook brought up the priest took for himself. Now, it would depend on the contents of the pot and the kind of hook employed what the priest's man brought up. With the small pots they were likely to have in Shiloh it would not matter what kind of shank was used; but in larger pots it would matter very greatly, for with a short handle one would not reach the nice pieces lying in the middle of the pot, while with a long one the hooks would go plunging right through to the other side. Let us look at the action of the chlorides of sodium, potassium, and rubidium. Let the metal represent the shank, and the chlorine the hook. Sodium has the atomic weight 23, and is too short to reach the important parts to be got hold of; rubidium equals 85, and is therefore too long, going right through them without laying hold of any; while potassium equals 39, and is just the proper length. Now, what do we find in reality? Why, that the chlorides of sodium and rubidium circulate in the blood without doing any harm, while chloride of potassium is a powerful muscular poison. This is attributed to the differences in the atomic weights. The periodic law which states that elements with similar chemical and physical properties occur at regular

intervals will probably greatly assist in determining what bases to use for certain purposes, as it is not too much to suppose there will be a physiological connection between them as well.

Again, suppose the nature of the hook were changed, then you would get hold of different pieces of flesh, according as it was blunt or sharp. Let bromine or iodine replace the chlorine, and note the effect. The chlorides circulate in the blood without producing any ill effects, so far as the chlorine is concerned. Bromine, representing a sharper hook, acts on the blood and nerve-centres, *e. g.*, bromide of sodium is given in sea-sickness, and bromide of potassium as a sedative when the brain is excited. Iodine, representing a still sharper hook, tends to affect the muscles and glands, *e. g.*, iodide of potassium is prescribed in chronic rheumatism, and iodide of sodium in glandular swellings.—*Chemist and Druggist*, Nov. 3, 1888.

Capillary Aspiration of the Bladder.

This was one of the subjects brought before the Society of Naturalists, at Cologne, by Drs. Rosenberger, of Würzberg, and English, of Vienna. The first speaker remarked it was a procedure warmly recommended by Lücke, and he wondered that it was so little practised. The operation was easily performed. Any kind of aspirator could be used, and a fine needle no thicker than an ordinary knitting-needle passed into the bladder above the symphysis in the linea alba. When all the fluid was evacuated the canula should be removed, with a sudden jerk. By this means no bleeding took place, especially if care was taken to keep the sides of the canal together until they adhered. Of course all antiseptic precautions should be made use of. In old people it was sometimes necessary and frequently useful. It often happened that when aspiration had been performed two or three times the patient could micturate naturally, or a catheter could be introduced, when before such a thing was impossible. It was a procedure generally indicated in retention of a passing character, and when catheterization set up violent hemorrhage from the urethra. The pain from the operation was slight, frequently less than was caused by introduction of a catheter. Dr. English, of Vienna, said he had never practised capillary aspiration of the bladder, and criticized the procedure adversely as both unnecessary and dangerous.—*Medical Press and Circular*, Nov. 7, 1888.

Case of Sciatica Treated with Large Doses of Antifebrin.

In the *Medical Record*, Dec. 1, 1888, Dr. Austin Flint communicates the notes of a case of sciatica treated by him at Bellevue Hospital. The pain was so severe that the patient had been confined to bed for three weeks. He had been treated with blisters, iodine, and a variety of internal remedies. Electricity had been tried before his admission to the hospital, but this gave no relief. In the hospital he was subjected to the treatment with flowers of sulphur externally applied, and also had the nerve stretched, but with no relief. Antifebrin was then given in as large doses as the patient could bear. Fifty grains were given in four hours. The patient became somewhat cyanotic, and a half-ounce of whiskey was given with the last dose. The pain was nearly, but not entirely, relieved, and the next day the antifebrin was again given in the following doses: 10 A.M., twenty grans; 12 M., twenty grains, making 40 grains in two hours. It was not necessary to give whiskey. The following day the pain was completely relieved, and the patient walked about the ward without difficulty. In two days more the patient insisted on leaving the hospital. He promised to report if the pain should return, but though 2½ months had elapsed up to the time of Dr. Flint's report, nothing had been heard of the patient.

Choroido-Retinitis an Early Sign of Cerebral Syphilis.

At the meeting of the Berlin Medical Society, October 11, 1888, Dr. Ostwalt sought to show that choroido-retinitis is the first sign of cerebral syphilis, and that for this reason it deserves the most careful attention on the part of ophthalmologists. He referred to five observations in which specific treatment had produced complete recovery. The disease has, he says, nothing in common with syphilitic iritis. If by chance the two affections should co-exist in the same person, each preserves its independence. In the retina the disease involves the vascular layer and the terminal arteries. As the arteries of the retina are the terminal arteries of the internal carotid, it can be understood how they may become diseased simultaneously under the influence of syphilis; and also the relation that exists between the syphilitic choroido-retinitis and syphilis of the arteries of the brain is explained.—*Bulletin Médical*, October 21, 1888.

NEWS.

—According to the decision of Internal Revenue Commissioner Miller, artificially colored butter is liable to the same tax as oleomargarine—two cents a pound.

—The total number of professors, lecturers and instructors at the University of Pennsylvania, as given in the catalogue, is 169, an increase of 17 over last year; while the total number of students is 1222, as against over 1187 in the preceding term. The annual catalogue of Harvard University shows 1899 students; last year, there were 1612.

—The Editor of the *Journal of Cutaneous and Genito-Urinary Diseases* announces that beginning with the January number the magazine will be published by D. Appleton & Co. No essential change will be made in the style or appearance of the *Journal.* All arrears should be sent to Wm. Wood & Co., and all renewals and subscriptions for the new volume to D. Appleton & Co.

—The *New Orleans Med. and Surgical Journal,* Dec., 1888, says that Dr. J. P. McGee, who was charged last September with an attempt to forge a diploma of the Memphis Hospital Medical College, was unanimously expelled from the Tri-State Medical Association at its meeting in Memphis, Nov. 14, 1888. The accused had engaged a stencil-cutter to make a seal in imitation of that of the College.

—The unexpected prevalence of typhoid fever in some quarters of New York, relates the *Tribune,* has been curiously illustrated in the cases of Drs. W. J. Martin and Frank B. Carpenter, both of whom are lying ill with this malady at the New York Hospital. Dr. Martin has been employed at the hospital for a year, and assumed charge of the institution on December 1, the day he was taken ill. Dr. Carpenter was brought there from his office near by.

—The students of the Medical Department of the University of the City of New York are in a state of mutiny against the Faculty because their instructor in anatomy, Dr. Weisse, who is a great favorite with them, has not been raised to the Chair of Anatomy, which has just become vacant. They declare that one-half of their number will leave the college unless justice be done to Dr. Weisse, who has been connected with the University for 25 years. The Faculty say that the vacant chair will be filled by competitive examination, at which Prof. Weisse may attend as an applicant if he desires.

HUMOR.

YOUNG HOUSEWIFE (to husband who says he knows how to cook)—"How long do you broil a chicken, Edwin?" Edwin—"Oh—er—how long is the chicken?"—*Life.*

WHAT THEY THINK OF EACH OTHER.—"What is the difference between the allopaths and the homœopaths?" asked Mrs. Ceemso of her husband. "Oh," he replied, "the allopaths think the homœopaths are not ortho-docs."—*Life.*

A STOUT ELDERLY LADY was hanging by a strap and casting black looks at an inoffensive but ungallant dude, who sat sucking the head of his cane; a sudden lurch of the car flung the lady upon him with great force. "Say, dash it, don't you know," exclaimed the youth, "you've crushed my foot to a jelly?" "It's not the first time I've made calf's-foot jelly," retorted the woman, severely, as he vanished and she prepared to sit down.—*Shoe and Leather Reporter.*

PROFESSOR OF MATERIA MEDICA (lecturing on tannin)—"And, by the bye, gentlemen, tannic acid is the antidote to the poison of mushroom; can any of you explain its action?" Texas student—"T-t-think I can, professor!" "Well, sir, explain to the class the chemical reactions that occur, and how tannin acts as antidote to the poison of the poisonous mushroom." "It f-f-forms the t-t-tannate of m-mush, and leaves room in the s-s-stomach!"—*Daniel's Texas Med. Journal.*

"ENGLISH AS SHE IS WROTE."—As an example of "English as she is wrote," the following specimen from *American Notes and Queries* is exceedingly amusing: The "Proliferous Top" is accompanied by this set of instructions: "Roll the string in the pulley and draw; put the mother top on the little ones which are scattered about purposely one after the other; it is sufficient for putting them in movement. count number brought. The top goes in every manner that is wished according to the chances of positions or the skill of persons. The proliferous top is not only an attractive toy but it is a healthy and agreeable pass time. Moreover it is the ingenious *worck* of a learned physician who has traveled in various countries, and has for a long time meditated on the causes and effects which have the most influence on human constitution with regards both to health and intelligence."

SUCCUS ALTERANS

(McDADE.)

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica Lappa Minor, Phytolacca Decandra, Smilax Sarsaparilla, and Xanthoxylum Carolinianum, as collected by Dr. Geo. W. McDade, exclusively for Eli Lilly & Co., and endorsed by Dr. J. Marion Sims.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood* and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree; is endorsed by the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides, and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS is giving satisfactory results in treatment of *Chronic Rheumatism*, and can be used with confidence.

SUCCUS ALTERANS may be given for any length of time, without injury to the patient.

SUCCUS ALTERANS is put up in pint round amber bottles, and *never in bulk.*

PHYSICIANS who have not received Dr. McDade's latest publication, the Monographia Syphilitica, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. Goodwillie, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

ELIXIR PURGANS.

Elixir Purgans (Lilly) reliably stimulates the dormant liver without undue irritation, and has gentle yet positive effect upon the alimentary tract. In Habitual Constipation, so common in Women and Children, it will be found particularly useful. Its endorsement at Bellevue and many other prominent hospitals East and West, as well as its employment in general practice by the most eminent medical men, confirms the experience of years in its use.

Each Teaspoonful Represents

Rhamnus Purshiana, -	**10 grs.**
Euonymus Atropur., - -	**8 grs.**
Cassia Acutifolia (Purif.)	**10 grs.**
Iris Versicolor, - - -	**4 grs.**
Hyoscyamus Niger, -	**2 grs.**
Aromatics, etc.	

IN PRESCRIBING, PLEASE BE CAREFUL TO WRITE

ELIXIR PURGANS (LILLY),

THAT OTHER PREPARATIONS MAY NOT BE SUBSTITUTED.

HIGHLY RECOMMENDED.

We take pleasure in endorsing the Elixir Purgans (Lilly) as prepared from the above formula, for in it we find a near approach to positive *perfection* in the form of a *Liquid Cathartic*, and, from our experience with the preparation, can highly recommend it to the profession.

SUPPLIED BY ALL DRUGGISTS.

COMPLIMENTARY SAMPLES.

For purifying the atmosphere of the sick-room, for deodorizing and disinfecting the discharges from the sick, for combating contagion, as an antiseptic in the lying-in chamber, and as a general disinfectant for all household purposes, PLATT'S CHLORIDES is now recognized as the standard preparation; and through the kindly interest of the medical profession, coupled with its proved merit, has become established in large demand.

During the past seven years we have personally presented the physicians of the larger cities of the United States samples for test and use, and the result has been so eminently satisfactory, and our solution has become of such sanitary assistance to the doctor, such an aid to the recovery of the patient, and so great a blessing to the attendants, we earnestly desire now to make it known to all who are still unacquainted with it, including particularly the physicians in the smaller cities, towns, and villages, and all points that we can reach by express.

To this end we will, during the next three months, forward by express, *prepaying all charges ourselves*, a full pint bottle of our PLATT'S CHLORIDES to each physician favoring us with name, P. O. address, and express office.

We feel and believe that an odorless and efficient disinfectant is of as great value and usefulness to the doctor of the small place as of the large city, and we trust that the hundreds of worthy practitioners whom we have not hitherto reached we may now hear from.

Yours truly, **HENRY B. PLATT, 36 Platt St., New York.**

N. B.—PLATT'S CHLORIDES is an odorless liquid.
Is indorsed by over 16,000 physicians.
Is used by diluting with from two to twenty parts of water, as may be indicated.
Sprinkled about, leaves no stain or smell.
Is sold by druggists in quart bottles only. Price, 50 cents.
Send for sample, and in doing so mention THE MEDICAL AND SURGICAL REPORTER.

DOCTORS SHOULD PRESCRIBE

Lactated Food when their little patients are poorly nourished. Its base is sugar of milk, it contains no cane sugar or starch, is easily assimilated, and possesses the highest value in nutrients.

LACTATED FOOD

is the safest food in summer for infants and delicate children, and hundreds of eminent practitioners rely upon it as a preventive for infantile summer diseases, and a cure

IN CHOLERA INFANTUM.

A regular size package of Lactated Food will be sent, charges paid, to any Physician who is not yet acquainted with its merits. Correspondence solicited.

WELLS & RICHARDSON CO., Burlington, Vt.

HYDROLEINE

(HYDRATED OIL)

FOR CONSUMPTION and WASTING DISEASES,

Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls equal to 120 Drops, contains:

Pure Cod Liver Oil...80 m. (drops)	Soda.....1.3 Grains.
Distilled Water.....35 "	Salicylic Acid.....1.4 "
Soluble Pancreatin.. 5 Grains.	Hyocholic Acid.....1.20 "

DOSE.—Two teaspoonfuls alone, or with twice the quantity of water to be taken thrice daily after meals.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a modicum of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in results.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph.D., F. C. S., *and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by* G. OVEREND DREWRY, M.D. ***Copies of these works sent free on application.***

SOLD AT ALL DRUG STORES, AT $1.00 PER BOTTLE.

C. N. CRITTENTON,

Sole Agent for the United States. **115 FULTON ST., NEW YORK.**

A sample of Hydroleine will be sent free upon application, to any physician (inclosing business card) in the United States.

St. Louis College of Physicians and Surgeons.

The Ninth Academical year begins on September 1st and terminates on the last Saturday of May prox., comprising preliminary, regular, and spring courses. The first and third optional. The regular session opens on the second Monday of October, continuing twenty weeks. The spring course offers all the opportunities of post-graduate instruction, inclusive of dissection, operations on cadaver, etc. Licensed practitioners by examination before Examining Boards or Boards of Health admitted to the graduating class. *Ad Eundem* degrees granted to graduates of two years' standing by attending portion of regular course, and passing practical examination.

Fees for Academical Year, - - - - - $50.00
Matriculation, - - - - - - - - - 5.00 paid but once.
Graduation Examination, - - - - - - - 25.00 not returnable.

Abundant anatomical material at nominal prices for anatomical, pathological, and operative pursuits. Abundant clinical material in all branches, inclusive. Practical obstetrics.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength and efficacy than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"The most suitable aperient for prolonged use."—Prof. SEEGEN.

"After twenty years' use, I appreciate it as highly as ever."—Prof. VIRCHOW.

TERRACE BANK HOSPITAL FOR WOMEN

(DR. SUTTON'S PRIVATE SANITORIUM).

This institution, remodeled and enlarged, is now open for reception of patients.

It is located on a fashionable avenue in Allegheny City, directly opposite to and in full view of the city of Pittsburgh, Pa. The rooms are large and well ventilated by means of open grates, with natural gas for fuel. None excepting trained nurses are employed. They are under the direct supervision of a competent resident physician. The culinary department is excellent, and the dining-room is managed on the restaurant-plan of small tables and excellent servants. The rooms vary in price from $15 to $35 per week, including the services of nurses and servants, light, and heat. In all cases, the professional fees are $15 per week.

Surgical operations are not included in the above. Drugs and liquors are furnished at cost, and all laundry-work of patients is sent, at their own expense, to the laundries of the city. Dr. Sutton spends the half of every day, viz.: from 1 P.M. to 6 P.M., at the institution. For further information, address the matron,

HYDRONAPHTHOL

ANTISEPTIC, DISINFECTANT, GERMICIDE, AND PRESERVATIVE

This valuable derivative of Coal Tar is no longer an experiment, but has fairly won a permanent place high up in the list of modern **Antiseptics.** After severest tests and experiments in both Hospital and Private Practice, it has been accorded a place second only to Mercuric Bicloride in point of germicidal power, and, being non-poisonous and non-corrosive, it is preferable to that well-known agent for all the purposes for which it is recommended. **HYDRONAPHTHOL** is free from the odor and escharotic properties of Carbolic Acid and other phenols, hence it is a pleasant and valuable **Internal Antiseptic.** Therefore, aside from its value as a general **Antiseptic, Disinfectant, Germicide,** and **Preservative,** it is being used with great satisfaction as an internal remedy in Cancer of the Stomach, Chronic Dyspepsia, Gastritis, Typhoid Fever, and other diseases of the alimentary canal; also in Eneuresis, Cystitis, Rheumatism, and Gout. As a local application, Dr. C. W. Allen, of N. Y., and other Dermatologists of note, have found **HYDRONAPHTHOL** superior to all other remedies in the treatment of Ulcers, Eczema, Scabies, Impetigo, Pruritus, Pityriasis Capitis, Alopecia, Favus, and other skin diseases. It also preserves anatomical and pathological specimens in their natural condition, preventing shrinkage or decay. **HYDRONAPHTHOL** is freely soluble in hot water, alcohol, benzine, and the fixed oils. We supply it in crude form or incorporated in our absorbent cotton gauze, jute, lint, or any dressing that can be rendered absorbent. We also prepare a rubber dermatological plaster containing 20 per cent. **HYDRONAPHTHOL,** as well as a toilet and a medicinal soap containing one per cent. and five per cent. respectively of the drug. A book fully descriptive of **HYDRONAPHTHOL** mailed free to Physicians.

MALTINE.

MALTINE is far superior in nutritive and diastatic value to any Malt Extract manufactured in the World. There is no reconstructive that excels Maltine in Phthisis and many wasting Diseases.

MALTINE in its different forms is the only Malt Preparation we now employ, being so palatable, digestible, and easily assimilated. Of its efficiency in appropriate cases, there is no more doubt in our minds than there is of the curative power of Quinine, Cod-Liver Oil, the Bromides, and the Iodides.

It deserves to stand in the front rank of constructives; and the constructives, by their preventive, corrective, and curative power, are probably the most widely useful therapeutical agents that we possess. PROF. L. P. YANDELL.

MALTINE is a valuable food, a food of priceless value at times of emergency. In fact, in very grave gastric cases, it is a food which may often be resorted to when at one's wits'-end what to do. J. MILNER FOTHERGILL.

Out of fourteen trade samples of Malt Extract examined by Messrs. Dunstan and Dimmock, *only three* possessed the power of acting on starch. These brands were MALTINE, Corbyn, Stacey & Co.'s Extract, and Keppler's Malt Extract.

WILLIAM ROBERTS, M.D. F.R.S.

I have subjected "Maltine" and all other leading "Extracts of Malt" to an exact quantitative comparison of their diastatic activity.

The results demonstrate conclusively the far greater diastatic value of Maltine, and enable me to state, without any qualification whatever, that it far exceeds in diastatic power any of the six preparations of Malt which I have examined.

R. H. CRITTENDEN, *Professor of Physiological Chemistry in Yale College.*

At the International Health Exhibition held in London, England, the only gold medal and the highest award of merit were given to Maltine by a Jury composed of the best chemists in Europe; and recent analysis made by the most reliable authorities in Europe and America prove conclusively that Maltine—in nutritive and diastatic value—is superior to all other Malt preparations now in the market

---

NOTE.—Physicians will observe that Maltine, as now prepared, is not so viscid as formerly made, being of a more fluid consistency; and, while retaining the nutritive and diastatic value which has given it precedence over all other Extracts of Malt, it is rendered entirely agreeable to the taste of the most fastidious, and is more easily administered. As now prepared, we positively guarantee that Maltine will not ferment or congeal in any climate or at any season of the year.

COMPLETE LIST OF MALTINE PREPARATIONS.

MALTINE (Plain).	**MALTINE** with Peptones.	**MALTINE** Ferrated.
MALTINE with Alteratives.	**MALTINE** with Pepsin and Pancreatine.	**MALTO-YERBINE.**
MALTINE with Cod-Liver Oil.	**MALTINE** with Phosphates, Iron,	**MALTO-VIBURNIN.**
MALTINE with Hypophosphites.	Quinine, and Strychnia.	**MALTINE** with Cascara-Sagrada.

Physicians may obtain Maltine from all druggists in every part of the world. In cases where the physician intends to prescribe Maltine, the word "MALTINE" should be written, and not simply the words "Malt Extract" or "Extract of Malt."

Send for Pamphlet giving comparative analyses by 100 of the best Analytical Chemists in this country and Europe.

We will be happy to supply the regular practitioner with eight ounces each of any three Maltine compounds that may be selected from our list, providing he will agree to pay express charges on same.

The Maltine Manufacturing Co.,

Laboratory, Yonkers-on-Hudson. **182 Fulton Street, New York.**

COMPRESSED TABLETS.

WE ask the attention of Physicians to the annexed list of recent additions of Compressed Tablets, as we think all of them are well deserving the careful attention of practitioners. We would be pleased to send to any physician, circular matter, compiled with great care and accuracy, giving therapeutic value and results in a concise form, that we are confident will be of interest, and possibly of advantage, to medical men who have not yet had access to the foreign and home authorities from which we have culled the information we give.

Acid Boracic, ... 5 grs.
Acetanilide, ... 3 and 5 "
Antifebrin, ... 3 " 5 "
Antipyrine, ... 3, 5 " 10 "
Blaud's
Ferri. Sulph. Exsic., 2 grs., Potass. Carb., 1 4-5 grs., Sacch. Alb., 1⅔ grs.
Iodol, ... ½, 1, 2, 3, and 5 grs.
Manganese Binoxide, ... 1 " 2 "
Opium, Camphor and Carb. Ammon., Opium Denarcot. ½ gr., Camphor, 2 grs., Ammon. Carb., 2½ grs.
Quinia Tannate, and Chocolate 1 grain, Quiniæ Tannat. 1 gr., Ext. Cacao, 9 grs.
Quinia Tannate and Chocolate, 2½ grs., Quiniæ Tannat. 2½ grs., Ext. Cacao 7½ grs.
Salol, ... 2½ and 5 grs.
Sodium Succinate, ... 2 " 5 "
Thalline Sulphate, ... 2, 3 " 5 "
Trinitrin (Nitro-Glycerin), 1-20, 1-25, 1-33, 1-50, 1-100, and 1-200 gr.
Terpin Hydrate, ... 2, 3 and 5 grs.

ANTISEPTIC TABLETS.

7.7 Hydrarg. Chlor. Corros., 7.3 Ammonium Chloride.

More than six months since, we sent a circular to the drug trade, stating that we had discontinued the manufacture of the Antiseptic Tablets introduced by us several years since at the suggestion of Dr. Charles Meigs Wilson, of this city. We have, however, received so many letters from physicians urging us to resume the manufacture, insisting that the Tablets prepared by us dissolved more readily and were more satisfactory than any substitute they had been able to procure, that we feel we could not ignore such persistent demands from our medical friends who have found our tablets an absolute necessity. We have therefore concluded to again prepare them, in a building entirely separate from our main establishment, with appliances and admirably devised protection by means of improved respirators, that will completely overcome any harmful effects to those engaged in their manufacture.

Druggists and physicians will be glad to learn that the Tablets as now prepared are perfectly white and free from the coloring-matter that we formerly added. This was done to lessen the danger of their being taken, or used in mistake; to guard against any such possibility, each Tablet, as now made, has the word "POISON" stamped upon it.

JOHN WYETH & BROTHER,

CHEMISTS, PHILADELPHIA.

A Rare Offer.

We want all of our Subscribers to see our = Model Ledger =

So we will send a copy to any paid-up subscriber who will write, saying he will either buy the book when he sees it, or send it back in good order. We will mail a copy in a secure case - in which it can be sent back, if you don't want to keep it.

If you keep it, it will cost just **Four Dollars**: if you send it back the inspection will cost only

Thirty four cents.

and the trouble of remailing it to us:

Write now to

Drs. Randolph & Dulles.

P.O. Box 843. Philadelphia.

CARNRICK'S SOLUBLE FOOD

IS UNLIKE ANY OTHER INFANTS' FOOD THAT HAS EVER BEEN PRODUCED.

THE FORMULA.

Partially Predigested Milk-Solids, 45 parts
Wheat, with the Starch converted into Dextrin, - - 45 parts
Milk Sugar, - - - 10 parts

We do not claim this food to be a "perfect substitute for human milk." But we do claim that **Carnrick's Food approaches nearer to human milk in constituents and digestibility than any other food that has ever been produced,** and that it is the only infants' food that will, without the addition of cow's milk, thoroughly nourish a child from its birth.

We believe that **Carnrick's Food** solves the problem of a reliable substitute for human milk. The Casein of cows' milk, by partial predigestion with freshly made Pancreatine, is rendered as easily digestible by the infant as human milk.

We have never published an analysis of Carnrick's Food "prepared with milk," for, unlike all other foods, it is prepared by the addition of water only, and we base our claim upon the intrinsic value of the food as compared with an equal amount of the solid constituents of human milk. All other analyses or comparisons are misleading. We challenge similar comparisons with any other food, and confidently believe, that if **Carnrick's Food** is depended upon for the nutrition of infants, the great mortality among children will be reduced.

Full information regarding the process of manufacture will be cheerfully furnished, and samples sent free to those who wish to test Carnrick's Food.

REED & CARNRICK,

NEW YORK.

COMPLIMENTARY SAMPLES.

For purifying the atmosphere of the sick-room, for deodorizing and disinfecting the discharges from the sick, for combating contagion, as an antiseptic in the lying-in chamber, and as a general disinfectant for all household purposes, PLATT'S CHLORIDES is now recognized as the standard preparation; and through the kindly interest of the medical profession, coupled with its proved merit, has become established in large demand.

During the past seven years we have personally presented the physicians of the larger cities of the United States samples for test and use, and the result has been so eminently satisfactory, and our solution has become of such sanitary assistance to the doctor, such an aid to the recovery of the patient, and so great a blessing to the attendants, we earnestly desire now to make it known to all who are still unacquainted with it, including particularly the physicians in the smaller cities, towns, and villages, and all points that we can reach by express.

To this end we will, during the next three months, forward by express, *prepaying all charges ourselves*, a full pint bottle of our PLATT'S CHLORIDES to each physician favoring us with name, P. O. address, and express office.

We feel and believe that an odorless and efficient disinfectant is of as great value and usefulness to the doctor of the small place as of the large city, and we trust that the hundreds of worthy practitioners whom we have not hitherto reached we may now hear from.

Yours truly, **HENRY B. PLATT, 36 Platt St., New York.**

N. B.—PLATT'S CHLORIDES is an odorless liquid.
Is indorsed by over 16,000 physicians.
Is used by diluting with from two to twenty parts of water, as may be indicated.
Sprinkled about, leaves no stain or smell.
Is sold by druggists in quart bottles only. Price, 50 cents.
Send for sample, and in doing so mention THE MEDICAL AND SURGICAL REPORTER.

Fels's · Germicide · Soap

This certifies that I am familiar with the composition and method of manufacture of Fels's Germicide Soap, and that it is prepared with Naphthols, Eucalyptol, Methyl Salicylate, together with Mercuric Chloride, the last combined with the soap-mass by a new process which preserves the antiseptic and germicide value.

Actual tests of this soap on culture fluids have shown a direct antiseptic and germicide power.

Clinical and practical instruction in the medical and surgical specialties is afforded to physicians only during the entire year. The College has well-fitted laboratories of pathology, miscroscopy, anatomy, surgery, and electro-therapeutics.

In addition to the clinical facilities of the dispensary, the professors utilize, for purposes of instruction, their services in the Philadelphia, Pennsylvania, Wills, Howard, Episcopal, Presbyterian German, St. Mary's and, St. Christopher's Hospitals.

The Fee for each branch, for six consecutive weeks from date of issue, is $15.00. Any number of branches may be taken. General Ticket for the thirteen clinical courses, for six consecutive weeks, $100.00. Ticket for Summer course, from July 2d to September 15th, $60.00. One month, Summer course, $25.00. One branch, Summer course, $10.00.

L. W. STEINBACH, M.D. Secretary,
At the College Building, N. W. Cor. Broad and Lombard Streets, Philadelphia.

St. Louis College of Physicians and Surgeons.

The Ninth Academical year begins on September 1st and terminates on the last Saturday of May prox., comprising preliminary, regular, and spring courses. The first and third optional. The regular session opens on the second Monday of October, continuing twenty weeks. The spring course offers all the opportunities of post-graduate instruction, inclusive of dissection, operations on cadaver, etc. Licensed practitioners by examination before Examining Boards or Boards of Health admitted to the graduating class. *Ad Eundem* degrees granted to graduates of two years' standing by attending portion of regular course, and passing practical examination.

Fees for Academical Year, - - - - - $50.00
Matriculation, - - - - - - - - - 5.00 paid but once.
Graduation Examination, - - - - - - - 25.00 not returnable.

Abundant anatomical material at nominal prices for anatomical, pathological and operative pursuits. Abundant clinical material in all branches, inclusive. Practical obstetrics.

For announcement and particulars, apply to

WHEELER & EVANS, SOLE AGENTS,
No. 416 Walnut St., Philadelphia

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterat d.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: McARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

Mention this Journal. McARTHUR HYPOPHOSPHITE CO., BOSTON, Mass.

DOCTORS SHOULD PRESCRIBE

Lactated Food when their little patients are poorly nourished. Its base is sugar of milk, it contains no cane sugar or starch, is easily assimilated, and possesses the highest value in nutrients.

LACTATED FOOD

is the safest food in summer for infants and delicate children, and hundreds of eminent practitioners rely upon it as a preventive for infantile summer diseases, and a cure

IN CHOLERA INFANTUM.

A regular size package of Lactated Food will be sent, charges paid, to any Physician who is not yet acquainted with its merits. Correspondence solicited.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains fifteen grains EACH of pure Chloral Hydrat, and purified Brom. Pot, and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam,

Dose.—One-half to one fluid-drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritabilily, etc In the restlessness and delirium of fevers, it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or Pain-relieving principal of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID-DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid-drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid-drachms (more or less, as indicated) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

TERRACE BANK HOSPITAL FOR WOMEN

(DR. SUTTON'S PRIVATE SANITORIUM).

This institution, remodeled and enlarged, is now open for reception of patients.

It is located on a fashionable avenue in Allegheny City, directly opposite to and in full view of the city of Pittsburgh, Pa. The rooms are large and well ventilated by means of open grates, with natural gas for fuel None excepting trained nurses are employed. They are under the direct supervision of a competent resident physician. The culinary department is excellent, and the dining-room is managed on the restaurant-plan of small tables and excellent servants. The rooms vary in price from $15 to $35 per week, including the services of nurses and servants, light, and heat. In all cases, the professional fees are $15 per week.

Surgical operations are not included in the above. Drugs and liquors are furnished at cost, and all laundry-work of patients is sent, at their own expense, to the laundries of the city. Dr. Sutton spends the half of every day, viz.: from 1 P.M. to 6 P.M., at the institution. For further information, address the matron,

MISS KENNEDY,

170 RIDGE AVENUE, ALLEGHENY, PA.

FOR SALE

A physician's residence and office, in good repair. Centrally located in a live railroad-town in Iowa, of 1000 inhabitants. Practice worth $2500 to $3000. Excellent schools and churches, and good society. Satisfactory reason for selling. Correspondence solicited. Address, "IOWA."

J. A. HENDERSON, 2915 Jackson St., Omaha, Neb.

EYE, EAR, AND THROAT.

Good opening for Specialist, in large populous city. Mild climate. Office established several years. Central and convenient. Low rent. Good will and introduction to competent man with proper credentials. Office furniture and fixtures, etc., at value. Present incumbent retiring from practice for a time. A fair income from the start. MALTINE.

MALTINE is far superior in nutritive and diastatic value to any Malt Extract manufactured in the World. There is no reconstructive that excels Maltine in Phthisis and many wasting Diseases.

MALTINE in its different forms is the only Malt Preparation we now employ, being so palatable, digestible, and easily assimilated. Of its efficiency in appropriate cases, there is no more doubt in our minds than there is of the curative power of Quinine, Cod-Liver Oil, the Bromides, and the Iodides.

It deserves to stand in the front rank of constructives; and the constructives, by their preventive, corrective, and curative power, are probably the most widely useful therapeutical agents that we possess. PROF. L. P. YANDELL.

MALTINE is a valuable food, a food of priceless value at times of emergency. In fact, in very grave gastric cases, it is a food which may often be resorted to when at one's wits'-end what to do. J. MILNER FOTHERGILL.

Out of fourteen trade samples of Malt Extract examined by Messrs. Dunstan and Dimmock, *only three* possessed the power of acting on starch. These brands were MALTINE, Corbyn, Stacey & Co.'s Extract, and Keppler's Malt Extract.
WILLIAM ROBERTS, M.D. F.R.S.

I have subjected "Maltine" and all other leading "Extracts of Malt" to an exact quantitative comparison of their diastatic activity.

The results demonstrate conclusively the far greater diastatic value of Maltine, and enable me to state, without any qualification whatever, that it far exceeds in diastatic power any of the six preparations of Malt which I have examined.
R. H. CRITTENDEN, *Professor of Physiological Chemistry in Yale College.*

At the International Health Exhibition held in London, England, the only gold medal and the highest award of merit were given to Maltine by a Jury composed of the best chemists in Europe; and recent analysis made by the most reliable authorities in Europe and America prove conclusively that Maltine—in nutritive and diastatic value—is superior to all other Malt preparations now in the market

---

NOTE.—Physicians will observe that Maltine, as now prepared, is not so viscid as formerly made, being of a more fluid consistency; and, while retaining the nutritive and diastatic value which has given it precedence over all other Extracts of Malt, it is rendered entirely agreeable to the taste of the most fastidious, and is more easily administered. As now prepared, we positively guarantee that Maltine will not ferment or congeal in any climate or at any season of the year.

COMPLETE LIST OF MALTINE PREPARATIONS.

MALTINE (Plain).	**MALTINE** with Peptones.	**MALTINE** Ferrated.
MALTINE with Alteratives.	**MALTINE** with Pepsin and Pancreatine.	**MALTO-YERBINE.**
MALTINE with Cod-Liver Oil.	**MALTINE** with Phosphates, Iron,	**MALTO-VIBURNIN.**
MALTINE with Hypophosphites.	Quinine, and Strychnia.	**MALTINE** with Cascara-Sagrada.

Physicians may obtain Maltine from all druggists in every part of the world. In cases where the physician intends to prescribe Maltine, the word "MALTINE" should be written, and not simply the words "Malt Extract" or "Extract of Malt.'

Send for Pamphlet giving comparative analyses by 100 of the best Analytical Chemists in this country and Europe.

We will be happy to supply the regular practitioner with eight ounces each of any three Maltine compounds that may be selected from our list, providing he will agree to pay express charges on same.

The Maltine Manufacturing Co.,

Laboratory, Yonkers-on-Hudson. **54 Warren Street, New York.**

FELLOWS' HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The essential elements** to the Animal Organization—Potash and Lime.

The **Oxydizing Agents**—Iron and Manganese;

The **Tonics**—Quinine and Strychnine,

And the **Vitalizing Constituent**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desiriable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Third Edition, Revised, Enlarged, Illustrated.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES M.D.

"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

TERRACE BANK HOSPITAL FOR WOMEN

(DR. SUTTON'S PRIVATE SANITORIUM).

This institution, remodeled and enlarged, is now open for reception of patients.

It is located on a fashionable avenue in Allegheny City, directly opposite to and in full view of the city of Pittsburgh, Pa. The rooms are large and well ventilated by means of open grates, with natural gas for fuel. None excepting trained nurses are employed. They are under the direct supervision of a competent resident physician. The culinary department is excellent, and the dining-room is managed on the restaurant-plan of small tables and excellent servants. The rooms vary in price from $15 to $35 per week, including the services of nurses and servants, light, and heat. In all cases, the professional fees are $15 per week.

Surgical operations are not included in the above. Drugs and liquors are furnished at cost, and all laundry-work of patients is sent, at their own expense, to the laundries of the city. Dr. Sutton spends the half of every day, viz.: from 1 P.M. to 6 P.M., at the institution. For further information, address the matron,

MISS KENNEDY,

170 RIDGE AVENUE, ALLEGHENY, PA.

POSITIVE MEDICATION

WITH POSITIVE AND DECIDED RESULTS, BY THE EMPLOYMENT OF THE

Viburnum Compound of Dr. Hayden

IN

Female Disorders

AND ALL SPASMODIC AFFECTIONS OF BOTH SEXES

TWENTY-TWO YEARS before the profession, without accident or complaint. Absolutely safe and free from all NARCOTICS or poisons—prompt and reliable in its action with no unpleasant sequelæ.

THE VIBURNUM COMPOUND of Dr. Hayden is employed in the leading hospitals and remedial institutions and by the most eminent physicians and gynæcologists with marked success.

We have the testimonials of

FIVE THOUSAND PHYSICIANS

testifying to the great merits of the VIBURNUM COMPOUND of Dr. Hayden—more than were ever given before for any special remedy in the world. Dispensed by all reliable Apothecaries, put up in 4 oz., 10 oz., and 16 oz. bottles.

For formula, report of cases, treatment, special directions, and much other interesting matter, and the written testimonials of

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterated.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: McARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

Mention this Journal. McARTHUR HYPOPHOSPHITE CO., BOSTON, Mass.

Fels's · Germicide · Soap

This certifies that I am familiar with the composition and method of manufacture of Fels's Germicide Soap, and that it is prepared with Naphthols, Eucalyptol, Methyl Salicylate, together with Mercuric Chloride, the last combined with the soap-mass by a new process which preserves the antiseptic and germicide value.

Actual tests of this soap on culture fluids have shown a direct antiseptic and germicide power.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains fifteen grains EACH of pure Chloral Hydrat, and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam,

Dose.—One-half to one fluid-drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritabilily, etc In the restlessness and delirium of fevers, it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or Pain-relieving principal of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID-DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid-drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid-drachms (more or less, as indicated) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

Food in Cholera Infantum
and the
Summer Diarrhœa of Infants.

The food of an infant, ill with cholera infantum or summer diarrhœa, is a matter of the highest importance, and it is now well known that until milk in every form has been strictly excluded from the diet, no relief can be expected. Experience has proved that MELLIN'S FOOD, dissolved in water only, is the best diet in these diseases; given cold and in small amounts frequently repeated, the stomach will retain it without trouble. The great difficulty in the treatment of these complaints is thus immediately overcome, for the child will be nourished and its strength maintained. When convalescence has been established, milk, at first in small amount, can be added to the Mellin's Food, and gradually increased as the child is found to bear it.

A sample of MELLIN'S FOOD, *sufficient for trial, will be sent to any physician upon application.*

DOLIBER, GOODALE & CO., Boston, Mass.

THE DIPLOMA OF HONOR.

NESTLÉ'S FOOD IS

The only infant's food that has ever received 12 Diplomas of Honor.

The only *sound, safe, nutritious* food that is prepared with water alone.

The best safeguard against Summer Complaint and Cholera Infantum.

"The best of all foods for infants."
See Ringer's Hand-book of Therapeutics, 11th ed.

Send for sample to THOS. LEEMING & CO., New York.

IN TREATMENT OF CHOLERA INFANTUM, NESTLÉ'S FOOD IS AN INDISPENSABLE DIET.

SVAPNIA

OR

PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

☞ *AN UNSOLICITED TESTIMONIAL.*

Burlington, Vt., June 14, 1888.

Medical & Surgical Reporter,

Philadelphia, Pa.,

. . . Our opinion of the REPORTER is very favorable, and we have read with much interest its editorials of recent issues. We are glad to take space in a magazine like this, whose editor has such decided opinions and expresses them without fear; for we believe that the constituency of such a journal will always place confidence in the goods which are mentioned in its advertising pages.

Very truly yours,

Wells & Richardson Co.

THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES M.D

"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

HYDRONAPHTHOL

ANTISEPTIC, DISINFECTANT, GERMICIDE, AND PRESERVATIVE

This valuable derivative of Coal Tar is no longer an experiment, but has fairly won a permanent place high up in the list of modern **Antiseptics.** After severest tests and experiments in both Hospital and Private Practice, it has been accorded a place second only to Mercuric Bicloride in point of germicidal power, and, being non-poisonous and non-corrosive, it is preferable to that well-known agent for all the purposes for which it is recommended. **HYDRONAPHTHOL** is free from the odor and escharotic properties of Carbolic Acid and other phenols, hence it is a pleasant and valuable **Internal Antiseptic.** Therefore, aside from its value as a general **Antiseptic, Disinfectant, Germicide,** and **Preservative,** it is being used with great satisfaction as an internal remedy in Cancer of the Stomach, Chronic Dyspepsia, Gastritis, Typhoid Fever, and other diseases of the alimentary canal; also in Eneuresis, Cystitis, Rheumatism, and Gout. As a local application, Dr. C. W. Allen, of N. Y., and other Dermatologists of note, have found **HYDRONAPHTHOL** superior to all other remedies in the treatment of Ulcers, Eczema, Scabies, Impetigo, Pruritus, Pityriasis Capitis, Alopecia, Favus, and other skin diseases. It also preserves anatomical and pathological specimens in their natural condition, preventing shrinkage or decay. **HYDRONAPHTHOL** is freely soluble in hot water, alcohol, benzine, and the fixed oils. We supply it in crude form or incorporated in our absorbent cotton gauze, jute, lint, or any dressing that can be rendered absorbent. We also prepare a rubber dermatological plaster containing 20 per cent. **HYDRONAPHTHOL,** as well as a toilet and a medicinal soap containing one per cent. and five per cent. respectively of the drug. A book fully descriptive of **HYDRONAPHTHOL** mailed free to Physicians.

—SPECIAL FORMULÆ TO ORDER.—

Avoid Cheap Imitations by Always Specifying "SEABURY'S" or "S. & J."

SUCCUS ALTERANS

(McDADE.)

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica Lappa Minor, Phytolacca Decandra, Smilax Sarsaparilla, and Xanthoxylum Carolinianum, as collected by Dr. Geo. W. McDade, exclusively for Eli Lilly & Co., and endorsed by Dr. J. Marion Sims.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood* and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree; is endorsed by the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides, and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS is giving satisfactory results in treatment of *Chronic Rheumatism*, and can be used with confidence.

SUCCUS ALTERANS may be given for any length of time, without injury to the patient.

SUCCUS ALTERANS is put up in pint round amber bottles, and *never in bulk.*

PHYSICIANS who have not received Dr. McDade's latest publication, the Monographia Syphilitica, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. Goodwillie, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

ELIXIR PURGANS.

Elixir Purgans (Lilly) reliably stimulates the dormant liver without undue irritation, and has gentle yet positive effect upon the alimentary tract. In Habitual Constipation, so common in Women and Children, it will be found particularly useful. Its endorsement at Bellevue and many other prominent hospitals East and West, as well as its employment in general practice by the most eminent medical men, confirms the experience of years in its use.

Each Teaspoonful Represents	
Rhamnus Purshiana, -	10 grs.
Euonymus Atropur., - -	8 grs.
Cassia Acutifolia (Purif.)	10 grs.
Iris Versicolor, - - -	4 grs.
Hyoscyamus Niger, -	2 grs.
Aromatics, etc.	

IN PRESCRIBING, PLEASE BE CAREFUL TO WRITE

ELIXIR PURGANS (LILLY),

THAT OTHER PREPARATIONS MAY NOT BE SUBSTITUTED.

HIGHLY RECOMMENDED.

We take pleasure in endorsing the Elixir Purgans (Lilly) as prepared from the above formula, for in it we find a near approach to positive *perfection* in the form of a *Liquid Cathartic*, and, from our experience with the preparation, can highly recommend it to the profession.

COMPLIMENTARY SAMPLES.

For purifying the atmosphere of the sick-room, for deodorizing and disinfecting the discharges from the sick, for combating contagion, as an antiseptic in the lying-in chamber, and as a general disinfectant for all household purposes, PLATT'S CHLORIDES is now recognized as the standard preparation; and through the kindly interest of the medical profession, coupled with its proved merit, has become established in large demand.

During the past seven years we have personally presented the physicians of the larger cities of the United States samples for test and use, and the result has been so eminently satisfactory, and our solution has become of such sanitary assistance to the doctor, such an aid to the recovery of the patient, and so great a blessing to the attendants, we earnestly desire now to make it known to all who are still unacquainted with it, including particularly the physicians in the smaller cities, towns, and villages, and all points that we can reach by express.

To this end we will, during the next three months, forward by express, *prepaying all charges ourselves*, a full pint bottle of our PLATT'S CHLORIDES to each physician favoring us with name, P. O. address, and express office.

We feel and believe that an odorless and efficient disinfectant is of as great value and usefulness to the doctor of the small place as of the large city, and we trust that the hundreds of worthy practitioners whom we have not hitherto reached we may now hear from.

Yours truly, **HENRY B. PLATT, 36 Platt St., New York.**

N. B.—PLATT'S CHLORIDES is an odorless liquid.
Is indorsed by over 16,000 physicians.
Is used by diluting with from two to twenty parts of water, as may be indicated.
Sprinkled about, leaves no stain or smell.
Is sold by druggists in quart bottles only. Price, 50 cents.
Send for sample, and in doing so mention THE MEDICAL AND SURGICAL REPORTER.

Fels's · Germicide · Soap

This certifies that I am familiar with the composition and method of manufacture of Fels's Germicide Soap, and that it is prepared with Naphthols, Eucalyptol, Methyl Salicylate, together with Mercuric Chloride, the last combined with the soap-mass by a new process which preserves the antiseptic and germicide value.

Actual tests of this soap on culture fluids have shown a direct antiseptic and germicide power.

Food in Cholera Infantum
and the
Summer Diarrhœa of Infants.

The food of an infant, ill with cholera infantum or summer diarrhœa, is a matter of the highest importance, and it is now well known that until milk in every form has been strictly excluded from the diet, no relief can be expected. Experience has proved that MELLIN'S FOOD, dissolved in water only, is the best diet in these diseases; given cold and in small amounts frequently repeated, the stomach will retain it without trouble. The great difficulty in the treatment of these complaints is thus immediately overcome, for the child will be nourished and its strength maintained. When convalescence has been established, milk, at first in small amount, can be added to the Mellin's Food, and gradually increased as the child is found to bear it.

A sample of MELLIN'S FOOD, *sufficient for trial, will be sent to any physician upon application.*

DOLIBER, GOODALE & CO., Boston, Mass.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains fifteen grains EACH of pure Chloral Hydrat, and purified Brom. Pot, and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam,

Dose.—One-half to one fluid-drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritabilily, etc In the restlessness and delirium of fevers, it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or Pain-relieving principal of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID-DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid-drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid-drachms (more or less, as indicated) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

TERRACE BANK HOSPITAL FOR WOMEN

(DR. SUTTON'S PRIVATE SANITORIUM).

This institution, remodeled and enlarged, is now open for reception of patients.

It is located on a fashionable avenue in Allegheny City, directly opposite to and in full view of the city of Pittsburgh, Pa. The rooms are large and well ventilated by means of open grates, with natural gas for fuel None excepting trained nurses are employed. They are under the direct supervision of a competent resident physician. The culinary department is excellent, and the dining-room is managed on the restaurant-plan of small tables and excellent servants. The rooms vary in price from $15 to $35 per week, including the services of nurses and servants, light, and heat. In all cases, the professional fees are $15 per week.

Surgical operations are not included in the above. Drugs and liquors are furnished at cost, and all laundry-work of patients is sent, at their own expense, to the laundries of the city. Dr. Sutton spends the half of every day, viz.: from 1 P.M. to 6 P.M., at the institution. For further information, address the matron,

MALTINE.

MALTINE is far superior in nutritive and diastatic value to any Malt Extract manufactured in the World. There is no reconstructive that excels Maltine in Phthisis and many wasting Diseases.

MALTINE in its different forms is the only Malt Preparation we now employ, being so palatable, digestible, and easily assimilated. Of its efficiency in appropriate cases, there is no more doubt in our minds than there is of the curative power of Quinine, Cod-Liver Oil, the Bromides, and the Iodides.

It deserves to stand in the front rank of constructives; and the constructives, by their preventive, corrective, and curative power, are probably the most widely useful therapeutical agents that we possess. PROF. L. P. YANDELL.

MALTINE is a valuable food, a food of priceless value at times of emergency. In fact, in very grave gastric cases, it is a food which may often be resorted to when at one's wits'-end what to do. J. MILNER FOTHERGILL.

Out of fourteen trade samples of Malt Extract examined by Messrs. Dunstan and Dimmock, *only three* possessed the power of acting on starch. These brands were MALTINE, Corbyn, Stacey & Co.'s Extract, and Keppler's Malt Extract.
WILLIAM ROBERTS, M.D. F.R.S.

I have subjected "Maltine" and all other leading "Extracts of Malt" to an exact quantitative comparison of their diastatic activity.

The results demonstrate conclusively the far greater diastatic value of Maltine, and enable me to state, without any qualification whatever, that it far exceeds in diastatic power any of the six preparations of Malt which I have examined.
R. H. CRITTENDEN, *Professor of Physiological Chemistry in Yale College.*

At the International Health Exhibition held in London, England, the only gold medal and the highest award of merit were given to Maltine by a Jury composed of the best chemists in Europe; and recent analysis made by the most reliable authorities in Europe and America prove conclusively that Maltine—in nutritive and diastatic value—is superior to all other Malt preparations now in the market

NOTE.—Physicians will observe that Maltine, as now prepared, is not so viscid as formerly made, being of a more fluid consistency; and, while retaining the nutritive and diastatic value which has given it precedence over all other Extracts of Malt, it is rendered entirely agreeable to the taste of the most fastidious and is more easily administered. As now prepared, we positively guarantee that Maltine will not ferment or congeal in any climate or at any season of the year.

COMPLETE LIST OF MALTINE PREPARATIONS.

MALTINE (Plain).
MALTINE with Alteratives.
MALTINE with Cod-Liver Oil.
MALTINE with Hypophosphites.
MALTINE with Peptones.
MALTINE with Pepsin and Pancreatine.
MALTINE with Phosphates, Iron, Quinine, and Strychnia.
MALTINE Ferrated.
MALTO-YERBINE.
MALTO-VIBURNIN.
MALTINE with Cascara-Sagrada.

Physicians may obtain Maltine from all druggists in every part of the world. In cases where the physician intends to prescribe Maltine, the word "MALTINE" should be written, and not simply the words "Malt Extract" or "Extract of Malt."

Send for Pamphlet giving comparative analyses by 100 of the best Analytical Chemists in this country and Europe.

We will be happy to supply the regular practitioner with eight ounces each of any three Maltine compounds that may be selected from our list, providing he will agree to pay express charges on same.

The Maltine Manufacturing Co.,

Laboratory, Yonkers-on-Hudson. **54 Warren Street, New York.**

FELLOWS' HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The essential elements** to the Animal Organization—Potash and Lime.

The **Oxydizing Agents**—Iron and Manganese;

The **Tonics**—Quinine and Strychnine,

And the **Vitalizing Constituent**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desiriable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Third Edition, Revised, Enlarged, Illustrated.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES M.D.

"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

Sent on receipt of 75 Cents.

SEE OTHER SIDE.

The Sub-Committee of Dietetics

ON

INFANT-FEEDING,

AT THE

American Medical Association, May 9, 1888,

Recommended a formula for an Infants' Food as a very efficient substitute for mothers' milk. This formula closely resembles that of CARNRICK'S FOOD, and no other prepared food in the market can claim a like resemblance.

THE FORMULAS.

℞

Formula Recommended by the Sub-Committee on Infant-Feeding, as above stated.

Desiccated partly peptonized milk in the form of a milk-food, containing partly converted starch (soluble starch or dextrin) and a small quantity of lactose, is a convenient and (when well made) a very efficient substitute for mothers' milk.

Formula for Carnrick's Food.

Evaporated or desiccated milk, partly peptonized and thoroughly sterilized by heat, ... 45 parts.

Dextrin, Soluble Starch and Milk Sugar, ... 55 parts.

This forms a fine dry powder, which will keep in any climate, and only requires the addition of water to render it a suitable nutrient for infants, or adults whose digestive powers have become impaired.

Carnrick's Food contains about five per cent. of fat. This is the largest amount possible to combine in a stable preparation presented in a powdered form. In cases where a larger amount of fat is desirable, a small quantity of cream may be added.

We do not claim this food to be "a PERFECT substitute for human milk."
But we do claim that

CARNRICK'S FOOD APPROACHES NEARER TO HUMAN MILK IN CONSTITUENTS AND DIGESTIBILITY THAN ANY OTHER PREPARED FOOD THAT HAS EVER BEEN PRODUCED,

and that it is the only infants' food that will, without the addition of cows' milk, thoroughly nourish a child from its birth.

We believe that CARNRICK'S FOOD solves the problem of a reliable substitute for human milk. The Casein of cows' milk, by partial predigestion with freshly made Pancreatine, is rendered as easily digestible by the infant as human milk, and, by thorough sterilization with heat, made aseptic, thus avoiding the objection to the use of milk foods in Cholera Infantum.

Full information regarding the process of manufacture will be cheerfully furnished and samples sent free to those who wish to test CARNRICK'S FOOD.

REED & CARNRICK, New York

COMPLIMENTARY SAMPLES.

For purifying the atmosphere of the sick-room, for deodorizing and disinfecting the discharges from the sick, for combating contagion, as an antiseptic in the lying-in chamber, and as a general disinfectant for all household purposes, PLATT'S CHLORIDES is now recognized as the standard preparation; and through the kindly interest of the medical profession, coupled with its proved merit, has become established in large demand.

During the past seven years we have personally presented the physicians of the larger cities of the United States samples for test and use, and the result has been so eminently satisfactory, and our solution has become of such sanitary assistance to the doctor, such an aid to the recovery of the patient, and so great a blessing to the attendants, we earnestly desire now to make it known to all who are still unacquainted with it, including particularly the physicians in the smaller cities, towns, and villages, and all points that we can reach by express.

To this end we will, during the next three months, forward by express, *prepaying all charges ourselves*, a full pint bottle of our PLATT'S CHLORIDES to each physician favoring us with name, P. O. address, and express office.

We feel and believe that an odorless and efficient disinfectant is of as great value and usefulness to the doctor of the small place as of the large city, and we trust that the hundreds of worthy practitioners whom we have not hitherto reached we may now hear from.

Yours truly, **HENRY B. PLATT, 36 Platt St., New York.**

N. B.—PLATT'S CHLORIDES is an odorless liquid.
Is indorsed by over 16,000 physicians.
Is used by diluting with from two to twenty parts of water, as may be indicated.
Sprinkled about, leaves no stain or smell.
Is sold by druggists in quart bottles only. Price, 50 cents.
Send for sample, and in doing so mention THE MEDICAL AND SURGICAL REPORTER.

DOCTORS SHOULD PRESCRIBE

Lactated Food when their little patients are poorly nourished. Its base is sugar of milk, it contains no cane sugar or starch, is easily assimilated, and possesses the highest value in nutrients.

LACTATED FOOD

is the safest food in summer for infants and delicate children, and hundreds of eminent practitioners rely upon it as a preventive for infantile summer diseases, and a cure

IN CHOLERA INFANTUM.

A regular size package of Lactated Food will be sent, charges paid, to any Physician who is not yet acquainted with its merits. Correspondence solicited.

PHILADELPHIA, PA

PROFESSORS.

J. M. DACOSTA, M.D., LL.D., Practice of Medicine.
ROBERTS BARTHOLOW, M.D., LL.D., Materia Medica, etc.
HENRY C. CHAPMAN, M.D., Institutes of Medicine, etc.
SAMUEL W. GROSS, M.D., LL.D., Princ. of Surgery and Clinical Surg.
JOHN H. BRINTON, M.D., Pract. of Surgery and Clinical Surgery.
THEOPHILUS PARVIN, M.D., LL.D, Obstetrics and Dis. of Women, etc
J. W. HOLLAND, M.D., Med. Chemistry and Toxicology.
WM. S. FORBES, M.D., Genl. Descrip. and Surg. Anatomy.
WM. THOMSON, M.D., Hon. Prof. Ophthalmology.

LECTURERS.

O. H. ALLIS, M.D., Orthopædic Clinic.
CHAS. E. SAJOUS, M.D., Laryngological Clinic.
O. P. REX, M.D., Children's Clinic.
ARTHUR E. VANHARLINGEN, M.D., Dermatological Clinic.
JAMES C. WILSON, M.D., Renal Diseases Clinic.
MORRIS LONGSTRETH, M.D., Pathological Anatomy.

DEMONSTRATORS.

A Corps of Eleven Demonstrators and their Assistants.

The Sixty-fourth Annual Winter Session will begin October 1st, 1888, and will continue until April 1st, 1889. Preliminary lectures will be held from September 17th. Two courses of lectures are necessary for a degree. A three years' graded course is also provided. Practical Laboratory instruction is given in all departments without extra charge. General and Special Clinics are given daily at the College Hospital. *With the winter session of 1890 a three years' obligatory curriculum will begin.* For full particulars, send for the Annual Announcement, to

J. W. HOLLAND, M.D., Dean.

SPECIAL ATTENTION OF THE MEDICAL PROFESSION

SUNDERLAND TELEPHONES

PRIVATE LINES—NO ELECTRICITY

Particularly adapted for **Hospitals, Institutions, Hotels, Residences, Etc.** Direct lines of less than five miles. No legal complication. Free from Lightning, with Perfect Enunciation. Cheap and Absolutely Reliable. We submit it to the test of actual use, and a call at our office for purposes of examination is invited at any time.

WHEELER & EVANS, SOLE AGENTS,

No. 416 Walnut St., Philadelphia

FOR THE ILL EFFECTS ATTENDING SUMMER HEAT

«NERVOUS HEADACHES»

INSOMNIA, MIGRAINE, and where your patients are tired, both mentally and physically, due to excessive heat, they will be greatly relieved by a dose or two of

EFFERVESCENT

BROMO

(WARNER & CO.)

SODA

℞ Bromide Sodium, grs. xxx.
Caffein, - gr. i.

In each heaping teaspoonful, to be taken in half a glassful of water and drank while effervescing, forming a delightfully cool and refreshing draught, to be repeated in half an hour if necessary.

☞ Please specify (Bromo-Soda) WARNER & Co., and get the full therapeutic effect, thereby avoiding the substitution of other "Bromos," the composition of which is not known.

Wm. R. Warner & Co.

Originators and Manufacturers of Effervescent Bromo-Soda, Bromo-Potash, and a full line of Effervescent Salts.

INGLUVIN! VENTRICULUS CALLOSUS GALLINACEUS. A powder, prescribed in the same manner, doses, and combinations as Pepsin, used in all cases where Pepsin is required, with superior advantage. A specific in vomiting in gestation, in doses of 10 to 20 grs.

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterated.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: MCARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

Mention this Journal. McARTHUR HYPOPHOSPHITE CO., BOSTON, Mass

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength and efficacy than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"The most suitable aperient for prolonged use."—Prof. SEEGEN.

"After twenty years' use, I appreciate it as highly as ever."—Prof. VIRCHOW.

OF ALL DRUGGISTS AND MINERAL-WATER DEALERS.

YOU WILL FIND **BROMO-CAFFEINE** OF GREATEST SERVICE IN

OF ALL TYPES **NERVOUS HEADACHES** OF ALL TYPES

Headaches from Loss of Sleep, Physical Fatigue, Excessive Study, Mental Anxiety, Neurasthenia, Dysmenorrhœa, Pregnancy, or other Ovarian Irritation. Relieves Insomnia, and is very useful in Asthma, Whooping Cough and Nervous Cough. Prevents Tinnitis Aurium during the administration of Quinine. Cures Sea Sickness, Quiets the Restlessness of Alcoholism, Morphia Craving, &c. Relieves Anxiety and Promotes Sleep.

☞**Avoid and discourage imitations and substitutions.**☜

LENTZ'S
NEW COMPACT
OPERATING SET
No. 10.

One Amputating Knife (Leg and Arm). One Finger Knife. One Hernia Knife. One Sharp Curved Bistoury. Two Scalpels. One Tenotome. One Tenaculum. One pair Scissors, curved or flat. One Saw, 9-inch blade. One Liston's Spring Bone Forceps. One Artery and Needle Forceps, improved. One Dressing Forceps. One Esmarch's Flat Rubber Tourniquets, with Chain. One Director, with Aneurism Needle. Two Silver Probes. Silk, Wire, Wax, and Needles.

The above instruments are put up in a fine Morocco Case with nickel trimmings, lined with velvet, and has extra space for Trephine and Elevator, if desired. With the *sixteen* instruments contained in this case, any ordinary operation may be performed.

Size, 11 in. long, 4 in. wide, 2 in. high.

Price, $25. With Trephine and Handle and Trephine Elevator in addition, $29.65. We also make the above case with hard rubber antiseptic handles on knives and saw. Price, $29.00. With Trephine and Elevator in addition, $33.65.

Discount 25 pr. ct. to Physicians

Our New Catalogue of 260 pages will be sent on receipt of 10 cents for postage.

HYDRONAPHTHOL

ANTISEPTIC, DISINFECTANT, GERMICIDE, AND PRESERVATIVE.

This valuable derivative of Coal Tar is no longer an experiment, but has fairly won a permanent place high up in the list of modern **Antiseptics.** After severest tests and experiments in both Hospital and Private Practice, it has been accorded a place second only to Mercuric Bicloride in point of germicidal power, and, being non-poisonous and non-corrosive, it is preferable to that well-known agent for all the purposes for which it is recommended. **HYDRONAPHTHOL** is free from the odor and escharotic properties of Carbolic Acid and other phenols, hence it is a pleasant and valuable **Internal Antiseptic.** Therefore, aside from its value as a general **Antiseptic, Disinfectant, Germicide,** and **Preservative,** it is being used with great satisfaction as an internal remedy in Cancer of the Stomach, Chronic Dyspepsia, Gastritis, Typhoid Fever, and other diseases of the alimentary canal; also in Eneuresis, Cystitis, Rheumatism, and Gout. As a local application, Dr. C. W. Allen, of N. Y., and other Dermatologists of note, have found **HYDRONAPHTHOL** superior to all other remedies in the treatment of Ulcers, Eczema, Scabies, Impetigo, Pruritus, Pityriasis Capitis, Alopecia, Favus, and other skin diseases. It also preserves anatomical and pathological specimens in their natural condition, preventing shrinkage or decay. **HYDRONAPHTHOL** is freely soluble in hot water, alcohol, benzine, and the fixed oils. We supply it in crude form or incorporated in our absorbent cotton gauze, jute, lint, or any dressing that can be rendered absorbent. We also prepare a rubber dermatological plaster containing 20 per cent. **HYDRONAPHTHOL,** as well as a toilet and a medicinal soap containing one per cent. and five per cent. respectively of the drug. A book fully descriptive of **HYDRONAPHTHOL** mailed free to Physicians.

—SPECIAL FORMULÆ TO ORDER.—

Avoid Cheap Imitations by Always Specifying "SEABURY'S" or "S. & J."

MALTINE.

MALTINE is far superior in nutritive and diastatic value to any Malt Extract manufactured in the World. There is no reconstructive that excels Maltine in Phthisis and many wasting Diseases.

MALTINE in its different forms is the only Malt Preparation we now employ, being so palatable, digestible, and easily assimilated. Of its efficiency in appropriate cases, there is no more doubt in our minds than there is of the curative power of Quinine, Cod-Liver Oil, the Bromides, and the Iodides.

It deserves to stand in the front rank of constructives; and the constructives, by their preventive, corrective, and curative power, are probably the most widely useful therapeutical agents that we possess. PROF. L. P. YANDELL.

MALTINE is a valuable food, a food of priceless value at times of emergency. In fact, in very grave gastric cases, it is a food which may often be resorted to when at one's wits'-end what to do. J. MILNER FOTHERGILL.

Out of fourteen trade samples of Malt Extract examined by Messrs. Dunstan and Dimmock, *only three* possessed the power of acting on starch. These brands were MALTINE, Corbyn, Stacey & Co.'s Extract, and Keppler's Malt Extract.
WILLIAM ROBERTS, M.D. F.R.S.

I have subjected "Maltine" and all other leading "Extracts of Malt" to an exact quantitative comparison of their diastatic activity.

The results demonstrate conclusively the far greater diastatic value of Maltine, and enable me to state, without any qualification whatever, that it far exceeds in diastatic power any of the six preparations of Malt which I have examined.
R. H. CRITTENDEN, *Professor of Physiological Chemistry in Yale College.*

At the International Health Exhibition held in London, England, the only gold medal and the highest award of merit were given to Maltine by a Jury composed of the best chemists in Europe; and recent analysis made by the most reliable authorities in Europe and America prove conclusively that Maltine—in nutritive and diastatic value—is superior to all other Malt preparations now in the market.

NOTE.—Physicians will observe that Maltine, as now prepared, is not so viscid as formerly made, being of a more fluid consistency; and, while retaining the nutritive and diastatic value which has given it precedence over all other Extracts of Malt, it is rendered entirely agreeable to the taste of the most fastidious, and is more easily administered. As now prepared, we positively guarantee that Maltine will not ferment or congeal in any climate or at any season of the year.

COMPLETE LIST OF MALTINE PREPARATIONS.

MALTINE (Plain).
MALTINE with Alteratives.
MALTINE with Cod-Liver Oil.
MALTINE with Hypophosphites.
MALTINE with Peptones.
MALTINE with Pepsin and Pancreatine.
MALTINE with Phosphates, Iron, Quinine, and Strychnia.
MALTINE Ferrated.
MALTO-YERBINE.
MALTO-VIBURNIN.
MALTINE with Cascara-Sagrada.

Physicians may obtain Maltine from all druggists in every part of the world. In cases where the physician intends to prescribe Maltine, the word "MALTINE" should be written, and not simply the words "Malt Extract" or "Extract of Malt."

Send for Pamphlet giving comparative analyses by 100 of the best Analytical Chemists in this country and Europe.

We will be happy to supply the regular practitioner with eight ounces each of any three Maltine compounds that may be selected from our list, providing he will agree to pay express charges on same.

The Maltine Manufacturing Co.,

P.O. Box 843. Philadelphia.

☞ MUST BE RETURNED IN TEN DAYS ! !

HYDROLEINE

(HYDRATED OIL)

FOR CONSUMPTION and WASTING DISEASES,

Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls equal to 120 Drops, contains:

Pure Cod Liver Oil...80 m. (drops)	Soda.....1.3 Grains.
Distilled Water.....35 "	Salicylic Acid.....1.4 "
Soluble Pancreatin.. 5 Grains.	Hyocholic Acid.....1.20 "

DOSE.—Two teaspoonfuls alone, or with twice the quantity of water to be taken thrice daily after meals.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a modicum of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in results.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph.D., F. C. S., *and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by* G. OVEREND DREWRY, M.D. ***Copies of these works sent free on application.***

SOLD AT ALL DRUG STORES, AT $1.00 PER BOTTLE.

C. N. CRITTENTON,

Sole Agent for the United States. **115 FULTON ST., NEW YORK.**

A sample of Hydroleine will be sent free upon application, to any physician (inclosing business card) in the United States.

Burlington, Vt., June 14, 1888.

Medical & Surgical Reporter,

Philadelphia, Pa.,

. . . Our opinion of the REPORTER is very favorable, and we have read with much interest its editorials of recent issues. We are glad to take space in a magazine like this, whose editor has such decided opinions and expresses them without fear; for we believe that the constituency of such a journal will always place confidence in the goods which are mentioned in its advertising pages.

Very truly yours,

Wells & Richardson Co.

COMPRESSED TABLETS.

WE ask the attention of Physicians to the annexed list of recent additions of Compressed Tablets, as we think all of them are well deserving the careful attention of practitioners. We would be pleased to send to any physician, circular matter, compiled with great care and accuracy, giving therapeutic value and results in a concise form, that we are confident will be of interest, and possibly of advantage, to medical men who have not yet had access to the foreign and home authorities from which we have culled the information we give.

Acid Boracic, ... 5 grs.
Acetanilide, ... 3 and 5 "
Antifebrin, ... 3 " 5 "
Antipyrine, ... 3, 5 " 10 "
Blaud's
Ferri. Sulph. Exsic., 2 grs., Potass. Carb., 1 4-5 grs., Sacch. Alb., 1⅔ grs.
Iodol. . . . . ½, 1, 2, 3, and 5 grs.
Manganese Binoxide, ... 1 " 2 "
Opium, Camphor and Carb. Ammon., Opium Denarcot. ½ gr., Camphor, 2 grs., Ammon. Carb., 2½ grs.
Quinia Tannate, and Chocolate 1 grain, Quiniæ Tannat. 1 gr., Ext. Cacao, 9 grs.
Quinia Tannate and Chocolate, 2½ grs., Quiniæ Tannat. 2½ grs., Ext. Cacao, 7½ grs.
Salol, ... 2½ and 5 grs.

Thalline Sulphate, ... 2, 3 " 5 "
Trinitrin (Nitro-Glycerin), 1-20, 1-25, 1-33, 1-50, 1-100, and 1-200 gr.
Terpin Hydrate, ... 2, 3 and 5 grs.

ANTISEPTIC TABLETS.

7.7 Hydrarg. Chlor. Corros., 7.3 Ammonium Chloride.

More than six months since, we sent a circular to the drug trade, stating that we had discontinued the manufacture of the Antiseptic Tablets introduced by us several years since at the suggestion of Dr. Charles Meigs Wilson, of this city. We have, however, received so many letters from physicians urging us to resume the manufacture, insisting that the Tablets prepared by us dissolved more readily and were more satisfactory than any substitute they had been able to procure, that we feel we could not ignore such persistent demands from our medical friends who have found our tablets an absolute necessity. We have therefore concluded to again prepare them, in a building entirely separate from our main establishment, with appliances and admirably devised protection by means of improved respirators, that will completely overcome any harmful effects to those engaged in their manufacture.

Druggists and physicians will be glad to learn that the Tablets as now prepared are perfectly white and free from the coloring-matter that we formerly added. This was done to lessen the danger of their being taken, or used in mistake; to guard against any such possibility, each Tablet, as now made, has the word "POISON" stamped upon it.

JOHN WYETH & BROTHER,
CHEMISTS, PHILADELPHIA

SUCCUS ALTERANS

(McDADE.)

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica Lappa Minor, Phytolacca Decandra, Smilax Sarsaparilla, and Xanthoxylum Carolinianum, as collected by Dr. Geo. W. McDade, exclusively for Eli Lilly & Co., and endorsed by Dr. J. Marion Sims.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood* and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree; is endorsed by the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides, and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS is giving satisfactory results in treatment of *Chronic Rheumatism*, and can be used with confidence.

SUCCUS ALTERANS may be given for any length of time, without injury to the patient.

SUCCUS ALTERANS is put up in pint round amber bottles, and *never in bulk.*

PHYSICIANS who have not received Dr. McDade's latest publication, the Monographia Syphilitica, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. Goodwillie, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

ELIXIR PURGANS.

Elixir Purgans (Lilly) reliably stimulates the dormant liver without undue irritation, and has gentle yet positive effect upon the alimentary tract. In Habitual Constipation, so common in Women and Children, it will be found particularly useful. Its endorsement at Bellevue and many other prominent hospitals East and West, as well as its employment in general practice by the most eminent medical men, confirms the experience of years in its use.

Each Teaspoonful Represents	
Rhamnus Purshiana, -	10 grs.
Euonymus Atropur., - -	8 grs.
Cassia Acutifolia (Purif.)	10 grs.
Iris Versicolor, - - -	4 grs.
Hyoscyamus Niger, -	2 grs.
Aromatics, etc.	

IN PRESCRIBING, PLEASE BE CAREFUL TO WRITE

ELIXIR PURGANS (LILLY),

THAT OTHER PREPARATIONS MAY NOT BE SUBSTITUTED.

HIGHLY RECOMMENDED.

We take pleasure in endorsing the Elixir Purgans (Lilly) as prepared from the above formula, for in it we find a near approach to positive *perfection* in the form of a *Liquid Cathartic*, and, from our experience with the preparation, can highly recommend it to the profession.

SCHOOL OF MEDICINE.

Eighty-second Annual Announcement, 1888–89. The next regular session will begin October 1st, 1888. A full course of didactic lectures, with ample clinical and dissecting-room facilities.

FACULTY:

GEORGE W. MILTENBERGER, M.D.,
Professor of Obstetrics.

CHRISTOPHER JOHNSON, M.D.,
Emeritus Professor of Surgery.

SAMUEL C. CHEW, M.D.,
Professor of Principles and Practice of Medicine and Hygiene.

FRANK DONALDSON, M.D.,
Clinical Professor of Diseases of the Throat and Chest.

WILLIAM T. HOWARD, M.D.,
Professor of Diseases of Women and Children and Clinical Medicine.

JULIAN J. CHISOLM, M.D.,
Professor of Eye and Ear Diseases.

FRANCIS T. MILES, M.D.,
Professor of Physiology and Clinical Professor of Diseases of Nervous System.

L. McLANE TIFFANY, M.D.,
Professor of Surgery.

J. EDWIN MICHAEL, M.D.,
Professor of Anatomy and Clinical Surgery.

I. EDMONSON ATKINSON, M.D.,
Professor of Materia Medica and Therapeutics, Clinical Medicine and Dermatology.

R. DORSEY COALE, PH.D.,
Professor of Chemistry and Toxicology.

HERBERT HARLAN, M.D.,
Demonstrator of Anatomy.

For catalogue and further information, address: **Dr. J. EDWIN MICHAEL, Dean, 937 Madison Avenue**

DENTAL DEPARTMENT.

Seventh Annual Announcement. Next regular session begins October 1st, 1888. New and excellent Infirmary and Laboratory, with abundance of clinical material.

FACULTY:

FRED. J. S. GORGAS, M.D., D.D.S.,
Professor of Principles of Dental Science, Dental Surgery, and Dental Mechanism.

JAMES H. HARRIS, M.D., D.D.S.,
Professor of Operative and Clinical Dentistry.

I. EDMONDSON ATKINSON, M.D.,
Professor of Materia Medica and Therapeutics.

FRANCIS T. MILES, M.D.,
Professor of Physiology.

L. McLANE TIFFANY, M.D.,
Clinical Professor of Oral Surgery.

J. EDWIN MICHAEL, M.D.,
Professor of Anatomy.

R. DORSEY COALE, PH.D.,
Professor of Chemistry.

JOHN C. UHLER, M.D., D.D.S.,
Demonstrator of Mechanical Dentistry.

CHAS. L. STEEL, M.D., D.D.S.,
Demonstrator of Operative Dentistry.

HERBERT HARLAN, M.D.,
Demonstrator of Anatomy.

AND EIGHT ASSISTANT DEMONSTRATORS.

For catalogue and other information, apply to **Dr. F. J. S. GORGAS, Dean, 845 Eutaw Street, Baltimore.**

Western Pennsylvania Medical College,

City of Pittsburgh.

The *Regular Session* begins on the last Tuesday of September and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation.

A three years' graded course is also provided. The *Spring Session* embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects: this session begins the Second Tuesday in April and continues ten weeks.

The laboratories are open during the collegiate year for instruction in Chemistry, Microscopy, practical demonstrations in Medical and Surgical Pathology, and lessons in Normal Histology.

Special importance attaches to the superior clinical advantages possessed by this college. For particulars, see annual announcements and catalogue, for which address the Secretary, Prof. W. J. ASDALE, 2107 Penn. Avenue, Pittsburgh.

Good Chance for a Good Man.

SALARY PAID.

Physician with a few years' experience wanted, to assist an established physician in an attractive town of 3000 inhabitants in Central Pennsylvania. A salary will be paid.

Address "CASTOR,"

COMPLIMENTARY SAMPLES.

For purifying the atmosphere of the sick-room, for deodorizing and disinfecting the discharges from he sick, for combating contagion, as an antiseptic in the lying-in chamber, and as a general disinfectant for all household purposes, PLATT'S CHLORIDES is now recognized as the standard preparation; and through the kindly interest of the medical profession, coupled with its proved merit, has become established in large demand.

During the past seven years we have personally presented the physicians of the larger cities of the United States samples for test and use, and the result has been so eminently satisfactory, and our solution has become of such sanitary assistance to the doctor, such an aid to the recovery of the patient, and so great a blessing to the attendants, we earnestly desire now to make it known to all who are still unacquainted with it, including particularly the physicians in the smaller cities, towns, and villages, and all points that we can reach by express.

To this end we will, during the next three months, forward by express, *prepaying all charges ourselves*, a full pint bottle of our PLATT'S CHLORIDES to each physician favoring us with name, P. O. address, and express office.

We feel and believe that an odorless and efficient disinfectant is of as great value and usefulness to the doctor of the small place as of the large city, and we trust that the hundreds of worthy practitioners whom we have not hitherto reached we may now hear from.

Yours truly, **HENRY B. PLATT, 36 Platt St., New York.**

N. B.—PLATT'S CHLORIDES is an odorless liquid.
Is indorsed by over 16,000 physicians.
Is used by diluting with from two to twenty parts of water, as may be indicated.
Sprinkled about, leaves no stain or smell.
Is sold by druggists in quart bottles only. Price, 50 cents.
Send for sample, and in doing so mention THE MEDICAL AND SURGICAL REPORTER.

Clinical and practical instruction in the medical and surgical specialties is afforded to physicians only, during the entire year. The College has well-fitted laboratories of pathology, miscroscopy, anatomy, surgery, and electro-therapeutics.

In addition to the clinical facilities of the dispensary, the professors utilize, for purposes of instruction, their services in the Philadelphia, Pennsylvania, Wills, Howard, Episcopal, Presbyterian, German, St. Mary's and, St. Christopher's Hospitals.

The Fee for each branch, for six consecutive weeks from date of issue, is $15.00. Any number of branches may be taken. General Ticket for the thirteen clinical courses, for six consecutive weeks, $100.00. Ticket for Summer course, from July 2d to September 15th, $60.00. One month, Summer course, $25.00. One branch, Summer course, $10.00.

L. W. STEINBACH, M.D. Secretary,

COMPRESSED TABLETS.

WE ask the attention of Physicians to the annexed list of recent additions of Compressed Tablets, as we think all of them are well deserving the careful attention of practitioners. We would be pleased to send to any physician, circular matter, compiled with great care and accuracy, giving therapeutic value and results in a concise form, that we are confident will be of interest, and possibly of advantage, to medical men who have not yet had access to the foreign and home authorities from which we have culled the information we give.

Acid Boracic, ... 5 grs.
Acetanilide, ... 3 and 5 "
Antifebrin, ... 3 " 5 "
Antipyrine, ... 3, 5 " 10 "
Blaud's
Ferri. Sulph. Exsic., 2 grs., Potass. Carb., 1 4-5 grs., Sacch. Alb., 1⅔ grs.
Iodol. . . . . ½, 1, 2, 3, and 5 grs.
Manganese Binoxide, ... 1 " 2 "
Opium, Camphor and Carb. Ammon., Opium Denarcot. ½ gr., Camphor, 2 grs., Ammon. Carb., 2½ grs.
Quinia Tannate, and Chocolate 1 grain, Quiniæ Tannat. 1 gr., Ext. Cacao, 9 grs.
Quinia Tannate and Chocolate, 2½ grs., Quiniæ Tannat. 2½ grs., Ext. Cacao, 7½ grs.
Salol, ... 2½ and 5 grs.
Sodium Succinate, ... 2 " 5 "
Thalline Sulphate, ... 2, 3 " 5 "
Trinitrin (Nitro-Glycerin), 1-20, 1-25, 1-33, 1-50, 1-100, and 1-200 gr.
Terpin Hydrate, ... 2, 3 and 5 grs.

ANTISEPTIC TABLETS.

7.7 Hydrarg. Chlor. Corros., 7.3 Ammonium Chloride.

More than six months since, we sent a circular to the drug trade, stating that we had discontinued the manufacture of the Antiseptic Tablets introduced by us several years since at the suggestion of Dr. Charles Meigs Wilson, of this city. We have, however, received so many letters from physicians urging us to resume the manufacture, insisting that the Tablets prepared by us dissolved more readily and were more satisfactory than any substitute they had been able to procure, that we feel we could not ignore such persistent demands from our medical friends who have found our tablets an absolute necessity. We have therefore concluded to again prepare them, in a building entirely separate from our main establishment, with appliances and admirably devised protection by means of improved respirators, that will completely overcome any harmful effects to those engaged in their manufacture.

Druggists and physicians will be glad to learn that the Tablets as now prepared are perfectly white and free from the coloring-matter that we formerly added. This was done to lessen the danger of their being taken, or used in mistake; to guard against any such possibility, each Tablet, as now made, has the word "POISON" stamped upon it.

JOHN WYETH & BROTHER,

CHEMISTS, PHILADELPHIA.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains fifteen grains EACH of pure Chloral Hydrat, and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam,

Dose.—One-half to one fluid-drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritabilily, etc In the restlessness and delirium of fevers, it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or Pain-relieving principal of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID-DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid-drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid-drachms (more or less, as indicated) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

SEE OTHER SIDE.

The Sub-Committee of Dietetics

ON

INFANT-FEEDING,

AT THE

American Medical Association, May 9, 1888,

Recommended a formula for an Infants' Food as a very efficient substitute for mothers' milk. This formula closely resembles that of CARNRICK'S FOOD, and no other prepared food in the market can claim a like resemblance.

THE FORMULAS.

℞

Formula Recommended by the Sub-Committee on Infant-Feeding, as above stated.

Desiccated partly peptonized milk in the form of a milk-food, containing partly converted starch (soluble starch or dextrin) and a small quantity of lactose, is a convenient and (when well made) a very efficient substitute for mothers' milk.

Formula for Carnrick's Food.

Evaporated or desiccated milk, partly peptonized and thoroughly sterilized by heat, ... 45 parts.

Dextrin, Soluble Starch and Milk Sugar, ... 55 parts.

This forms a fine dry powder, which will keep in any climate, and only requires the addition of water to render it a suitable nutrient for infants, or adults whose digestive powers have become impaired.

Carnrick's Food contains about five per cent. of fat. This is the largest amount possible to combine in a stable preparation presented in a powdered form. In cases where a larger amount of fat is desirable, a small quantity of cream may be added.

We do not claim this food to be "a PERFECT substitute for human milk.'
But we do claim that

CARNRICK'S FOOD APPROACHES NEARER TO HUMAN MILK IN CONSTITUENTS AND DIGESTIBILITY THAN ANY OTHER PREPARED FOOD THAT HAS EVER BEEN PRODUCED,

and that it is the only infants' food that will, without the addition of cows' milk, thoroughly nourish a child from its birth.

We believe that CARNRICK'S FOOD solves the problem of a reliable substitute for human milk. The Casein of cows' milk, by partial predigestion with freshly made Pancreatine, is rendered as easily digestible by the infant as human milk, and, by thorough sterilization with heat, made aseptic, thus avoiding the objection to the use of milk foods in Cholera Infantum.

Full information regarding the process of manufacture will be cheerfully furnished and samples sent free to those who wish to test CARNRICK'S FOOD.

REED & CARNRICK, New York

COMPLIMENTARY SAMPLES.

For purifying the atmosphere of the sick-room, for deodorizing and disinfecting the discharges from he sick, for combating contagion, as an antiseptic in the lying-in chamber, and as a general disinfectant for all household purposes, PLATT'S CHLORIDES is now recognized as the standard preparation; and through the kindly interest of the medical profession, coupled with its proved merit, has become established in large demand.

DEMONSTRATORS.

A Corps of Eleven Demonstrators and their Assistants.

The Sixty-fourth Annual Winter Session will begin October 1st, 1888, and will continue until April 1st, 1889. Preliminary lectures will be held from September 17th. Two courses of lectures are necessary for a degree. A three years' graded course is also provided. Practical Laboratory instruction is given in all departments without extra charge. General and Special Clinics are given daily at the College Hospital. *With the winter session of 1890 a three years' obligatory curriculum will begin.* For full particulars, send for the Annual Announcement, to

J. W. HOLLAND, M.D., Dean.

SPECIAL ATTENTION OF THE MEDICAL PROFESSION

SUNDERLAND TELEPHONES

PRIVATE LINES—NO ELECTRICITY

Particularly adapted for **Hospitals, Institutions, Hotels, Residences, Etc.** Direct lines of less than five miles. No legal complication. Free from Lightning, with Perfect Enunciation. Cheap and Absolutely Reliable. We submit it to the test of actual use, and a call at our office for purposes of examination is invited at any time.

WHEELER & EVANS, SOLE AGENTS,

No. 416 Walnut St., Philadelphia

COLDEN'S LIQUID BEEF TONIC.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in the Treatment of all Cases of Debility.

☞ ESTABLISHED 15 YEARS. ☞ ENDORSED BY SCORES OF PHYSICIANS. ☞ BEWARE OF IMITATIONS.

☞ ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS.

COLDEN'S LIQUID BEEF TONIC consists of the Extract of Beef (by Baron Liebig's process), spirit rendered non-injurious to the most delicate stomach by extraction of Fusel Oil, Soluble Citrate of Iron, Cinchona, Gentian, and simple aromatics. An official analysis of this preparation by the eminent chemist, ARTHUR HILL HASSALL, M.D., F.R.S., and an endorsement of by Sir ERASMUS WILSON, F.R.S., is printed on the label of each bottle.

In the treatment of all cases of Debility, Convalescence from severe illness, Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Lack of Nerve Tone, and of the Alcohol and Opium Habits, and all maladies requiring a Tonic Nutrient, it is superior to all other preparations.

It acts directly on the sentient gastric nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement, an appetite.—By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of SOLUBLE CITRATE OF IRON, and which is designated on the label WITH IRON, "No. 1;" while the same preparation, WITHOUT IRON, is designated on the label as "No. 2."

☞ *I will, upon application, send a sample bottle of* COLDEN'S LIQUID BEEF TONIC *to any physician in regular standing. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation physicians should be particular to mention* "COLDEN'S," *viz.*, "EXT. CARNIS FL. COMP. (COLDEN)." *It is put up in pint bottles, and* CAN BE HAD OF WHOLESALE AND RETAIL DRUGGISTS GENERALLY THROUGHOUT THE UNITED STATES.

C. N. CRITTENTON, Sole Agent, 115 Fulton Street, New York.

GLENN'S SULPHUR SOAP.

All physicians know the great value of the local use of Sulphur in the TREATMENT OF DISEASES OF THE SKIN. GLENN'S SULPHUR SOAP is the ORIGINAL and BEST combination of its kind, and the one now generally used. For sale by all Druggists at 25 cents a cake, or three cakes for 60 cents. Beware of counterfeits.

CONSTANTINE'S PINE TAR SOAP.

BY FAR THE BEST TAR SOAP MADE. Has been on trial among physicians for very many years as a toilet soap and healing agent, and its superior virtues have been unanimously conceded in ALL CASES WHERE THE USE OF TAR IS INDICATED.

Unsolicited expressions of its excellence have been received from the Medical Faculty generally. None genuine unless stamped "A. A. Constantine's Persian Healing Pine Tar Soap." For sale by all Druggists.

Wholesale Depot, C. N. CRITTENTON, 115 Fulton Street, New York.

Please mention this Journal. ☞ Samples of above Soaps SENT FREE on application to any physician enclosing card.

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterated.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: McARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

Mention this Journal. McARTHUR HYPOPHOSPHITE CO., BOSTON, Mass

UNIVERSITY OF MARYLAND
SCHOOL OF MEDICINE.

Eighty-second Annual Announcement, 1888–89. The next regular session will begin October 1st, 1888. A full course of didactic lectures, with ample clinical and dissecting-room facilities.

FACULTY:

GEORGE W. MILTENBERGER, M.D.,
Professor of Obstetrics.

CHRISTOPHER JOHNSON, M.D.,
Emeritus Professor of Surgery.

SAMUEL C. CHEW, M.D.,
Professor of Principles and Practice of Medicine and Hygiene.

FRANK DONALDSON, M.D.,
Clinical Professor of Diseases of the Throat and Chest.

WILLIAM T. HOWARD, M.D.,
Professor of Diseases of Women and Children and Clinical Medicine.

JULIAN J. CHISOLM, M.D.,
Professor of Eye and Ear Diseases.

FRANCIS T. MILES, M.D.,
Professor of Physiology and Clinical Professor of Diseases of Nervous System.

L. McLANE TIFFANY, M.D.,
Professor of Surgery.

J. EDWIN MICHAEL, M.D.,
Professor of Anatomy and Clinical Surgery.

I. EDMONSON ATKINSON, M.D.,
Professor of Materia Medica and Therapeutics, Clinical Medicine and Dermatology.

R. DORSEY COALE, PH.D.,
Professor of Chemistry and Toxicology.

HERBERT HARLAN, M.D.,
Demonstrator of Anatomy.

For catalogue and further information, address: **Dr. J. EDWIN MICHAEL, Dean, 937 Madison Avenue**

DENTAL DEPARTMENT.

Seventh Annual Announcement. Next regular session begins October 1st, 1888. New and excellent Infirmary and Laboratory, with abundance of clinical material.

FACULTY:

FRED. J. S. GORGAS, M.D., D.D.S.,
Professor of Principles of Dental Science, Dental Surgery, and Dental Mechanism.

JAMES H. HARRIS, M.D., D.D.S.,
Professor of Operative and Clinical Dentistry.

I. EDMONDSON ATKINSON, M.D.,
Professor of Materia Medica and Therapeutics.

FRANCIS T. MILES, M.D.,
Professor of Physiology.

L. McLANE TIFFANY, M.D.,
Clinical Professor of Oral Surgery.

J. EDWIN MICHAEL, M.D.,
Professor of Anatomy.

R. DORSEY COALE, PH.D.,
Professor of Chemistry.

JOHN C. UHLER, M.D., D.D.S.,
Demonstrator of Mechanical Dentistry.

CHAS. L. STEEL, M.D., D.D.S.,
Demonstrator of Operative Dentistry.

HERBERT HARLAN, M.D.,
Demonstrator of Anatomy.

AND EIGHT ASSISTANT DEMONSTRATORS.

For catalogue and other information, apply to **Dr. F. J. S. GORGAS, Dean, 845 Eutaw Street, Baltimore.**

Western Pennsylvania Medical College,

City of Pittsburgh.

The *Regular Session* begins on the last Tuesday of September and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation.

A three years' graded course is also provided. The *Spring Session* embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects: this session begins the Second Tuesday in April and continues ten weeks.

The laboratories are open during the collegiate year for instruction in Chemistry, Microscopy, practical demonstrations in Medical and Surgical Pathology, and lessons in Normal Histology.

Special importance attaches to the superior clinical advantages possessed by this college. For particulars, see annual announcements and catalogue, for which address the Secretary, Prof. W. J. ASDALE. 2107 Penn. Avenue, Pittsburgh.

COMPLIMENTARY SAMPLES.

For purifying the atmosphere of the sick-room, for deodorizing and disinfecting the discharges from he sick, for combating contagion, as an antiseptic in the lying-in chamber, and as a general disinfectant for all household purposes, PLATT'S CHLORIDES is now recognized as the standard preparation; and through the kindly interest of the medical profession, coupled with its proved merit, has become established in large demand.

During the past seven years we have personally presented the physicians of the larger cities of the United States samples for test and use, and the result has been so eminently satisfactory, and our solution has become of such sanitary assistance to the doctor, such an aid to the recovery of the patient, and so great a blessing to the attendants, we earnestly desire now to make it known to all who are still unacquainted with it, including particularly the physicians in the smaller cities, towns, and villages, and all points that we can reach by express.

To this end we will, during the next three months, forward by express, *prepaying all charges ourselves*, a full pint bottle of our PLATT'S CHLORIDES to each physician favoring us with name, P. O. address, and express office.

We feel and believe that an odorless and efficient disinfectant is of as great value and usefulness to the doctor of the small place as of the large city, and we trust that the hundreds of worthy practitioners whom we have not hitherto reached we may now hear from.

Yours truly, **HENRY B. PLATT, 36 Platt St., New York.**

N. B.—PLATT'S CHLORIDES is an odorless liquid.
Is indorsed by over 16,000 physicians.
Is used by diluting with from two to twenty parts of water, as may be indicated.
Sprinkled about, leaves no stain or smell.
Is sold by druggists in quart bottles only. Price, 50 cents.
Send for sample, and in doing so mention THE MEDICAL AND SURGICAL REPORTER.

Clinical and practical instruction in the medical and surgical specialties is afforded to physicians only, during the entire year. The College has well-fitted laboratories of pathology, miscroscopy, anatomy, surgery, and electro-therapeutics.

In addition to the clinical facilities of the dispensary, the professors utilize, for purposes of instruction, their services in the Philadelphia, Pennsylvania, Wills, Howard, Episcopal, Presbyterian, German, St. Mary's and, St. Christopher's Hospitals.

The Fee for each branch, for six consecutive weeks from date of issue, is $15.00. Any number of branches may be taken. General Ticket for the thirteen clinical courses, for six consecutive weeks, $100.00. Ticket for Summer course, from July 2d to September 15th, $60.00. One month, Summer course, $25.00. One branch, Summer course, $10.00.

Food in Cholera Infantum
and the
Summer Diarrhœa of Infants.

The food of an infant, ill with cholera infantum or summer diarrhœa, is a matter of the highest importance, and it is now well known that until milk in every form has been strictly excluded from the diet, no relief can be expected. Experience has proved that MELLIN'S FOOD, dissolved in water only, is the best diet in these diseases; given cold and in small amounts frequently repeated, the stomach will retain it without trouble. The great difficulty in the treatment of these complaints is thus immediately overcome, for the child will be nourished and its strength maintained. When convalescence has been established, milk, at first in small amount, can be added to the Mellin's Food, and gradually increased as the child is found to bear it.

A sample of MELLIN'S FOOD, *sufficient for trial, will be sent to any physician upon application.*

DOLIBER, GOODALE & CO., Boston, Mass.

THE DIPLOMA OF HONOR.

NESTLÉ'S FOOD IS

The only infant's food that has ever received 12 Diplomas of Honor.

The only *sound, safe, nutritious* food that is prepared with water alone.

The best safeguard against Summer Complaint and Cholera Infantum.

"The best of all foods for infants."

Send for sample to THOS. LEEMING & CO., New York.

IN TREATMENT OF CHOLERA INFANTUM, NESTLÉ'S FOOD IS AN INDISPENSABLE DIET.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength and efficacy than heretofore

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"The most suitable aperient for prolonged use."—Prof. SEEGEN.

"After twenty years' use, I appreciate it as highly as ever."—Prof. VIRCHOW.

HYDRONAPHTHOL

ANTISEPTIC, DISINFECTANT, GERMICIDE, AND PRESERVATIVE

This valuable derivative of Coal Tar is no longer an experiment, but has fairly won a permanent place high up in the list of modern **Antiseptics.** After severest tests and experiments in both Hospital and Private Practice, it has been accorded a place second only to Mercuric Bicloride in point of germicidal power, and, being non-poisonous and non-corrosive, it is preferable to that well-known agent for all the purposes for which it is recommended. **HYDRONAPHTHOL** is free from the odor and escharotic properties of Carbolic Acid and other phenols, hence it is a pleasant and valuable **Internal Antiseptic.** Therefore, aside from its value as a general **Antiseptic, Disinfectant, Germicide,** and **Preservative,** it is being used with great satisfaction as an internal remedy in Cancer of the Stomach, Chronic Dyspepsia, Gastritis, Typhoid Fever, and other diseases of the alimentary canal; also in Eneuresis, Cystitis, Rheumatism, and Gout. As a local application, Dr. C. W. Allen, of N. Y., and other Dermatologists of note, have found **HYDRONAPHTHOL** superior to all other remedies in the treatment of Ulcers, Eczema, Scabies, Impetigo, Pruritus, Pityriasis Capitis, Alopecia, Favus, and other skin diseases. It also preserves anatomical and pathological specimens in their natural condition, preventing shrinkage or decay. **HYDRONAPHTHOL** is freely soluble in hot water, alcohol, benzine, and the fixed oils. We supply it in crude form or incorporated in our absorbent cotton gauze, jute, lint, or any dressing that can be rendered absorbent. We also prepare a rubber dermatological plaster containing 20 per cent. **HYDRONAPHTHOL,** as well as a toilet and a medicinal soap containing one per cent. and five per cent. respectively of the drug. A book fully descriptive of **HYDRONAPHTHOL** mailed free to Physicians.

MALTINE.

MALTINE is far superior in nutritive and diastatic value to any Malt Extract manufactured in the World. There is no reconstructive that excels Maltine in Phthisis and many wasting Diseases.

MALTINE in its different forms is the only Malt Preparation we now employ, being so palatable, digestible, and easily assimilated. Of its efficiency in appropriate cases, there is no more doubt in our minds than there is of the curative power of Quinine, Cod-Liver Oil, the Bromides, and the Iodides.

It deserves to stand in the front rank of constructives; and the constructives, by their preventive, corrective, and curative power, are probably the most widely useful therapeutical agents that we possess. PROF. L. P. YANDELL.

MALTINE is a valuable food, a food of priceless value at times of emergency. In fact, in very grave gastric cases, it is a food which may often be resorted to when at one's wits'-end what to do. J. MILNER FOTHERGILL.

Out of fourteen trade samples of Malt Extract examined by Messrs. Dunstan and Dimmock, *only three* possessed the power of acting on starch. These brands were MALTINE, Corbyn, Stacey & Co.'s Extract, and Keppler's Malt Extract.
WILLIAM ROBERTS, M.D. F.R.S.

I have subjected "Maltine" and all other leading "Extracts of Malt" to an exact quantitative comparison of their diastatic activity.

The results demonstrate conclusively the far greater diastatic value of Maltine, and enable me to state, without any qualification whatever, that it far exceeds in diastatic power any of the six preparations of Malt which I have examined.
R. H. CRITTENDEN, *Professor of Physiological Chemistry in Yale College.*

At the International Health Exhibition held in London, England, the only gold medal and the highest award of merit were given to Maltine by a Jury composed of the best chemists in Europe; and recent analysis made by the most reliable authorities in Europe and America prove conclusively that Maltine—in nutritive and diastatic value—is superior to all other Malt preparations now in the market

---

NOTE.—Physicians will observe that Maltine, as now prepared, is not so viscid as formerly made, being of a more fluid consistency; and, while retaining the nutritive and diastatic value which has given it precedence over all other Extracts of Malt, it is rendered entirely agreeable to the taste of the most fastidious, and is more easily administered. As now prepared, we positively guarantee that Maltine will not ferment or congeal in any climate or at any season of the year.

COMPLETE LIST OF MALTINE PREPARATIONS.

MALTINE (Plain).	**MALTINE** with Peptones.	**MALTINE** Ferrated.
MALTINE with Alteratives.	**MALTINE** with Pepsin and Pancreatine.	**MALTO-YERBINE.**
MALTINE with Cod-Liver Oil.	**MALTINE** with Phosphates, Iron, Quinine, and Strychnia.	**MALTO-VIBURNIN.**
MALTINE with Hypophosphites.		**MALTINE** with Cascara-Sagrada.

Physicians may obtain Maltine from all druggists in every part of the world. In cases where the physician intends to prescribe Maltine, the word "MALTINE" should be written, and not simply the words "Malt Extract" or "Extract of Malt."

Send for Pamphlet giving comparative analyses by 100 of the best Analytical Chemists in this country and Europe.

We will be happy to supply the regular practitioner with eight ounces each of any three Maltine compounds that may be selected from our list, providing he will agree to pay express charges on same.

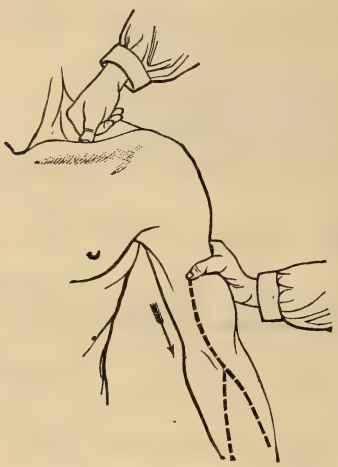
THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES M.D.



"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

Sent on receipt of 75 Cents.

ADDRESS: Drs. RANDOLPH & DULLES,
P.O. Box 843. PHILADELPHIA, PA.

Food in Cholera Infantum
and the
Summer Diarrhœa of Infants.

The food of an infant, ill with cholera infantum or summer diarrhœa, is a matter of the highest importance, and it is now well known that until milk in every form has been strictly excluded from the diet, no relief can be expected. Experience has proved that MELLIN'S FOOD, dissolved in water only, is the best diet in these diseases; given cold and in small amounts frequently repeated, the stomach will retain it without trouble. The great difficulty in the treatment of these complaints is thus immediately overcome, for the child will be nourished and its strength maintained. When convalescence has been established, milk, at first in small amount, can be added to the Mellin's Food, and gradually increased as the child is found to bear it.

A sample of MELLIN'S FOOD, *sufficient for trial, will be sent to any physician upon application.*

whose subscriptions expired July 1, 1888.

SEE OTHER SIDE.

The Sub-Committee of Dietetics

ON

INFANT-FEEDING,

AT THE

American Medical Association, May 9, 1888,

Recommended a formula for an Infants' Food as a very efficient substitute for mothers' milk. This formula closely resembles that of CARNRICK'S FOOD, and no other prepared food in the market can claim a like resemblance.

THE FORMULAS.

Formula Recommended by the Sub-Committee on Infant-Feeding, as above stated.

Desiccated partly peptonized milk in the form of a milk-food, containing partly converted starch (soluble starch or dextrin) and a small quantity of lactose, is a convenient and (when well made) a very efficient substitute for mothers' milk.

Formula for Carnrick's Food.

Evaporated or desiccated milk, partly peptonized and thoroughly sterilized by heat, ... 45 parts.

Dextrin, Soluble Starch and Milk Sugar, ... 55 parts.

This forms a fine dry powder, which will keep in any climate, and only requires the addition of water to render it a suitable nutrient for infants, or adults whose digestive powers have become impaired.

Carnrick's Food contains about five per cent. of fat. This is the largest amount possible to combine in a stable preparation presented in a powdered form. In cases where a larger amount of fat is desirable, a small quantity of cream may be added.

We do not claim this food to be "a PERFECT substitute for human milk.'
But we do claim that

CARNRICK'S FOOD APPROACHES NEARER TO HUMAN MILK IN CONSTITUENTS AND DIGESTIBILITY THAN ANY OTHER PREPARED FOOD THAT HAS EVER BEEN PRODUCED,

and that it is the only infants' food that will, without the addition of cows' milk, thoroughly nourish a child from its birth.

We believe that CARNRICK'S FOOD solves the problem of a reliable substitute for human milk. The Casein of cows' milk, by partial predigestion with freshly made Pancreatine, is rendered as easily digestible by the infant as human milk, and, by thorough sterilization with heat, made aseptic, thus avoiding the objection to the use of milk foods in Cholera Infantum.

Full information regarding the process of manufacture will be cheerfully furnished and samples sent free to those who wish to test CARNRICK'S FOOD.

REED & CARNRICK, New York

COMPLIMENTARY SAMPLES.

For purifying the atmosphere of the sick-room, for deodorizing and disinfecting the discharges from he sick, for combating contagion, as an antiseptic in the lying-in chamber, and as a general disinfectant for all household purposes, PLATT'S CHLORIDES is now recognized as the standard preparation; and through the kindly interest of the medical profession, coupled with its proved merit, has become established in large demand.

During the past seven years we have personally presented the physicians of the larger cities of the United States samples for test and use, and the result has been so eminently satisfactory, and our solution has become of such sanitary assistance to the doctor, such an aid to the recovery of the patient, and so great a blessing to the attendants, we earnestly desire now to make it known to all who are still unacquainted with it, including particularly the physicians in the smaller cities, towns, and villages, and all points that we can reach by express.

To this end we will, during the next three months, forward by express, *prepaying all charges ourselves*, a full pint bottle of our PLATT'S CHLORIDES to each physician favoring us with name, P. O. address, and express office.

We feel and believe that an odorless and efficient disinfectant is of as great value and usefulness to the doctor of the small place as of the large city, and we trust that the hundreds of worthy practitioners whom we have not hitherto reached we may now hear from.

Yours truly, **HENRY B. PLATT, 36 Platt St., New York.**

N. B.—PLATT'S CHLORIDES is an odorless liquid.
Is indorsed by over 16,000 physicians.
Is used by diluting with from two to twenty parts of water, as may be indicated.
Sprinkled about, leaves no stain or smell.
Is sold by druggists in quart bottles only. Price, 50 cents.
Send for sample, and in doing so mention THE MEDICAL AND SURGICAL REPORTER.

DOCTORS SHOULD PRESCRIBE

Lactated Food when their little patients are poorly nourished. Its base is sugar of milk, it contains no cane sugar or starch, is easily assimilated, and possesses the highest value in nutrients.

WHEELER & EVANS, SOLE AGENTS,
No. 416 Walnut St., Philadelphia

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterated.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: McARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

Mention this Journal. McARTHUR HYPOPHOSPHITE CO., BOSTON, Mass

HYDROLEINE

(HYDRATED OIL)

FOR CONSUMPTION and WASTING DISEASES, Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls equal to 120 Drops, contains:

Pure Cod Liver Oil...80 m. (drops)	Soda.....1.3 Grains.
Distilled Water.....35 "	Salicylic Acid.....1.4 "
Soluble Pancreatin.. 5 Grains.	Hyocholic Acid.....1.20 "

DOSE.—Two teaspoonfuls alone, or with twice the quantity of water to be taken thrice daily after meals.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a modicum of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in results.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph.D., F. C. S., *and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by* G. OVEREND DREWRY, M.D. *Copies of these works sent free on application.*

SOLD AT ALL DRUG STORES, AT $1.00 PER BOTTLE.

C. N. CRITTENTON,

Sole Agent for the United States. 115 FULTON ST., NEW YORK.

A sample of Hydroleine will be sent free upon application, to any physician (inclosing business card) in the United States.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every Fluid drachm contains fifteen grains EACH of pure Chloral Hydrat, and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam.

Dose.—One-half to one fluid-drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritabilily, etc In the restlessness and delirium of fevers, it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or Pain-relieving principal of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—

Same as Opium or Morphia.

Dose.—(ONE FLUID-DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—

Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid-drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid-drachms (more or less, as indicated) three times a day, before meals.

Indications.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

SOMETHING NEW

ELIXIR OF COCA AND CALISAYA

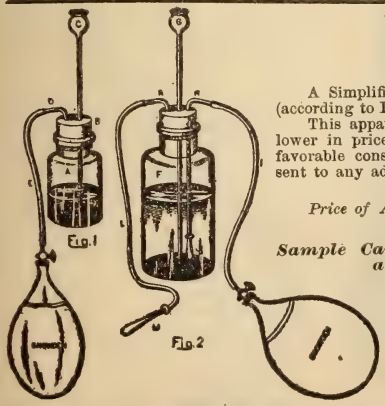
which represents the virtues of these drugs in a *most active and palatable form.* The process of manufacture is ENTIRELY ORIGINAL—that of direct fermentation from the bark and leaf—and we claim that better results can be obtained from this preparation than from any other combination of *Coca and Calisaya* now made.

MADE ONLY BY

STRYKER & OGDEN, CHEMISTS

Walnut and Thirteenth Sts., Phila.

N. B.—Always on hand fresh VACCINE VIRUS *from National Vaccine Establishment, Washington, D. C.*



Treatment of Consumption

A Simplified Apparatus for the preparation and introduction of gases into the bowel (according to Dr. Bergeon's method) by Dr. H. N. Bryan, of Philadelphia.

This apparatus has advantages which others do not possess, and, being considerably lower in price than any devised for a similar purpose, it should commend itself to the favorable consideration of the medical profession. An illustrated descriptive circular sent to any address, on application.

Price of Apparatus, complete, in a neat portable Telescopic Case with Handle, ***$6.00***

Sample Card of the Iron-Dyed Silk (14 sizes) will be sent to any address, on application. Price, per Reel, 10 Cents.

(*State*) .....

THERE ARE STILL SOME WHO HAVE NOT PAID UP!

Reminder to Subscribers

whose subscriptions expired July 1, 1888.

SEE OTHER SIDE.

☞ *AN UNSOLICITED TESTIMONIAL.*

Burlington, Vt., June 14, 1888.

Medical & Surgical Reporter,

Philadelphia, Pa.,

. . . Our opinion of the REPORTER is very favorable, and we have read with much interest its editorials of recent issues. We are glad to take space in a magazine like this, whose editor has such decided opinions and expresses them without fear; for we believe that the constituency of such a journal will always place confidence in the goods which are mentioned in its advertising pages.

Very truly yours,

Wells & Richardson Co.

THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES M.D.

"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

Sent on receipt of 75 Cents.

ADDRESS: **DRS. RANDOLPH & DULLES,**

P.O. Box 843. PHILADELPHIA, PA.

FELLOWS'
HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The essential elements** to the Animal Organization—Potash and Lime.

The **Oxydizing Agents**—Iron and Manganese;

The **Tonics**—Quinine and Strychnine,

And the **Vitalizing Constituent**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars sent to Physicians on Application.

FOR SALE BY ALL DRUGGISTS.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength and efficacy than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"The most suitable aperient for prolonged use."—Prof. SEEGEN.

'After twenty years' use, I appreciate it as highly as ever."—Prof. VIRCHOW.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

YOU WILL FIND **BROMO-CAFFEINE** OF GREATEST SERVICE IN

OF ALL TYPES **NERVOUS HEADACHES** OF ALL TYPES

Headaches from Loss of Sleep, Physical Fatigue, Excessive Study, Mental Anxiety, Neurasthenia, Dysmenorrhœa, Pregnancy, or other Ovarian Irritation. Relieves Insomnia, and is very useful in Asthma, Whooping Cough and Nervous Cough. Prevents Tinnitis Aurium during the administration of Quinine. Cures Sea Sickness, Quiets the Restlessness of Alcoholism, Morphia Craving, &c. Relieves Anxiety and Promotes Sleep.

MALTINE.

MALTINE is far superior in nutritive and diastatic value to any Malt Extract manufactured in the World. There is no reconstructive that excels Maltine in Phthisis and many wasting Diseases.

MALTINE in its different forms is the only Malt Preparation we now employ, being so palatable, digestible, and easily assimilated. Of its efficiency in appropriate cases, there is no more doubt in our minds than there is of the curative power of Quinine, Cod-Liver Oil, the Bromides, and the Iodides.

It deserves to stand in the front rank of constructives; and the constructives, by their preventive, corrective, and curative power, are probably the most widely useful therapeutical agents that we possess. PROF. L. P. YANDELL.

MALTINE is a valuable food, a food of priceless value at times of emergency. In fact, in very grave gastric cases, it is a food which may often be resorted to when at one's wits'-end what to do. J. MILNER FOTHERGILL.

Out of fourteen trade samples of Malt Extract examined by Messrs. Dunstan and Dimmock, *only three* possessed the power of acting on starch. These brands were MALTINE, Corbyn, Stacey & Co.'s Extract, and Keppler's Malt Extract.
WILLIAM ROBERTS, M.D. F.R.S.

I have subjected "Maltine" and all other leading "Extracts of Malt" to an exact quantitative comparison of their diastatic activity.

The results demonstrate conclusively the far greater diastatic value of Maltine, and enable me to state, without any qualification whatever, that it far exceeds in diastatic power any of the six preparations of Malt which I have examined.
R. H. CRITTENDEN, *Professor of Physiological Chemistry in Yale College.*

At the International Health Exhibition held in London, England, the only gold medal and the highest award of merit were given to Maltine by a Jury composed of the best chemists in Europe; and recent analysis made by the most reliable authorities in Europe and America prove conclusively that Maltine—in nutritive and diastatic value—is superior to all other Malt preparations now in the market.

NOTE.—Physicians will observe that Maltine, as now prepared, is not so viscid as formerly made, being of a more fluid consistency; and, while retaining the nutritive and diastatic value which has given it precedence over all other Extracts of Malt, it is rendered entirely agreeable to the taste of the most fastidious, and is more easily administered. As now prepared, we positively guarantee that Maltine will not ferment or congeal in any climate or at any season of the year.

COMPLETE LIST OF MALTINE PREPARATIONS.

MALTINE (Plain).
MALTINE with Alteratives.
MALTINE with Cod-Liver Oil.
MALTINE with Hypophosphites.
MALTINE with Peptones.
MALTINE with Pepsin and Pancreatine.
MALTINE with Phosphates, Iron, Quinine, and Strychnia.
MALTINE Ferrated.
MALTO-YERBINE.
MALTO-VIBURNIN.
MALTINE with Cascara-Sagrada.

Physicians may obtain Maltine from all druggists in every part of the world. In cases where the physician intends to prescribe Maltine, the word "MALTINE" should be written, and not simply the words "Malt Extract" or "Extract of Malt."

Send for Pamphlet giving comparative analyses by 100 of the best Analytical Chemists in this country and Europe.

We will be happy to supply the regular practitioner with eight ounces each of any three Maltine compounds that may be selected from our list, providing he will agree to pay express charges on same.

ADDRESS: Drs. RANDOLPH & DULLES,
P.O. Box 843. PHILADELPHIA, PA.

Food in Cholera Infantum
and the
Summer Diarrhœa of Infants.

The food of an infant, ill with cholera infantum or summer diarrhœa, is a matter of the highest importance, and it is now well known that until milk in every form has been strictly excluded from the diet, no relief can be expected. Experience has proved that MELLIN'S FOOD, dissolved in water only, is the best diet in these diseases; given cold and in small amounts frequently repeated, the stomach will retain it without trouble. The great difficulty in the treatment of these complaints is thus immediately overcome, for the child will be nourished and its strength maintained. When convalescence has been established, milk, at first in small amount, can be added to the Mellin's Food, and gradually increased as the child is found to bear it.

A sample of MELLIN'S FOOD, *sufficient for trial, will be sent to any physician upon application.*

DOLIBER, GOODALE & CO., Boston, Mass.

SUCCUS ALTERANS

(McDADE.)

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica Lappa Minor, Phytolacca Decandra, Smilax Sarsaparilla, and Xanthoxylum Carolinianum, as collected by Dr. Geo. W. McDade, exclusively for Eli Lilly & Co., and endorsed by Dr. J. Marion Sims.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood* and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree; is endorsed by the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides, and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS is giving satisfactory results in treatment of *Chronic Rheumatism*, and can be used with confidence.

SUCCUS ALTERANS may be given for any length of time, without injury to the patient.

SUCCUS ALTERANS is put up in pint round amber bottles, and *never in bulk.*

PHYSICIANS who have not received Dr. McDade's latest publication, the Monographia Syphilitica, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. Goodwillie, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

ELIXIR PURGANS.

Elixir Purgans (Lilly) reliably stimulates the dormant liver without undue irritation, and has gentle yet positive effect upon the alimentary tract. In Habitual Constipation, so common in Women and Children, it will be found particularly useful. Its endorsement at Bellevue and many other prominent hospitals East and West, as well as its employment in general practice by the most eminent medical men, confirms the experience of years in its use.

Each Teaspoonful Represents	
Rhamnus Purshiana,	**10 grs.**
Euonymus Atropur.,	**8 grs.**
Cassia Acutifolia (Purif.)	**10 grs.**
Iris Versicolor,	**4 grs.**

COMPRESSED TABLETS.

WE ask the attention of Physicians to the annexed list of recent additions of Compressed Tablets, as we think all of them are well deserving the careful attention of practitioners. We would be pleased to send to any physician, circular matter, compiled with great care and accuracy, giving therapeutic value and results in a concise form, that we are confident will be of interest, and possibly of advantage, to medical men who have not yet had access to the foreign and home authorities from which we have culled the information we give.

Acid Boracic, ... 5 grs.
Acetanilide, ... 3 and 5 "
Antifebrin, ... 3 " 5 "
Antipyrine, ... 3, 5 " 10 "
Blaud's
Ferri. Sulph. Exsic., 2 grs., Potass. Carb., 1 4-5 grs., Sacch. Alb., 1⅔ grs.
Iodol. . . . . ½, 1, 2, 3, and 5 grs.
Manganese Binoxide, ... 1 " 2 "
Opium, Camphor and Carb. Ammon., Opium Denarcot. ½ gr., Camphor, 2 grs., Ammon. Carb., 2½ grs.
Quinia Tannate, and Chocolate 1 grain, Quiniæ Tannat. 1 gr., Ext. Cacao, 9 grs.
Quinia Tannate and Chocolate, 2½ grs., Quiniæ Tannat. 2½ grs., Ext. Cacao. 7½ grs.
Salol, ... 2½ and 5 grs.
Sodium Succinate, ... 2 " 5 "
Thalline Sulphate, ... 2, 3 " 5 "
Trinitrin (Nitro-Glycerin), 1-20, 1-25, 1-33, 1-50, 1-100, and 1-200 gr.
Terpin Hydrate, ... 2, 3 and 5 grs.

ANTISEPTIC TABLETS.

7.7 Hydrarg. Chlor. Corros., 7.3 Ammonium Chloride.

More than six months since, we sent a circular to the drug trade, stating that we had discontinued the manufacture of the Antiseptic Tablets introduced by us several years since at the suggestion of Dr. Charles Meigs Wilson, of this city. We have, however, received so many letters from physicians urging us to resume the manufacture, insisting that the Tablets prepared by us dissolved more readily and were more satisfactory than any substitute they had been able to procure, that we feel we could not ignore such persistent demands from our medical friends who have found our tablets an absolute necessity. We have therefore concluded to again prepare them, in a building entirely separate from our main establishment, with appliances and admirably devised protection by means of improved respirators, that will completely overcome any harmful effects to those engaged in their manufacture.

Druggists and physicians will be glad to learn that the Tablets as now prepared are perfectly white and free from the coloring-matter that we formerly added. This was done to lessen the danger of their being taken, or used in mistake; to guard against any such possibility, each Tablet, as now made, has the word "POISON" stamped upon it.

JOHN WYETH & BROTHER,

CHEMISTS, PHILADELPHIA.

UNIVERSITY OF MARYLAND
SCHOOL OF MEDICINE.

Eighty-second Annual Announcement, 1888–89. The next regular session will begin October 1st, 1888. A full course of didactic lectures, with ample clinical and dissecting-room facilities.

FACULTY:

GEORGE W. MILTENBERGER, M.D.,
Professor of Obstetrics.

CHRISTOPHER JOHNSON, M.D.,
Emeritus Professor of Surgery.

SAMUEL C. CHEW, M.D.,
Professor of Principles and Practice of Medicine and Hygiene.

FRANK DONALDSON, M.D.,
Clinical Professor of Diseases of the Throat and Chest.

WILLIAM T. HOWARD, M.D.,
Professor of Diseases of Women and Children and Clinical Medicine.

JULIAN J. CHISOLM, M.D.,
Professor of Eye and Ear Diseases.

FRANCIS T. MILES, M.D.,
Professor of Physiology and Clinical Professor of Diseases of Nervous System.

L. McLANE TIFFANY, M.D.,
Professor of Surgery.

J. EDWIN MICHAEL, M.D.,
Professor of Anatomy and Clinical Surgery.

I. EDMONSON ATKINSON, M.D.,
Professor of Materia Medica and Therapeutics, Clinical Medicine and Dermatology.

R. DORSEY COALE, PH.D.,
Professor of Chemistry and Toxicology.

HERBERT HARLAN, M.D.,
Demonstrator of Anatomy.

For catalogue and further information, address: **Dr. J. EDWIN MICHAEL, Dean, 937 Madison Avenue**

DENTAL DEPARTMENT.

Seventh Annual Announcement. Next regular session begins October 1st, 1888. New and excellent Infirmary and Laboratory, with abundance of clinical material.

FACULTY:

FRED. J. S. GORGAS, M.D., D.D.S.,
Professor of Principles of Dental Science, Dental Surgery, and Dental Mechanism.

JAMES H. HARRIS, M.D., D.D.S.,
Professor of Operative and Clinical Dentistry.

I. EDMONDSON ATKINSON, M.D.,
Professor of Materia Medica and Therapeutics.

FRANCIS T. MILES, M.D.,
Professor of Physiology.

L. McLANE TIFFANY, M.D.,
Clinical Professor of Oral Surgery.

J. EDWIN MICHAEL, M.D.,
Professor of Anatomy.

R. DORSEY COALE, PH.D.,
Professor of Chemistry.

JOHN C. UHLER, M.D., D.D.S.,
Demonstrator of Mechanical Dentistry.

CHAS. L. STEEL, M.D., D.D.S.,
Demonstrator of Operative Dentistry.

HERBERT HARLAN, M.D.,
Demonstrator of Anatomy.

AND EIGHT ASSISTANT DEMONSTRATORS.

For catalogue and other information, apply to **Dr. F. J. S. GORGAS, Dean, 845 Eutaw Street, Baltimore.**

Western Pennsylvania Medical College,

City of Pittsburgh.

The *Regular Session* begins on the last Tuesday of September and continues six months. During this session, in addition to four Didactic Lectures, two or three hours are daily allotted to Clinical Instruction. Attendance upon two regular courses of lectures is requisite for graduation.

A three years' graded course is also provided. The *Spring Session* embraces recitations, clinical lectures and exercises, and didactic lectures on special subjects: this session begins the Second Tuesday in April and continues ten weeks.

The laboratories are open during the collegiate year for instruction in Chemistry, Microscopy, practical demonstrations in Medical and Surgical Pathology, and lessons in Normal Histology.

Special importance attaches to the superior clinical advantages possessed by this college. For particulars, see annual announcements and catalogue, for which address the Secretary, Prof. W. J. ASDALE, 2107 Penn. Avenue, Pittsburgh.

COMPLIMENTARY SAMPLES.

For purifying the atmosphere of the sick-room, for deodorizing and disinfecting the discharges from the sick, for combating contagion, as an antiseptic in the lying-in chamber, and as a general disinfectant for all household purposes, PLATT'S CHLORIDES is now recognized as the standard preparation; and through the kindly interest of the medical profession, coupled with its proved merit, has become established in large demand.

During the past seven years we have personally presented the physicians of the larger cities of the United States samples for test and use, and the result has been so eminently satisfactory, and our solution has become of such sanitary assistance to the doctor, such an aid to the recovery of the patient, and so great a blessing to the attendants, we earnestly desire now to make it known to all who are still unacquainted with it, including particularly the physicians in the smaller cities, towns, and villages, and all points that we can reach by express.

To this end we will, during the next three months, forward by express, *prepaying all charges ourselves*, a full pint bottle of our PLATT'S CHLORIDES to each physician favoring us with name, P. O. address, and express office.

We feel and believe that an odorless and efficient disinfectant is of as great value and usefulness to the doctor of the small place as of the large city, and we trust that the hundreds of worthy practitioners whom we have not hitherto reached we may now hear from.

Yours truly, **HENRY B. PLATT, 36 Platt St., New York.**

N. B.—PLATT'S CHLORIDES is an odorless liquid.
Is indorsed by over 16,000 physicians.
Is used by diluting with from two to twenty parts of water, as may be indicated.
Sprinkled about, leaves no stain or smell.
Is sold by druggists in quart bottles only. Price, 50 cents.
Send for sample, and in doing so mention THE MEDICAL AND SURGICAL REPORTER.

Clinical and practical instruction in the medical and surgical specialties is afforded to physicians only, during the entire year. The College has well-fitted laboratories of pathology, miscroscopy, anatomy, surgery, and electro-therapeutics.

In addition to the clinical facilities of the dispensary, the professors utilize, for purposes of instruction, their services in the Philadelphia, Pennsylvania, Wills, Howard, Episcopal, Presbyterian, German, St. Mary's and, St. Christopher's Hospitals.

The Fee for each branch, for six consecutive weeks from date of issue, is $15.00. Any number of branches may be taken. General Ticket for the thirteen clinical courses, for six consecutive weeks, $100.00. Ticket for Summer course, from July 2d to September 15th, $60.00. One month, Summer course, $25.00. One branch, Summer course, $10.00.

L. W. STEINBACH, M.D. Secretary,
At the College Building, N. W. Cor. Broad and Lombard Streets, Philadelphia.

SVAPNIA

OR

PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

JOHN FARR, Manufacturing Chemist, New York.

PRESIDENT CLEVELAND'S PRIZE

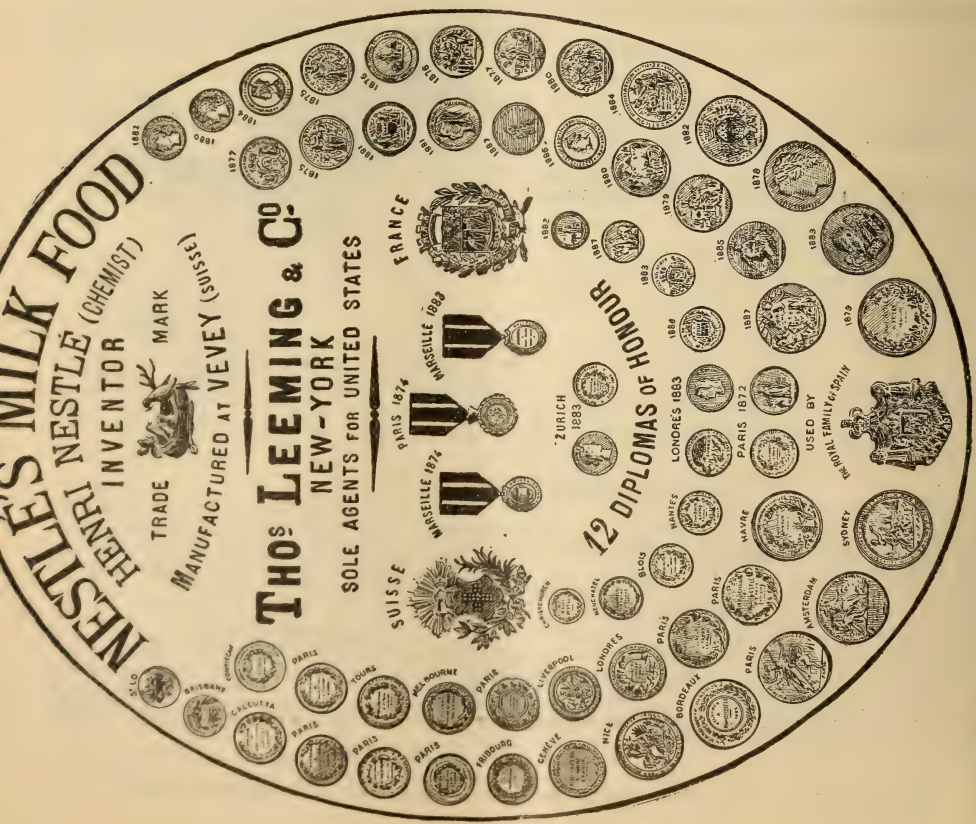
for the three best babies at the Aurora County Fair, in 1887, was given to these triplets, Mollie, Ida, and Ray, children of Mrs. A. K. Dart, Hamburgh, N. Y. She writes: "Last August the little ones became very sick, and as I could get no other food that would agree with them, I commenced the use of Lactated Food. It helped them immediately, and they were soon as well as ever, and I consider it very largely due to the Food that they are now so well.

LACTATED FOOD

SUGAR OF MILK THE BASIS. NO CANE SUGAR.
FREE FROM STARCH. HIGHEST VALUE IN NUTRIENTS.
EASILY ASSIMILATED.

A regular size package of Lactated Food will be sent, charges paid, to any Physician who is not yet acquainted with its merits. Correspondence solicited.

WELLS, RICHARDSON & CO., Burlington, Vt. and Montreal, P. Q.



The only infant's food that has ever received 12 Diplomas of Honor.
The only sound, safe, nutritious food that is prepared with water alone.
The best safeguard against Summer Complaint and Cholera Infantum.

Send for sample to Thos. Leeming & Co., New York.

SPECIFY (BATTLE) WHEN PRESCRIBING OUR PREPARATIONS.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains fifteen grains EACH of pure Chloral Hydrat, and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam,

Dose.—One-half to one fluid-drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritabilily, etc In the restlessness and delirium of fevers, it is absolutely invaluable

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or Pain-relieving principal of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID-DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid-drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid-drachms (more or less, as indicated) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES, M.D.

"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

Sent on receipt of 75 Cents.

Every candidate for admission who does not present a degree in Arts or Sciences, a certificate of graduation in a high or normal school, or a certificate of having passed a satisfactory examination of a duly organized county medical society must undergo an examination in English, Latin, Physics, and Mathematics. The examination may be conducted by one of the censors or at the College. Instruction is given by lectures, clinical teaching, and practical demonstrations. In the subjects of Anatomy, Pharmacy, Chemistry, Histology and Pathological Anatomy, the usual methods of instruction are largely supplemented by laboratory work. The year begins September 10th, and is divided into a Preliminary Session of three weeks, a Regular Session of six months, and a Spring Session of ten weeks. Students are divided into three classes, according to their time of study and proficiency. Students who have begun their professional studies elsewhere may be admitted to advanced standing upon satisfactory examination in the branches already pursued by the class to which they seek admission. Although the degree of DOCTOR OF MEDICINE is conferred at the end of three years' study, a fourth year is provided which is voluntary, (but) attendance upon which will afford the student increased facilities for practical study in clinical medicine, surgery, and the various specialties.

ORDER OF STUDIES:

FIRST YEAR—Anatomy (bones and ligaments), Physiology, General Chemistry, Materia Medica and Pharmacy, General Pathology and Hygiene. SECOND YEAR—Anatomy (muscles, vessels, and viscera), Medical Chemistry, Physiology, Physical Diagnosis, Therapeutics, Clinical Medicine, and Clinical Surgery. THIRD YEAR—Anatomy (nervous system), Therapeutics, Obstetrics, Theory and Practice of Medicine, Clinical Medicine, Surgical Pathology, Surgery, Clinical Surgery, Opthalmology, Dermatology, Syphilis, Diseases of Women, Diseases of Children, Electro-Therapeutics, and Forensic Medicine FOURTH YEAR—Opthalmology, Otology, Dermatology, Syphilis, Laryngology, Mental and Nervous Diseases, Diseases of Women, Diseases of Children, Clinical Medicine, Clinical and Operative Surgery, Orthopædic Surgery, Oral Surgery, Forensic Medicine, Genito-Urinary Diseases, Diseases of the Rectum, Diseases of the Female Bladder, Bacteriology, Clinical Microscopy, Preparation of Food for Infants and Invalids, and Anæsthetics.

REQUIREMENTS FOR A DEGREE: Every candidate must be twenty-one years of age, must have attended three or four full terms, one winter session of which was spent at this school, have passed a written examination upon the prescribed studies of the course.

FEES: Matriculation, $5.00; for the first and second years, each, $75; for the third year (graduation included), $100; for the fourth year, to graduates of this school, free; to graduates of other schools, upon the payment of a matriculation-fee. Only graduates of a three years' school will be permitted to join the graduating-class for the degree of this school, upon the payment of a fee of $40. The above fees are conditional upon their being paid before November 1st.

FELLOWS'
HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The essential elements** to the Animal Organization—Potash and Lime.

The **Oxydizing Agents**—Iron and Manganese;

The **Tonics**—Quinine and Strychnine,

And the **Vitalizing Constituent**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

A Strange Thing!

There are about 250 medical journals published in this country which are claimed by their publishers to be the best & cheapest! This can hardly be so; but such is the claim. Some measure their merits with a foot-rule, and some pretend to weigh them.

Now let every reader take his own rule & scale, and try this: =

A. The Reporter (weekly) about 2000 pages
B. " Compendium (quarterly) " 600 "

The Reporter full of hot sparks from the anvil of medical experience =

The Compendium full of well hammered articles: Both for $6.00 a year!

Too few of the subscribers to the Reporter take the Compendium. More ought to!!

You will get a Specimen copy if you ask for it — perhaps if you don't!

COMPLIMENTARY SAMPLES.

For purifying the atmosphere of the sick-room, for deodorizing and disinfecting the discharges from the sick, for combating contagion, as an antiseptic in the lying-in chamber, and as a general disinfectant for all household purposes, PLATT'S CHLORIDES is now recognized as the standard preparation; and through the kindly interest of the medical profession, coupled with its proved merit, has become established in large demand.

During the past seven years we have personally presented the physicians of the larger cities of the United States samples for test and use, and the result has been so eminently satisfactory, and our solution has become of such sanitary assistance to the doctor, such an aid to the recovery of the patient, and so great a blessing to the attendants, we earnestly desire now to make it known to all who are still unacquainted with it, including particularly the physicians in the smaller cities, towns, and villages, and all points that we can reach by express.

To this end we will, during the next three months, forward by express, *prepaying all charges ourselves*, a full pint bottle of our PLATT'S CHLORIDES to each physician favoring us with name, P. O. address, and express office.

We feel and believe that an odorless and efficient disinfectant is of as great value and usefulness to the doctor of the small place as of the large city, and we trust that the hundreds of worthy practitioners whom we have not hitherto reached we may now hear from.

Yours truly, **HENRY B. PLATT, 36 Platt St., New York.**

N. B.—PLATT'S CHLORIDES is an odorless liquid.
Is indorsed by over 16,000 physicians.
Is used by diluting with from two to twenty parts of water, as may be indicated.
Sprinkled about, leaves no stain or smell.
Is sold by druggists in quart bottles only. Price, 50 cents.
Send for sample and in doing so mention THE MEDICAL AND SURGICAL REPORTER.

PRESIDENT CLEVELAND'S PRIZE

for the three best babies at the Aurora County Fair, in 1887, was given to these triplets, Mollie, Ida, and Ray, children of Mrs. A. K. Dart, Hamburgh, N. Y. She writes: "Last August the little ones became very sick, and as I could get no other food that would agree with them, I commenced the use of Lactated Food. It helped them immediately, and they were soon as well as ever, and I consider it very largely due to the Food that they are now so well.

LACTATED FOOD

SUGAR OF MILK THE BASIS. NO CANE SUGAR.
FREE FROM STARCH. HIGHEST VALUE IN NUTRIENTS.
EASILY ASSIMILATED.

A regular size package of Lactated Food will be sent, charges paid, to any Physician who is not yet acquainted with its merits. Correspondence solicited.

WHEELER & EVANS, SOLE AGENTS,

No. 416 Walnut St., Philadelphia

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterated.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: McARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

Mention this Journal. McARTHUR HYPOPHOSPHITE CO., BOSTON, Mass

COLDEN'S LIQUID BEEF TONIC.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in the Treatment of all Cases of Debility.

☞ ESTABLISHED 15 YEARS. ☞ ENDORSED BY SCORES OF PHYSICIANS. ☞ BEWARE OF IMITATIONS.

☞ ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS.

COLDEN'S LIQUID BEEF TONIC consists of the Extract of Beef (by Baron Liebig's process), spirit rendered non-injurious to the most delicate stomach by extraction of Fusel Oil, Soluble Citrate of Iron, Cinchona, Gentian, and simple aromatics. An official analysis of this preparation by the eminent chemist, ARTHUR HILL HASSALL, M.D., F.R.S., and an endorsement of by Sir ERASMUS WILSON, F.R.S., is printed on the label of each bottle.

In the treatment of all cases of Debility, Convalescence from severe illness, Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Lack of Nerve Tone, and of the Alcohol and Opium Habits, and all maladies requiring a Tonic Nutrient, it is superior to all other preparations.

It acts directly on the sentient gastric nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement, an appetite.—By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of SOLUBLE CITRATE OF IRON, and which is designated on the label WITH IRON, "No. 1;" while the same preparation, WITHOUT IRON, is designated on the label as "No. 2."

☞ ***I will, upon application, send a sample bottle of*** **COLDEN'S LIQUID BEEF TONIC** ***to any physician in regular standing. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation physicians should be particular to mention*** **"COLDEN'S,"** ***viz.,*** **"EXT. CARNIS FL. COMP. (COLDEN)."** ***It is put up in pint bottles, and*** **CAN BE HAD OF WHOLESALE AND RETAIL DRUGGISTS GENERALLY THROUGHOUT THE UNITED STATES.**

THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES, M.D.

"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

Sent on receipt of 75 Cents.

Clinical and practical instruction in the medical and surgical specialties is afforded to physicians only, during the entire year. The College has well-fitted laboratories of pathology, miscroscopy, anatomy, surgery, and electro-therapeutics.

In addition to the clinical facilities of the dispensary, the professors utilize, for purposes of instruction, their services in the Philadelphia, Pennsylvania, Wills, Howard, Episcopal, Presbyterian German, St. Mary's and, St. Christopher's Hospitals.

The Fee for each branch, for six consecutive weeks from date of issue, is $15.00. Any number of branches may be taken. General Ticket for the thirteen clinical courses, for six consecutive weeks, $100.00. Ticket for Summer course, from July 2d to September 15th, $60.00. One month, Summer course, $25.00. One branch, Summer course, $10.00.

L. W. STEINBACH, M.D. Secretary,
At the College Building, N. W. Cor. Broad and Lombard Streets, Philadelphia.

COMPRESSED TABLETS.

WE ask the attention of Physicians to the annexed list of recent additions of Compressed Tablets, as we think all of them are well deserving the careful attention of practitioners. We would be pleased to send to any physician, circular matter, compiled with great care and accuracy, giving therapeutic value and results in a concise form, that we are confident will be of interest, and possibly of advantage, to medical men who have not yet had access to the foreign and home authorities from which we have culled the information we give.

Acid Boracic, ... 5 grs.
Acetanilide, ... 3 and 5 "
Antifebrin, ... 3 " 5 "
Antipyrine, ... 3, 5 " 10 "
Blaud's
Ferri. Sulph. Exsic., 2 grs., Potass. Carb., 1 4-5 grs., Sacch. Alb., 1⅔ grs.
Iodol. . . . . ½, 1, 2, 3, and 5 grs.
Manganese Binoxide, ... 1 " 2 "
Opium, Camphor and Carb. Ammon., Opium Denarcot. ½ gr., Camphor, 2 grs., Ammon. Carb., 2½ grs.
Quinia Tannate, and Chocolate 1 grain, Quiniæ Tannat. 1 gr., Ext. Cacao, 9 grs.
Quinia Tannate and Chocolate, 2½ grs., Quiniæ Tannat. 2½ grs., Ext. Cacao 7½ grs.
Salol, ... 2½ and 5 grs.
Sodium Succinate, ... 2 " 5 "
Thalline Sulphate, ... 2, 3 " 5 "
Trinitrin (Nitro-Glycerin), 1-20, 1-25, 1-33, 1-50, 1-100, and 1-200 gr.
Terpin Hydrate, ... 2, 3 and 5 grs.

ANTISEPTIC TABLETS.

7.7 Hydrarg. Chlor. Corros., 7.3 Ammonium Chloride.

More than six months since, we sent a circular to the drug trade, stating that we had discontinued the manufacture of the Antiseptic Tablets introduced by us several years since at the suggestion of Dr. Charles Meigs Wilson, of this city. We have, however, received so many letters from physicians urging us to resume the manufacture, insisting that the Tablets prepared by us dissolved more readily and were more satisfactory than any substitute they had been able to procure, that we feel we could not ignore such persistent demands from our medical friends who have found our tablets an absolute necessity. We have therefore concluded to again prepare them, in a building entirely separate from our main establishment, with appliances and admirably devised protection by means of improved respirators, that will completely overcome any harmful effects to those engaged in their manufacture.

Druggists and physicians will be glad to learn that the Tablets as now prepared are perfectly white and free from the coloring-matter that we formerly added. This was done to lessen the danger of their being taken, or used in mistake; to guard against any such possibility, each Tablet, as now made, has the word "POISON" stamped upon it.

JOHN WYETH & BROTHER,

CHEMISTS, PHILADELPHIA.

UNIVERSITY OF MARYLAND
SCHOOL OF MEDICINE.

Eighty-second Annual Announcement, 1888–89. The next regular session will begin October 1st, 1888. A full course of didactic lectures, with ample clinical and dissecting-room facilities.

FACULTY:

GEORGE W. MILTENBERGER, M.D.,
Professor of Obstetrics.

CHRISTOPHER JOHNSON, M.D.,
Emeritus Professor of Surgery.

SAMUEL C. CHEW, M.D.,
Professor of Principles and Practice of Medicine and Hygiene.

FRANK DONALDSON, M.D.,
Clinical Professor of Diseases of the Throat and Chest.

WILLIAM T. HOWARD, M.D.,
Professor of Diseases of Women and Children and Clinical Medicine.

JULIAN J. CHISOLM, M.D.,
Professor of Eye and Ear Diseases.

Demonstrator of Operative Dentistry.

HERBERT HARLAN, M.D.,
Demonstrator of Anatomy.

AND EIGHT ASSISTANT DEMONSTRATORS.

For catalogue and other information, apply to **Dr. F. J. S. GORGAS, Dean, 845 Eutaw Street, Baltimore.**

$3000 WILL BUY A PRACTICE

WORTH FROM $2000 TO $2500 A YEAR.

In a farming, lumbering, mining, and coke region; with property consisting of ¾ acre of ground, pleasantly located; with fruit and shrubbery; well drained, good water; house of ten rooms; ice, wood, and coal houses under connecting roof; carriage-house, stable for two horses and cow; all built 1884, at a cost of $4000. Satisfactory reasons given for selling.
JAMES A. THOMPSON, M.D., Snow Shoe, Centre Co., Pa.

DOCTOR, DO YOU WANT TO BUY OR SELL A PRACTICE OR DRUG-STORE?

Partners, Assistants, and Substitutes furnished. Some fine locations for sale. Send full particulars with stamp. Address DR. E. G. JONES,
372 Union Ave., Paterson, N. J.

SUNNYSIDE,

A PRIVATE MEDICAL HOME FOR NERVOUS INVALIDS. | 128 Park Place, nr. Prospect Park, BROOKLYN, N. Y.

This well-known Home, established in 1876, with handsomely furnished apartments, receives a limited number of either sex of MENTAL AND NERVOUS DISEASES, DIPSOMANIA, AND OPIUM HABIT, and offers to such patients all the attention, comforts, and attractiveness of a home, together with medical treatment. Application may be made either by mail or personally. OPIUM HABIT AND DIPSOMANIA receive special attention, and patients enjoy the strictest privacy. TRAINED NURSES.
EDWARD C. MANN, M.D., *Medical Supt.*
Consultation hours until 12 daily.

AN UNUSUAL OPPORTUNITY.

A physician who desires to move for good reason will sell a practice from which he collects from $1000 to $1200 a year; a good frame house and barn, ⅝ acre of land, fine well, and fruit trees, for **$3000.** The place is a thriving village, in one of the best agricultural regions of Pennsylvania.
Address, "POLLUX,"
Office Medical and Surgical Reporter, Philadelphia.

REPORTER VACCINE VIRUS.

(HUMANIZED.)

For some time we have ceased to advertise VACCINE VIRUS, for a very good reason, viz: **We could not get what we found reliable.** Now we can, and offer our subscribers Crusts from healthy infants at

ONE DOLLAR, OR TWO DOLLARS

according to size. They are from the best source we know of, and we can recommend them.

But dealing in VACCINE VIRUS is an accommodation to our subscribers, and not a source of material profit to us; so we must have **Money sent with Order.** If crusts don't take, we will get another.

COMPLIMENTARY SAMPLES.

For purifying the atmosphere of the sick-room, for deodorizing and disinfecting the discharges from the sick, for combating contagion, as an antiseptic in the lying-in chamber, and as a general disinfectant for all household purposes, PLATT'S CHLORIDES is now recognized as the standard preparation; and through the kindly interest of the medical profession, coupled with its proved merit, has become established in large demand.

During the past seven years we have personally presented the physicians of the larger cities of the United States samples for test and use, and the result has been so eminently satisfactory, and our solution has become of such sanitary assistance to the doctor, such an aid to the recovery of the patient, and so great a blessing to the attendants, we earnestly desire now to make it known to all who are still unacquainted with it, including particularly the physicians in the smaller cities, towns, and villages, and all points that we can reach by express.

To this end we will, during the next three months, forward by express, *prepaying all charges ourselves*, a full pint bottle of our PLATT'S CHLORIDES to each physician favoring us with name, P. O. address, and express office.

We feel and believe that an odorless and efficient disinfectant is of as great value and usefulness to the doctor of the small place as of the large city, and we trust that the hundreds of worthy practitioners whom we have not hitherto reached we may now hear from.

Yours truly, **HENRY B. PLATT, 36 Platt St., New York.**

N. B.—PLATT'S CHLORIDES is an odorless liquid.
Is indorsed by over 16,000 physicians.
Is used by diluting with from two to twenty parts of water, as may be indicated.
Sprinkled about, leaves no stain or smell.
Is sold by druggists in quart bottles only. Price, 50 cents.
Send for sample, and in doing so mention THE MEDICAL AND SURGICAL REPORTER.

PRESIDENT CLEVELAND'S PRIZE

for the three best babies at the Aurora County Fair, in 1887, was given to these triplets, Mollie, Ida, and Ray, children of Mrs. A. K. Dart, Hamburgh, N. Y. She writes: "Last August the little ones became very sick, and as I could get no other food that would agree with them, I commenced the use of Lactated Food. It helped them immediately, and they were soon as well as ever, and I consider it very largely due to the Food that they are now so well.

LACTATED FOOD

SUGAR OF MILK THE BASIS. NO CANE SUGAR.
FREE FROM STARCH. HIGHEST VALUE IN NUTRIENTS.
EASILY ASSIMILATED.

A regular size package of Lactated Food will be sent, charges paid, to any Physician who is not yet acquainted with its merits. Correspondence solicited.

EDITION OF 1888.

THERAPEUTICS:

ITS PRINCIPLES AND PRACTICE.

By H. C. WOOD, M.D., LL.D.

8vo. CLOTH, $6.00. SHEEP, $6.50

In announcing the *Seventh Edition* of Dr. Wood's well-known classic, the publishers beg leave to call the attention of the profession to the fact that it has been so thoroughly revised and so carefully rewritten, so altered in form as well as in matter, that it is a new book with little apparent resemblance to its former self.

The general scope of the work and the classification of remedies have been changed. At present the book is composed of two parts. Part I. treats of remedies which are not drugs, and considers, besides various miscellaneous remedial measures, massage, metallo-therapy, the feeding of the sick, and the dietetic and general treatment of underlying bodily constitutional states or diatheses, such as exhaustion, obesity, and lithiasis. The second part of the work is devoted to the study of drugs, and has been entirely rearranged in accordance with a new classification. All the new drugs, such as hydrastine, strophanthus, sparteine, adonidine, iodol, ichthyol, paraldehyde, urethan, hypnone, amylene hydrate, methylal, oil of sandalwood, kawa, extract of malt, papain, antifebrin, salol, bethol, thallin, kairin, acetphenetedin, lanolin, saccharin, sulphuretted hydrogen, etc., have been carefully considered, while many articles upon older drugs, such as cocaine, antifebrin, and caffeine, have been completely rewritten: further, the discussions of even the longest and best-known members of the Materia Medica list have been carefully gone over, and made clearer and more practical. Notwithstanding the constant effort at condensation, nearly two hundred pages of new matter have been added. By the use of italics, or, in some articles, by giving a summary in a distinct paragraph, the attempt has been made to point out what is essential in our knowledge of the physiological action of drugs.

In their turn, by the use of the latest improvements, the publishers have made the book not only more comely than before, but also less fatiguing to the eye during reading; and they feel that they can confidently claim that the work not only represents all that is best and newest on the subject of which it treats, but also that as a scientific epitome of therapeutics and as a practical guide to the treatment of disease it is not surpassed by any treatise extant, and that it still remains, as stated by the *London Practitioner*, "the only complete treatise on the physiological action of drugs in the English language."

If not obtainable at your Bookseller's, send direct to the Publishers, who will forward the book, postpaid, on receipt of the price.

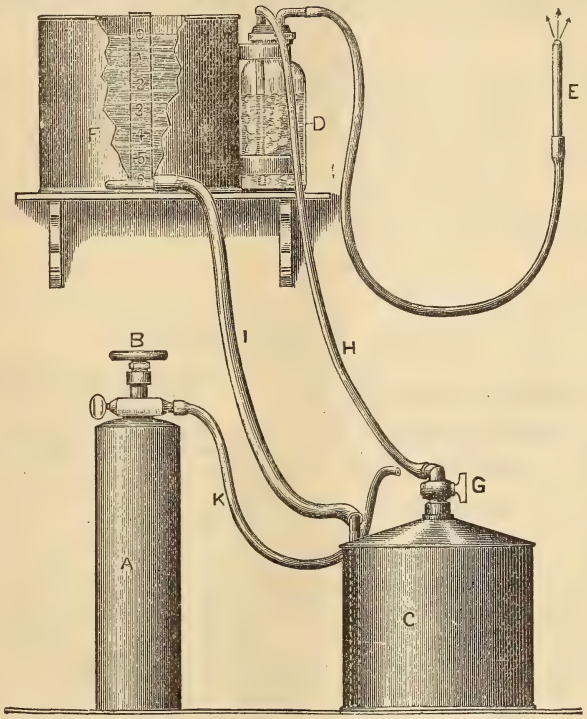
J. B. LIPPINCOTT COMPANY, Publishers,

715 and 717 Market St., Philadelphia, Pa.

PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

The Sub-Committee of Dietetics

ON

INFANT-FEEDING,

AT THE

American Medical Association, May 9, 1888,

Recommended a formula for an Infants' Food as a very efficient substitute for mothers' milk. This formula closely resembles that of CARNRICK'S FOOD, and no other prepared food in the market can claim a like resemblance.

THE FORMULAS.

Formula Recommended by the Sub-Committee on Infant-Feeding, as above stated.

Desiccated partly peptonized milk in the form of a milk-food, containing partly converted starch (soluble starch or dextrin) and a small quantity of lactose, is a convenient and (when well made) a very efficient substitute for mothers' milk.

Formula for Carnrick's Food.

Evaporated or desiccated milk, partly peptonized and thoroughly sterilized by heat, ... 45 parts.
Dextrin, Soluble Starch and Milk Sugar, ... 55 parts.

This forms a fine dry powder, which will keep in any climate, and only requires the addition of water to render it a suitable nutrient for infants, or adults whose digestive powers have become impaired.

Carnrick's Food contains about five per cent. of fat. This is the largest amount possible to combine in a stable preparation presented in a powdered form. In cases where a larger amount of fat is desirable, a small quantity of cream may be added.

We do not claim this food to be "a PERFECT substitute for human milk."
But we do claim that

CARNRICK'S FOOD APPROACHES NEARER TO HUMAN MILK IN CONSTITUENTS AND DIGESTIBILITY THAN ANY OTHER PREPARED FOOD THAT HAS EVER BEEN PRODUCED,

and that it is the only infants' food that will, without the addition of cows' milk, thoroughly nourish a child from its birth.

We believe that CARNRICK'S FOOD solves the problem of a reliable substitute for human milk. The Casein of cows' milk, by partial predigestion with freshly made Pancreatine, is rendered as easily digestible by the infant as human milk, and, by thorough sterilization with heat, made aseptic, thus avoiding the objection to the use of milk foods in Cholera Infantum.

Full information regarding the process of manufacture will be cheerfully furnished and samples sent free to those who wish to test CARNRICK'S FOOD.

REED & CARNRICK, New York

A Strange Thing!

COMPLIMENTARY SAMPLES.

For purifying the atmosphere of the sick-room, for deodorizing and disinfecting the discharges from the sick, for combating contagion, as an antiseptic in the lying-in chamber, and as a general disinfectant for all household purposes, PLATT'S CHLORIDES is now recognized as the standard preparation; and through the kindly interest of the medical profession, coupled with its proved merit, has become established in large demand.

During the past seven years we have personally presented the physicians of the larger cities of the United States samples for test and use, and the result has been so eminently satisfactory, and our solution has become of such sanitary assistance to the doctor, such an aid to the recovery of the patient, and so great a blessing to the attendants, we earnestly desire now to make it known to all who are still unacquainted with it, including particularly the physicians in the smaller cities, towns, and villages, and all points that we can reach by express.

To this end we will, during the next three months, forward by express, *prepaying all charges ourselves*, a full pint bottle of our PLATT'S CHLORIDES to each physician favoring us with name, P. O. address, and express office.

We feel and believe that an odorless and efficient disinfectant is of as great value and usefulness to the doctor of the small place as of the large city, and we trust that the hundreds of worthy practitioners whom we have not hitherto reached we may now hear from.

Yours truly, **HENRY B. PLATT, 36 Platt St., New York.**

N. B.—PLATT'S CHLORIDES is an odorless liquid.
Is indorsed by over 16,000 physicians.
Is used by diluting with from two to twenty parts of water, as may be indicated.
Sprinkled about, leaves no stain or smell.
Is sold by druggists in quart bottles only. Price, 50 cents.
Send for sample and in doing so mention THE MEDICAL AND SURGICAL REPORTER.

PRESIDENT CLEVELAND'S PRIZE

for the three best babies at the Aurora County Fair, in 1887, was given to these triplets, Mollie, Ida, and Ray, children of Mrs. A. K. Dart, Hamburgh, N. Y. She writes: "Last August the little ones became very sick, and as I could get no other food that would agree with them, I commenced the use of Lactated Food It helped them immediately, and they were soon as well as ever, and I consider it very largely due to the Food that they are now so well.

LACTATED FOOD

SUGAR OF MILK THE BASIS. NO CANE SUGAR.
FREE FROM STARCH. HIGHEST VALUE IN NUTRIENTS.
EASILY ASSIMILATED.

A regular size package of Lactated Food will be sent, charges paid, to any Physician who is not yet acquainted with its merits. Correspondence solicited.

WHEELER & EVANS, SOLE AGENTS,

No. 416 Walnut St., Philadelphia

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterat d.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: McARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains fifteen grains EACH of pure Chloral Hydrat, and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam,

Dose.—One-half to one fluid-drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritabilily, etc In the restlessness and delirium of fevers, it is absolutely invaluable

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or Pain-relieving principal of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID-DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid-drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid-drachms (more or less, as indicated) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

HYDROLEINE

(HYDRATED OIL)

FOR CONSUMPTION and WASTING DISEASES,

Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls equal to 120 Drops, contains:

Pure Cod Liver Oil...80 m. (drops)	Soda.....1.3 Grains.
Distilled Water.....35 "	Salicylic Acid.....1.4 "
Soluble Pancreatin.. 5 Grains.	Hyocholic Acid.....1.20 "

DOSE.—Two teaspoonfuls alone, or with twice the quantity of water to be taken thrice daily after meals.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a modicum of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in results.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph.D., F. C. S., *and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by* G. OVEREND DREWRY, M.D. ***Copies of these works sent free on application.***

SOLD AT ALL DRUG STORES, AT $1.00 PER BOTTLE.

C. N. CRITTENTON,

Sole Agent for the United States. **115 FULTON ST., NEW YORK.**

A sample of Hydroleine will be sent free upon application, to any physician (inclosing business card) in the United States.

CAPITAL,

$1,000,000.

THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES, M.D.

"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

Sent on receipt of 75 Cents.

PRICE - $4.00.

Address, Drs. RANDOLPH & DULLES.

P. O. Box 843, Philadelphia.

ARTIFICIAL LEGS and ARMS

WITH RUBBER HANDS AND FEET.

MARKS' PATENTS.

Over 8,000 in actual use throughout the civilized world. The use of rubber hands and feet on artificial limbs simplifies the construction so that limbs can be worn by the crippled for many years without requiring repairs. Men engaged in every conceivable occupation operate on rubber feet or use their rubber hands to great advantage.

MR. A. A. MARKS: MAMARONECK, N. Y., Dec. 21, 1887.

DEAR SIR: Over twelve years ago I met with the misfortune of having both my legs crushed by the railroad cars, which necessitated amputation below the knees. By the advice of my surgeons I placed myself under your care for restoration. Your reputation as the one most competent in the land had so impressed me that I felt I was soon to realize the most that skill and ingenuity could devise,

I well remember how proud I was when your genius placed me in a position in which I could indulge in youthful sports, how I availed myself of every advantage, playing ball, boating, fishing, and hunting in summer, and skating in winter.

I became quite an expert on the skates and relished the applause my antics on the ice would excite. My obligations to the pair you made for me placed me in a position to feel a sense of duty to put them to the severest test and boast of my accomplishments.

For this reason I have indulged in many sports which really belong to the sound and rugged. My latest prank is that of riding a bicycle. I found the task considerable at first, but being determined, I succeeded after repeated attempts, to ride tolerably well.

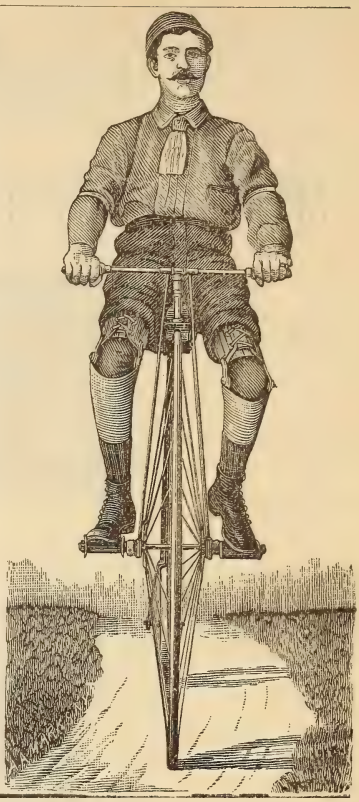
I shall only be too happy to commend your rubber feet, and will do all I can to encourage their sale. JAMES McDONALD.

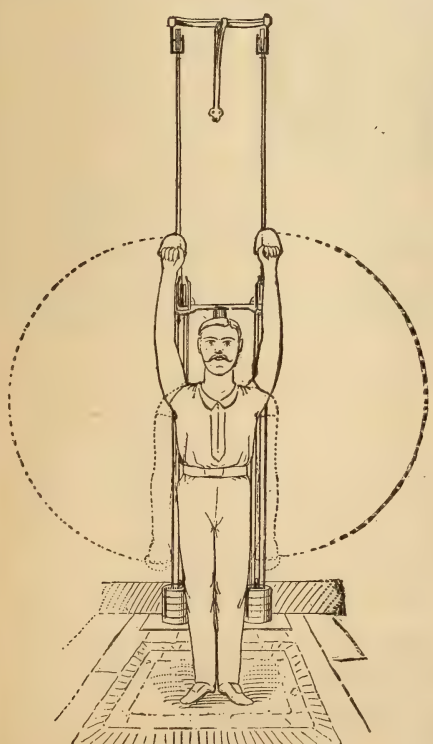
By a copyright formula furnished by us on request, applicants can supply us with all the data necessary to secure fit and satisfactory results while they remain at home. One half the legs and arms furnished by us are made from measurements and profiles without our seeing the wearer. This new method is a great convenience for those living at a distance. Fit always guaranteed.

A treatise of 400 pages and 190 illustrations and nearly a thousand endorsements and testimonals sent to those needing artificial legs or arms, who will give a description of their case. The same will be sent to physicians and surgeons free of charge. Address,

A. A. MARKS, 701 BROADWAY, NEW YORK CITY

The highest awards received at every exhibition. Endorsed by the United States Government, and commissioned by the Surgeon-General of the United States Army to supply limbs to pensioners of the United States.





THE Medical Profession are cordially invited to visit our GYMNASIUM SHOW-ROOM containing over FIVE THOUSAND DOLLARS worth of apparatus for the advancement of physical culture.

OUR O. K. MACHINE

is endorsed by all Physicians who have seen it. It will develop any and every muscle of the body.

ADAPTED TO OLD AND YOUNG, MALE AND FEMALE.

We will mail our Manual of Physical Culture, together with complete catalogue, free, on application.

SPECIAL DISCOUNT TO THE PROFESSION.

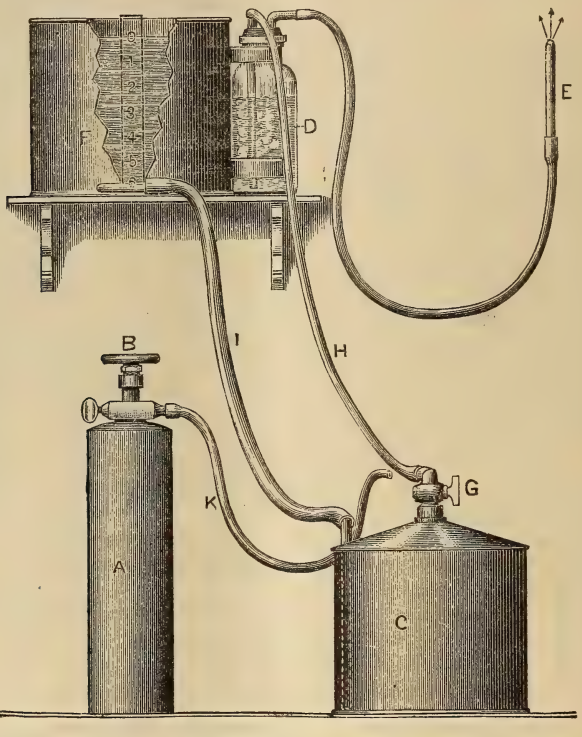
SPORTING AND ATHLETIC GOODS OF EVERY DESCRIPTION.

PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

UNIVERSITY OF MARYLAND
SCHOOL OF MEDICINE.

Eighty-second Annual Announcement, 1888–89. The next regular session will begin October 1st, 1888. A full course of didactic lectures, with ample clinical and dissecting-room facilities.

FACULTY:

GEORGE W. MILTENBERGER, M.D.,
Professor of Obstetrics.

CHRISTOPHER JOHNSON, M.D.,
Emeritus Professor of Surgery.

SAMUEL C. CHEW, M.D.,
Professor of Principles and Practice of Medicine and Hygiene.

FRANK DONALDSON, M.D.,
Clinical Professor of Diseases of the Throat and Chest.

COMPLIMENTARY SAMPLES.

For purifying the atmosphere of the sick-room, for deodorizing and disinfecting the discharges from the sick, for combating contagion, as an antiseptic in the lying-in chamber, and as a general disinfectant for all household purposes, PLATT'S CHLORIDES is now recognized as the standard preparation; and through the kindly interest of the medical profession, coupled with its proved merit, has become established in large demand.

During the past seven years we have personally presented the physicians of the larger cities of the United States samples for test and use, and the result has been so eminently satisfactory, and our solution has become of such sanitary assistance to the doctor, such an aid to the recovery of the patient, and so great a blessing to the attendants, we earnestly desire now to make it known to all who are still unacquainted with it, including particularly the physicians in the smaller cities, towns, and villages, and all points that we can reach by express.

To this end we will, during the next three months, forward by express, *prepaying all charges ourselves*, a full pint bottle of our PLATT'S CHLORIDES to each physician favoring us with name, P. O. address, and express office.

We feel and believe that an odorless and efficient disinfectant is of as great value and usefulness to the doctor of the small place as of the large city, and we trust that the hundreds of worthy practitioners whom we have not hitherto reached we may now hear from.

Yours truly, **HENRY B. PLATT, 36 Platt St., New York.**

N. B.—PLATT'S CHLORIDES is an odorless liquid.
Is indorsed by over 16,000 physicians.
Is used by diluting with from two to twenty parts of water, as may be indicated.
Sprinkled about, leaves no stain or smell.
Is sold by druggists in quart bottles only. Price, 50 cents.
Send for sample and in doing so mention THE MEDICAL AND SURGICAL REPORTER.

UNITED STATES DISPENSATORY.

THE necessity for a **new edition** has been caused by the marvellous growth in medical, pharmaceutical, and chemical science which has developed so many **new remedies** since the fifteenth edition was issued.

The sixteenth edition of this unrivalled commentary, which has steadily retained its supremacy for **more than half a century** as the **trusted authority**, the **acknowledged standard**, the veritable **treasure-house of facts**, for busy pharmacists and physicians, was undertaken as soon as the pressing need for it was clearly shown, and although the sales of the fifteenth edition have been far in excess of any previous one in the history of the book, the determination to keep the **United States Dispensatory** fully abreast with the latest discoveries has compelled the publishers to incur vast expense and labor in its preparation.

THE SIXTEENTH EDITION CONTAINS THE FOLLOWING

NEW FEATURES AND IMPROVEMENTS.

1. Over 800 pages of **new material** have been added, including the latest information about the mydriatic alkaloids, the new antipyretics, antiseptics, etc., etc. This has necessitated the dropping of about five hundred pages of effete matter.

2. The **National Formulary** has been incorporated, and the gain to both authorities of having the valuable information of each connected, so that whilst working from a formula the operator may have a reference to the article on the subject in the Dispensatory, is one that every **practical pharmacist** will thoroughly appreciate.

The Editors of the Sixteenth Edition are

H. C. WOOD, M.D., LL.D.,

Professor of Materia Medica and Therapeutics, and of Diseases of the Nervous System, in the University of Pennsylvania;

JOSEPH P. REMINGTON, Ph.M., F.C.S.,

Professor of Theory and Practice of Pharmacy, and Director of the Pharmaceutical Laboratories in the Philadelphia College of Pharmacy;

AND

SAMUEL P. SADTLER, Ph.D., F.C.S.,

Professor of Chemistry in the Philadelphia College of Pharmacy, and of General and Organic Chemistry in the University of Pennsylvania.

The work will be for sale by all booksellers, or may be had direct of the publishers, free of expense of transportation, by enclosing the price.

PRICE, IN CLOTH EXTRA, $7.00; BEST LEATHER, RAISED BANDS, $8.00; HALF RUSSIA, RAISED BANDS, $9.00.

For facility of reference, Denison's Patent Index will be inserted for $1 additional to above prices.

SPECIFY (BATTLE) WHEN PRESCRIBING OUR PREPARATIONS.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains fifteen grains EACH of pure Chloral Hydrat, and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam,

Dose.—One-half to one fluid-drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritabilily, etc In the restlessness and delirium of fevers, it is absolutely invaluable

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or Pain-relieving principal of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID-DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid-drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid-drachms (more or less, as indicated) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

☞ MUST BE RETURNED IN TEN DAYS ! !

A Strange Thing!

There are about 250 medical journals published in this country which are claimed by their publishers to be the best & cheapest! This can hardly be so; but such is the claim. Some measure their merits with a foot-rule, and some pretend to weigh them.

Now let Every reader take his own rule & scale, and try this: =

A. The Reporter (weekly) about 2000 pages

B. " Compendium (quarterly " 600 "

The Reporter full of hot sparks from the anvil of medical experience =

The Compendium full of well hammered articles: Both for $6.00 a year!

Too few of the subscribers to the Reporter take the Compendium. More ought to!!

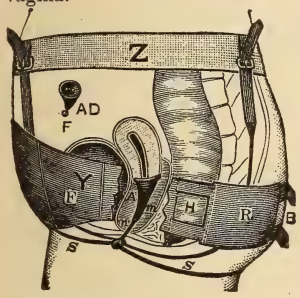
You will get a Specimen copy if you ask for it — perhaps if you don't!

STAUFER'S
UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S). One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in diameter, the difference from one size to another being $\frac{1}{2}$ inch. The size most frequently used is $1\frac{3}{4}$ inches across the cup.

SELECTION In ordering, give measure around waist, just above the hips, and the width of cup, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE The instrument complete, with belt Z, costs $4.00
" " " " " Y, " 5.00

PRUNO-PHOSPHORATED SYRUP.

(SYRUP PRUNO-PHOSPHOR.)

A Tonic of peculiar excellence, used with success in the treatment of Pulmonary Tuberculosis and kindred ailments.

Containing **PRUNUS VIRGINIANA,** with **Lime, Potash, Soda, Iron, Manganese, Quinine, Strychnine,** making a preparation which proves to be of considerable utility.

Pruno-Phosphorated Syrup is a powerful tonic to the nervous system, aiding the digestion and the functions of assimilation at the same time.

It supplies the necessary phosphates to give energy, and thus prevents the attacks of disease.

Especially in America it is necessary to supply in some convenient form a nerve tonic, as business and professional men are worked at high pressure, and exhaust their latent energy. If the brain power is impaired from any cause, digestion immediately suffers, and the whole body, in time, is enfeebled.

Pruno-Phosphorated Syrup contains besides **PRUNUS VIRGINIANA** and the phosphorous compounds, the nerve invigorating drug strychnia—in combination with the blood-enriching iron—all the elements to produce good digestion, pure blood, and as a result, mental activity, uniting with a tonic power the property of calming irritation and diminishing nervous excitability.

The especial recognition which this preparation has received over other combinations of **Iron** and **Quinine,** is attributable to the discovery that it neither causes **Headache** nor interferes with **Digestion.** In cases where even moderate doses of **Quinine** produce head symptoms of such severity that the desired benefit of the alkaloid cannot be obtained, **Pruno-Phosphorated Syrup** may be freely administered without any disagreeable result.

Patients intolerant of **Iron** in every other form can readily assimilate **Pruno-Phosphorated Syrup.**

DOSE.—The *tonic dose,* is one fluid drachm; *stimulant and tonic dose* combined, two fluid drachms.

Descriptive Circular furnished to Physicians on application.

Physicians desirous of giving Pruno-Phosphorated Syrup a trial, and will pay express charges, will be furnished with one regular size bottle free.

SUCCUS ALTERANS

(McDADE.)

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica Lappa Minor, Phytolacca Decandra, Smilax Sarsaparilla, and Xanthoxylum Carolinianum, as collected by Dr. Geo. W. McDade, exclusively for Eli Lilly & Co., and endorsed by Dr. J. Marion Sims.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood* and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree; is endorsed by the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides, and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS is giving satisfactory results in treatment of *Chronic Rheumatism*, and can be used with confidence.

SUCCUS ALTERANS may be given for any length of time, without injury to the patient.

SUCCUS ALTERANS is put up in pint round amber bottles, and *never in bulk*.

PHYSICIANS who have not received Dr. McDade's latest publication, the Monographia Syphilitica, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. Goodwillie, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

ELIXIR PURGANS.

Elixir Purgans (Lilly) reliably stimulates the dormant liver without undue irritation, and has gentle yet positive effect upon the alimentary tract. In Habitual Constipation, so common in Women and Children, it will be found particularly useful. Its endorsement at Bellevue and many other prominent hospitals East and West, as well as its employment in general practice by the most eminent medical men, confirms the experience of years in its use.

Each Teaspoonful Represents	
Rhamnus Purshiana,	**10 grs.**
Euonymus Atropur.,	**8 grs.**
Cassia Acutifolia (Purif.)	**10 grs.**
Iris Versicolor,	**4 grs.**
Hyoscyamus Niger,	**2 grs.**
Aromatics, etc.	

IN PRESCRIBING, PLEASE BE CAREFUL TO WRITE

ELIXIR PURGANS (LILLY),

THAT OTHER PREPARATIONS MAY NOT BE SUBSTITUTED.

HIGHLY RECOMMENDED.

We take pleasure in endorsing the Elixir Purgans (Lilly) as prepared from the above formula, for in it we find a near approach to positive *perfection* in the form of a *Liquid Cathartic*, and, from our experience with the preparation, can highly recommend it to the profession.

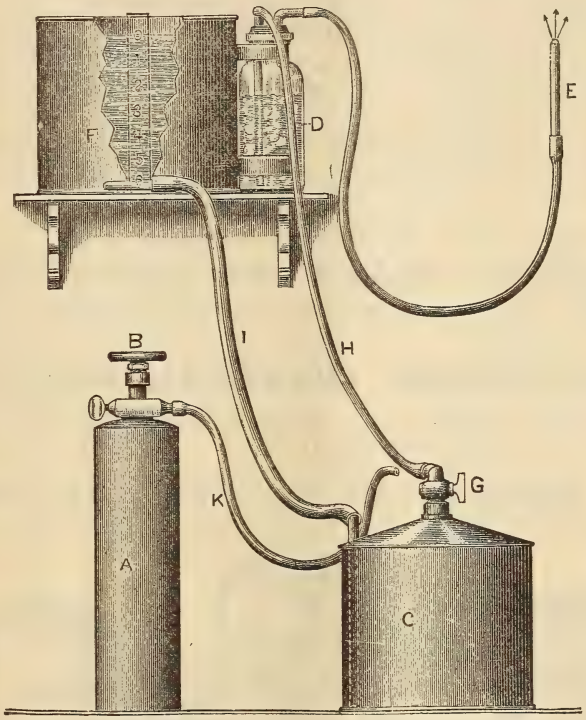
PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

An Important Communication
TO PHYSICIANS.

Thirteen years have now elapsed since the introduction of SCOTT'S EMULSION of PURE NORWEGIAN COD LIVER OIL with HYPOPHOSPHITES of LIME and SODA, since which time its growth and development have been very large, not only in this country but in South America, Great Britain and a large part of Continental Europe, and it has, in a very large degree, supplanted the Plain Cod Liver Oil. Its success is largely due to the happy combination of all its components, making a perfect chemical union, that will not separate for years, which we believe is not true of any other Cod Liver Oil preparation.

The innumerable reports from Physicians, of the brilliant results obtained justifies the statement that in almost every case where Cod Liver Oil is indicated, Scott's Emulsion is infinitely superior.

Physicians who have never tried this Emulsion, or who have been induced to try something else in its stead, will do us the favor to send for sample, and we know they will always use it in preference to plain Cod Liver Oil or any other preparation.

We also call your attention to the following preparations :

CHERRY-MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula.)

Prepared from carefully selected German Buckthorn Bark, Juglans Bark, and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above – delivered free.

Treatment of Consumption

A Simplified Apparatus for the preparation and introduction of gases into the bowel (according to Dr. Bergeon's method) by Dr. H. N. Bryan, of Philadelphia.

This apparatus has advantages which others do not possess, and, being considerably lower in price than any devised for a similar purpose, it should commend itself to the favorable consideration of the medical profession. An illustrated descriptive circular sent to any address, on application.

Price of Apparatus, complete, in a neat portable Telescopic Case with Handle, ***$6.00***

Sample Card of the Iron-Dyed Silk (14 sizes) will be sent to any address, on application. Price, per Reel, 10 Cents.

FOR THE ILL EFFECTS ATTENDING SUMMER HEAT

«NERVOUS HEADACHES»

INSOMNIA, MIGRAINE, and where your patients are tired, both mentally and physically, due to excessive heat, they will be greatly relieved by a dose or two of

EFFERVESCENT

BROMO

(WARNER & CO.)

SODA

℞ Bromide Sodium, grs. xxx.
Caffein, - gr. i.

In each heaping teaspoonful, to be taken in half a glassful of water and drank while effervescing, forming a delightfully cool and refreshing draught, to be repeated in half an hour if necessary.

☞ Please specify (Bromo-Soda) WARNER & Co., and get the full therapeutic effect, thereby avoiding the substitution of other "Bromos," the composition of which is not known.

Wm. R. Warner & Co.

Originators and Manufacturers of Effervescent Bromo-Soda, Bromo-Potash, and a full line of Effervescent Salts.

INGLUVIN! VENTRICULUS CALLOSUS GALLINACEUS. A powder, prescribed in the same manner doses, and combinations as Pepsin, used in all cases where Pepsin is required with superior advantage. A specific in vomiting in gestation, in doses of 10 to 20 grs.

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterated.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: MCARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

Mention this Journal. McARTHUR HYPOPHOSPHITE CO., BOSTON, Mass

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength and efficacy than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"The most suitable aperient for prolonged use."—Prof. SEEGEN.

'After twenty years' use, I appreciate it as highly as ever."—Prof. VIRCHOW.

OF ALL DRUGGISTS AND MINERAL-WATER DEALERS.

YOU WILL FIND **BROMO-CAFFEINE** OF GREATEST SERVICE IN

SPECIFY (BATTLE) WHEN PRESCRIBING OUR PREPARATIONS.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains fifteen grains EACH of pure Chloral Hydrat, and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam,

Dose.—One-half to one fluid-drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritabilily, etc In the restlessness and delirium of fevers, it is absolutely invaluable

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or Pain-relieving principal of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID-DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid-drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid-drachms (more or less, as indicated) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

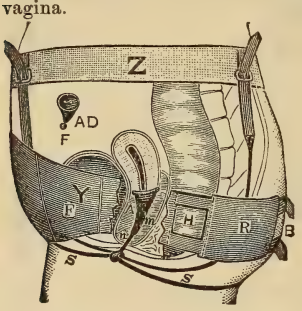
STAUFER'S
UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S). One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in diameter, the difference from one size to another being $\frac{1}{2}$ inch. The size most frequently used is $1\frac{3}{4}$ inches across the cup.

SELECTION In ordering, give measure around waist, just above the hips, and the width of cup, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE

The instrument complete, with belt Z, costs	$4.00
" " " " " Y, "	5.00

COLDEN'S LIQUID BEEF TONIC.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in the Treatment of all Cases of Debility.

☞ ESTABLISHED 15 YEARS. ☞ ENDORSED BY SCORES OF PHYSICIANS. ☞ BEWARE OF IMITATIONS.

☞ ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS.

COLDEN'S LIQUID BEEF TONIC consists of the Extract of Beef (by Baron Liebig's process), spirit rendered non-injurious to the most delicate stomach by extraction of Fusel Oil, Soluble Citrate of Iron, Cinchona, Gentian, and simple aromatics. An official analysis of this preparation by the eminent chemist, ARTHUR HILL HASSALL, M.D., F.R.S., and an endorsement of by Sir ERASMUS WILSON, F.R.S., is printed on the label of each bottle.

In the treatment of all cases of Debility, Convalescence from severe illness, Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Lack of Nerve Tone, and of the Alcohol and Opium Habits, and all maladies requiring a Tonic Nutrient, it is superior to all other preparations.

It acts directly on the sentient gastric nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement, an appetite.—By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of SOLUBLE CITRATE OF IRON, and which is designated on the label WITH IRON, "No. 1;" while the same preparation, WITHOUT IRON, is designated on the label as "No. 2."

☞ *I will, upon application, send a sample bottle of* COLDEN'S LIQUID BEEF TONIC *to any physician in regular standing. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation physicians should be particular to mention* "COLDEN'S," *viz.,* "EXT. CARNIS FL. COMP. (COLDEN)." *It is put up in pint bottles, and* CAN BE HAD OF WHOLESALE AND RETAIL DRUGGISTS GENERALLY THROUGHOUT THE UNITED STATES.

C. N. CRITTENTON, Sole Agent, 115 Fulton Street, New York.

GLENN'S SULPHUR SOAP.

All physicians know the great value of the local use of Sulphur in the TREATMENT OF DISEASES OF THE SKIN. GLENN'S SULPHUR SOAP is the ORIGINAL and BEST combination of its kind, and the one now generally used. For sale by all Druggists at 25 cents a cake, or three cakes for 60 cents. Beware of counterfeits.

CONSTANTINE'S PINE TAR SOAP.

BY FAR THE BEST TAR SOAP MADE. Has been on trial among physicians for very many years as a toilet soap and healing agent, and its superior virtues have been unanimously conceded in ALL CASES WHERE THE USE OF TAR IS INDICATED.

Unsolicited expressions of its excellence have been received from the Medical Faculty generally. None genuine unless stamped "A. A. Constantine's Persian Healing Pine Tar Soap." For sale by all Druggists.

Wholesale Depot, C. N. CRITTENTON, 115 Fulton Street, New York.

Please mention this Journal. ☞ Samples of above Soaps SENT FREE on application to any physician enclosing card.

THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES, M.D.

"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

Sent on receipt of 75 Cents.

SPORTING AND ATHLETIC GOODS OF EVERY DESCRIPTION.

PRUNO-PHOSPHORATED SYRUP.

(SYRUP PRUNO-PHOSPHOR.)

A Tonic of peculiar excellence, used with success in the treatment of Pulmonary Tuberculosis and kindred ailments.

Containing **PRUNUS VIRGINIANA,** with **Lime, Potash, Soda, Iron, Manganese, Quinine, Strychnine,** making a preparation which proves to be of considerable utility.

Pruno-Phosphorated Syrup is a powerful tonic to the nervous system, aiding the digestion and the functions of assimilation at the same time.

It supplies the necessary phosphates to give energy, and thus prevents the attacks of disease.

Especially in America it is necessary to supply in some convenient form a nerve tonic, as business and professional men are worked at high pressure, and exhaust their latent energy. If the brain power is impaired from any cause, digestion immediately suffers, and the whole body, in time, is enfeebled.

Pruno-Phosphorated Syrup contains besides **PRUNUS VIRGINIANA** and the phosphorous compounds, the nerve invigorating drug strychnia—in combination with the blood-enriching iron—all the elements to produce good digestion, pure blood, and as a result, mental activity, uniting with a tonic power the property of calming irritation and diminishing nervous excitability.

The especial recognition which this preparation has received over other combinations of **Iron** and **Quinine,** is attributable to the discovery that it neither causes **Headache** nor interferes with **Digestion.** In cases where even moderate doses of **Quinine** produce head symptoms of such severity that the desired benefit of the alkaloid cannot be obtained, **Pruno-Phosphorated Syrup** may be freely administered without any disagreeable result.

Patients intolerant of **Iron** in every other form can readily assimilate **Pruno-Phosphorated Syrup.**

DOSE.—The *tonic dose,* is one fluid drachm; *stimulant and tonic dose* combined, two fluid drachms.

Descriptive Circular furnished to Physicians on application.

Physicians desirous of giving Pruno-Phosphorated Syrup a trial, and will pay express charges, will be furnished with one regular size bottle free.

UNION PHARMACEUTICAL COMPANY,

18 & 20 PLATT STREET

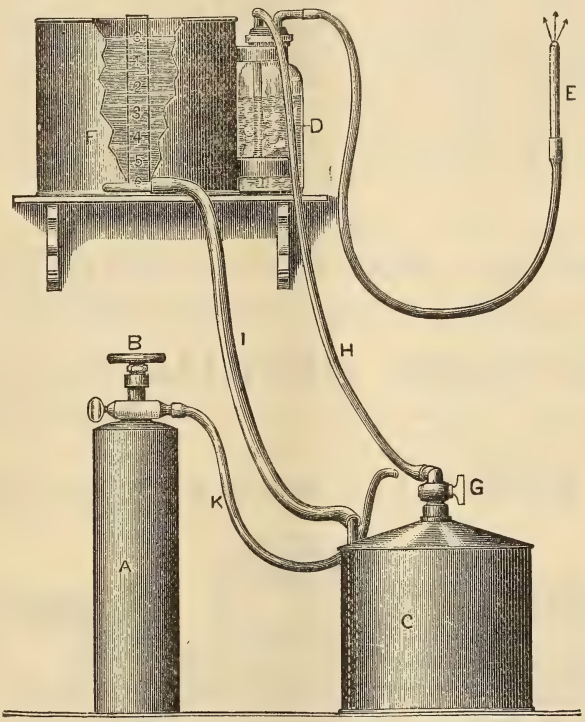
PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

An Important Communication
TO PHYSICIANS.

Thirteen years have now elapsed since the introduction of SCOTT'S EMULSION of PURE NORWEGIAN COD LIVER OIL with HYPOPHOSPHITES of LIME and SODA, since which time its growth and development have been very large, not only in this country but in South America, Great Britain and a large part of Continental Europe, and it has, in a very large degree, supplanted the Plain Cod Liver Oil. Its success is largely due to the happy combination of all its components, making a perfect chemical union, that will not separate for years, which we believe is not true of any other Cod Liver Oil preparation.

The innumerable reports from Physicians, of the brilliant results obtained justifies the statement that in almost every case where Cod Liver Oil is indicated, Scott's Emulsion is infinitely superior.

Physicians who have never tried this Emulsion, or who have been induced to try something else in its stead, will do us the favor to send for sample, and we know they will always use it in preference to plain Cod Liver Oil or any other preparation.

We also call your attention to the following preparations:

CHERRY-MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula.)

Prepared from carefully selected German Buckthorn Bark, Juglans Bark, and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above – delivered free.

SCOTT & BOWNE, 132 South Fifth Ave., New York.

PRESIDENT CLEVELAND'S PRIZE

for the three best babies at the Aurora County Fair, in 1887, was given to these triplets, Mollie, Ida, and Ray, children of Mrs. A. K. Dart, Hamburgh, N. Y. She writes: "Last August the little ones became very sick, and as I could get no other food that would agree with them, I commenced the use of Lactated Food. It helped them immediately, and they were soon as well as ever, and I consider it very largely due to the Food that they are now so well.

LACTATED FOOD

EASILY ASSIMILATED.

A regular size package of Lactated Food will be sent, charges paid, to any Physician who is not yet acquainted with its merits. Correspondence solicited.

WELLS, RICHARDSON & CO., Burlington, Vt. and Montreal, P. Q.

UNIVERSITY OF MARYLAND

SCHOOL OF MEDICINE.

Eighty-second Annual Announcement, 1888–89. The next regular session will begin October 1st, 1888. A full course of didactic lectures, with ample clinical and dissecting-room facilities.

FACULTY:

GEORGE W. MILTENBERGER, M.D.,
Professor of Obstetrics.

CHRISTOPHER JOHNSON, M.D.,
Emeritus Professor of Surgery.

SAMUEL C. CHEW, M.D.,
Professor of Principles and Practice of Medicine and Hygiene.

FRANK DONALDSON, M.D.,
Clinical Professor of Diseases of the Throat and Chest.

WILLIAM T. HOWARD, M.D.,
Professor of Diseases of Women and Children and Clinical Medicine.

JULIAN J. CHISOLM, M.D.,
Professor of Eye and Ear Diseases.

FRANCIS T. MILES, M.D.,
Professor of Physiology and Clinical Professor of Diseases of Nervous System.

L. McLANE TIFFANY, M.D.,
Professor of Surgery.

J. EDWIN MICHAEL, M.D.,
Professor of Anatomy and Clinical Surgery.

I. EDMONSON ATKINSON, M.D.,
Professor of Materia Medica and Therapeutics, Clinical Medicine and Dermatology.

R. DORSEY COALE, PH.D.,
Professor of Chemistry and Toxicology.

HERBERT HARLAN, M.D.,
Demonstrator of Anatomy.

For catalogue and further information, address: **Dr. J. EDWIN MICHAEL, Dean, 937 Madison Avenue.**

DENTAL DEPARTMENT.

Seventh Annual Announcement. Next regular session begins October 1st, 1888. New and excellent Infirmary and Laboratory, with abundance of clinical material.

FACULTY:

FRED. J. S. GORGAS, M.D., D.D.S.,
Professor of Principles of Dental Science, Dental Surgery, and Dental Mechanism.

JAMES H. HARRIS, M.D., D.D.S.,
Professor of Operative and Clinical Dentistry.

I. EDMONDSON ATKINSON, M.D.,
Professor of Materia Medica and Therapeutics.

FRANCIS T. MILES, M.D.,
Professor of Physiology.

L. McLANE TIFFANY, M.D.,
Clinical Professor of Oral Surgery.

J. EDWIN MICHAEL, M.D.,
Professor of Anatomy.

R. DORSEY COALE, PH.D.,
Professor of Chemistry.

JOHN C. UHLER, M.D., D.D.S.,
Demonstrator of Mechanical Dentistry.

CHAS. L. STEEL, M.D., D.D.S.,
Demonstrator of Operative Dentistry.

HERBERT HARLAN, M.D.,
Demonstrator of Anatomy.

AND EIGHT ASSISTANT DEMONSTRATORS.

Treatment of Consumption

A Simplified Apparatus for the preparation and introduction of gases into the bowel (according to Dr. Bergeon's method) by Dr. H. N. Bryan, of Philadelphia.

This apparatus has advantages which others do not possess, and, being considerably lower in price than any devised for a similar purpose, it should commend itself to the favorable consideration of the medical profession. An illustrated descriptive circular sent to any address, on application.

Price of Apparatus, complete, in a neat portable Telescopic Case with Handle, ***$6.00***

Sample Card of the Iron-Dyed Silk (14 sizes) will be sent to any address, on application. Price, per Reel, 10 Cents.

No. 411 & 413 Walnut St., Philadelphia

FOR THE ILL EFFECTS ATTENDING SUMMER HEAT

«NERVOUS HEADACHES»

INSOMNIA, MIGRAINE, and where your patients are tired, both mentally and physically, due to excessive heat, they will be greatly relieved by a dose or two of

EFFERVESCENT

BROMO

(WARNER & CO.)

SODA

℞ Bromide Sodium, grs. xxx.
Caffein, - gr. i.

In each heaping teaspoonful, to be taken in half a glassful of water and drank while effervescing, forming a delightfully cool and refreshing draught, to be repeated in half an hour if necessary.

☞ Please specify (Bromo-Soda) WARNER & Co., and get the full therapeutic effect, thereby avoiding the substitution of other "Bromos," the composition of which is not known.

Wm. R. Warner & Co.

Originators and Manufacturers of Effervescent Bromo-Soda, Bromo-Potash, and a full line of Effervescent Salts.

INGLUVIN! VENTRICULUS CALLOSUS GALLINACEUS. A powder, prescribed in the same manner doses, and combinations as Pepsin, used in all cases where Pepsin is required with superior advantage. A specific in vomiting in gestation, in doses of 10 to 20 grs.

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterated.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: MCARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

Mention this Journal. McARTHUR HYPOPHOSPHITE CO., BOSTON, Mass

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength and efficacy than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"The most suitable aperient for prolonged use."—Prof. SEEGEN.

'After twenty years' use, I appreciate it as highly as ever."—Prof. VIRCHOW.

OF ALL DRUGGISTS AND MINERAL-WATER DEALERS.

YOU WILL FIND **BROMO-CAFFEINE** OF GREATEST SERVICE IN

SPECIFY (BATTLE) WHEN PRESCRIBING OUR PREPARATIONS.

BROMIDIA

THE HYPNOTIC.

FORMULA.—
Every Fluid drachm contains fifteen grains EACH of pure Chloral Hydrat, and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam,

Dose.—One-half to one fluid-drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—
Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritabilily, etc In the restlessness and delirium of fevers, it is absolutely invaluable

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or Pain-relieving principal of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—
Same as Opium or Morphia.

Dose.—(ONE FLUID-DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—
Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid-drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid-drachms (more or less, as indicated) three times a day, before meals.

Indications.—
Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

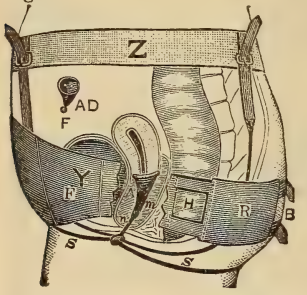
SPECIFY (BATTLE) WHEN PRESCRIBING OUR PREPARATIONS.

STAUFER'S
UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S). One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in diameter, the difference from one size to another being $\frac{1}{2}$ inch. The size most frequently used is $1\frac{3}{4}$ inches across the cup.

SELECTION In ordering, give measure around waist, just above the hips, and the width of cup, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE

The instrument complete, with belt Z, costs $4.00
" " " " " Y, " 5.00

SEND MONEY WITH ORDER.

Orders should be sent to

THE MODEL LEDGER
FOR PHYSICIANS.

"I received your "**Model Ledger**" all right. Have examined it and like the plan very much. . . . . I would advise any young physician to adopt your plan, and old physicians would not be injured by it. Yours truly,

HENRY L. JOY.

Marshall, Mich, Oct. 4, 1888.

We want all of our Subscribers to see our = Model Ledger =

So we will send a copy to any paid-up subscriber who will write, saying he will either buy the book when he sees it, or send it back in good order. We will mail a copy in a secure case - in which it can be sent back, if you don't want to keep it.

If you keep it, it will cost just Four Dollars: if you send it back the inspection will cost only Thirty four cents.

and the Trouble of remailing it to us:

Write now to

Drs. Randolph & Dulles.

P.O. Box 843. Philadelphia.

☞ Must be Returned or Paid for in TEN DAYS!

A Strange Thing!

There are about 250 medical journals published in this country which are claimed by their publishers to be the best & cheapest! This can hardly be so; but such is the claim. Some measure their merits with a foot-rule, and some pretend to weigh them.

Now let every reader take his own rule & scale, and try this: =

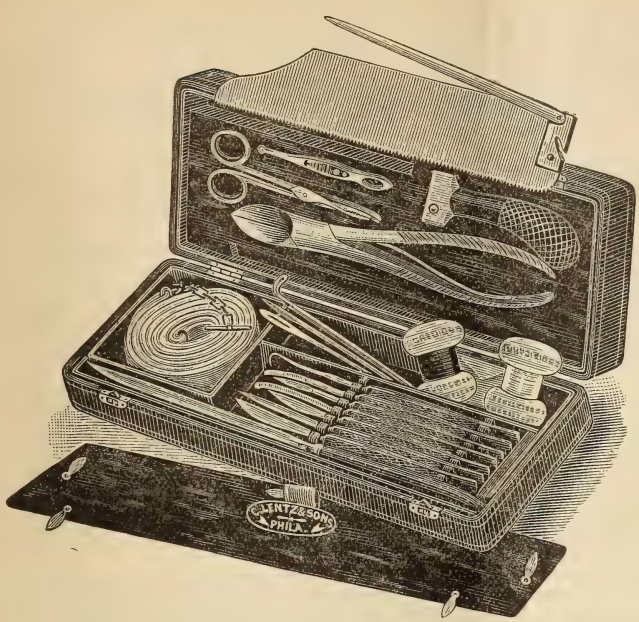
A. The Reporter (weekly) about 2000 pages
B. " Compendium (quarterly) " 600 "

The Reporter full of hot sparks from the anvil of medical experience =

The Compendium full of well hammered articles: Both for $6.00 a Year!

Too few of the subscribers to the Reporter take the Compendium. More ought to!!

You will get a Specimen Copy if you ask for it — perhaps if you don't!



LENTZ'S
NEW COMPACT

COLDEN'S LIQUID BEEF TONIC.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in the Treatment of all Cases of Debility.

☞ ESTABLISHED 15 YEARS. ☞ ENDORSED BY SCORES OF PHYSICIANS. ☞ BEWARE OF IMITATIONS.

☞ ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS.

COLDEN'S LIQUID BEEF TONIC consists of the Extract of Beef (by Baron Liebig's process), spirit rendered non-injurious to the most delicate stomach by extraction of Fusel Oil, Soluble Citrate of Iron, Cinchona, Gentian, and simple aromatics. An official analysis of this preparation by the eminent chemist, ARTHUR HILL HASSALL, M.D., F.R.S., and an endorsement of by Sir ERASMUS WILSON, F.R.S., is printed on the label of each bottle.

In the treatment of all cases of Debility, Convalescence from severe illness, Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Lack of Nerve Tone, and of the Alcohol and Opium Habits, and all maladies requiring a Tonic Nutrient, it is superior to all other preparations.

It acts directly on the sentient gastric nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement, an appetite.—By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of SOLUBLE CITRATE OF IRON, and which is designated on the label WITH IRON, "No. 1;" while the same preparation, WITHOUT IRON, is designated on the label as "No. 2."

☞ *I will, upon application, send a sample bottle of* COLDEN'S LIQUID BEEF TONIC *to any physician in regular standing. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation physicians should be particular to mention* "COLDEN'S," *viz.*, "EXT. CARNIS FL. COMP. (COLDEN)." *It is put up in pint bottles, and* CAN BE HAD OF WHOLESALE AND RETAIL DRUGGISTS GENERALLY THROUGHOUT THE UNITED STATES.

C. N. CRITTENTON, Sole Agent, 115 Fulton Street, New York.

GLENN'S SULPHUR SOAP.

All physicians know the great value of the local use of Sulphur in the TREATMENT OF DISEASES OF THE SKIN. GLENN'S SULPHUR SOAP is the ORIGINAL and BEST combination of its kind, and the one now generally used. For sale by all Druggists at 25 cents a cake, or three cakes for 60 cents. Beware of counterfeits.

CONSTANTINE'S PINE TAR SOAP.

BY FAR THE BEST TAR SOAP MADE. Has been on trial among physicians for very many years as a toilet soap and healing agent, and its superior virtues have been unanimously conceded in ALL CASES WHERE THE USE OF TAR IS INDICATED.

Unsolicited expressions of its excellence have been received from the Medical Faculty generally. None genuine unless stamped "A. A. Constantine's Persian Healing Pine Tar Soap." For sale by all Druggists.

Wholesale Depot, C. N. CRITTENTON, 115 Fulton Street, New York.

Please mention this Journal. ☞ Samples of above Soaps SENT FREE on application to any physician enclosing card.

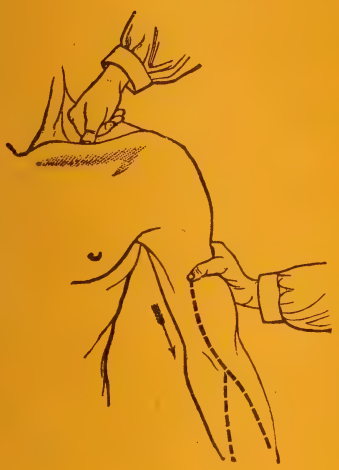
THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES, M.D.



"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every Fluid drachm contains fifteen grains EACH of pure Chloral Hydrat, and purified Brom. Pot., and one-eighth grain EACH, of gen. imp. ext. Cannabis Ind. and Hyoscyam,

Dose.—One-half to one fluid-drachm in WATER or SYRUP every hour until sleep is produced.

Indications.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritabilily, etc In the restlessness and delirium of fevers, it is absolutely invaluable

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or Pain-relieving principal of Opium, the Narcotic and Convulsive elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, etc.

Indications.—

Same as Opium or Morphia.

Dose.—(ONE FLUID-DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

THE ALTERATIVE AND UTERINE TONIC.

FORMULA.—

Iodia is a combination of Active Principles obtained from the Green Roots of STILLINGIA, HELONIAS, SAXIFRAGA, Menispermum, and Aromatics. Each fluid-drachm also contains five grains IOD. POTAS. and three grains PHOS. IRON.

Dose.—One or two fluid-drachms (more or less, as indicated) three times a day, before meals.

Indications.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhœa, Menorrhagia, Leucorrhœa, Amenorrhœa, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

The Sub-Committee of Dietetics

ON

INFANT-FEEDING,

AT THE

American Medical Association, May 9, 1888,

Recommended a formula for an Infants' Food as a very efficient substitute for mothers' milk. This formula closely resembles that of CARNRICK'S FOOD, and no other prepared food in the market can claim a like resemblance.

THE FORMULAS.

℞

Formula Recommended by the Sub-Committee on Infant-Feeding, as above stated.

Desiccated partly peptonized milk in the form of a milk-food, containing partly converted starch (soluble starch or dextrin) and a small quantity of lactose, is a convenient and (when well made) a very efficient substitute for mothers' milk.

Formula for Carnrick's Food.

Evaporated or desiccated milk, partly peptonized and thoroughly sterilized by heat, ... 45 parts.

Dextrin, Soluble Starch and Milk Sugar, ... 55 parts.

This forms a fine dry powder, which will keep in any climate, and only requires the addition of water to render it a suitable nutrient for infants, or adults whose digestive powers have become impaired.

Carnrick's Food contains about five per cent. of fat. This is the largest amount possible to combine in a stable preparation presented in a powdered form. In cases where a larger amount of fat is desirable, a small quantity of cream may be added.

We do not claim this food to be "a PERFECT substitute for human milk."
But we do claim that

CARNRICK'S FOOD APPROACHES NEARER TO HUMAN MILK IN CONSTITUENTS AND DIGESTIBILITY THAN ANY OTHER PREPARED FOOD THAT HAS EVER BEEN PRODUCED,

and that it is the only infants' food that will, without the addition of cows' milk, thoroughly nourish a child from its birth.

We believe that CARNRICK'S FOOD solves the problem of a reliable substitute for human milk. The Casein of cows' milk, by partial predigestion with freshly made Pancreatine, is rendered as easily digestible by the infant as human milk, and, by thorough sterilization with heat, made aseptic, thus avoiding the objection to the use of milk foods in Cholera Infantum.

Full information regarding the process of manufacture will be cheerfully furnished and samples sent free to those who wish to test CARNRICK'S FOOD.

REED & CARNRICK, New York

A Strange Thing!

There are about 250 medical journals published in this country which are claimed by their publishers to be the best & cheapest! This can hardly be so; but such is the claim. Some measure their merits with a foot-rule, and some pretend to weigh them.

Now let every reader take his own rule & scale, and try this: =

A. The Reporter (weekly) about 2000 pages
B. " Compendium (quarterly) " 600 "

The Reporter full of hot sparks from the anvil of medical experience =

The Compendium full of well hammered articles. Both for $6.00 a year!

Too few of the subscribers to the Reporter take the Compendium. More ought to!!

You will get a Specimen copy if you ask for it — perhaps if you don't!

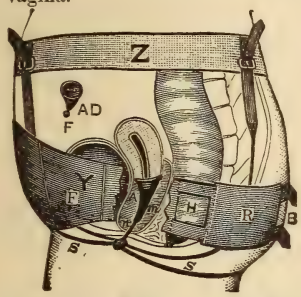
STAUFER'S

UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S). One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in diameter, the difference from one size to another being $\frac{1}{8}$ inch. The size most frequently used is $1\frac{3}{4}$ inches across the cup.

SELECTION In ordering, give exact measure around the hips, just below crest of ilium, and the width of cup on top, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE The instrument complete, with belt Z, costs $4.00
" " " " " Y, " 5.00

PRUNO-PHOSPHORATED SYRUP.

(SYRUP PRUNO-PHOSPHOR.)

A Tonic of peculiar excellence, used with success in the treatment of Pulmonary Tuberculosis and kindred ailments.

Containing **PRUNUS VIRGINIANA,** with **Lime, Potash, Soda, Iron, Manganese, Quinine, Strychnine,** making a preparation which proves to be of considerable utility.

Pruno-Phosphorated Syrup is a powerful tonic to the nervous system, aiding the digestion and the functions of assimilation at the same time.

It supplies the necessary phosphates to give energy, and thus prevents the attacks of disease.

Especially in America it is necessary to supply in some convenient form a nerve tonic, as business and professional men are worked at high pressure, and exhaust their latent energy. If the brain power is impaired from any cause, digestion immediately suffers, and the whole body, in time, is enfeebled.

Pruno-Phosphorated Syrup contains besides **PRUNUS VIRGINIANA** and the phosphorous compounds, the nerve invigorating drug strychnia—in combination with the blood-enriching iron—all the elements to produce good digestion, pure blood, and as a result, mental activity, uniting with a tonic power the property of calming irritation and diminishing nervous excitability.

The especial recognition which this preparation has received over other combinations of **Iron** and **Quinine,** is attributable to the discovery that it neither causes **Headache** nor interferes with **Digestion.** In cases where even moderate doses of **Quinine** produce head symptoms of such severity that the desired benefit of the alkaloid cannot be obtained, **Pruno-Phosphorated Syrup** may be freely administered without any disagreeable result.

Patients intolerant of **Iron** in every other form can readily assimilate **Pruno-Phosphorated Syrup.**

DOSE.—The *tonic dose*, is one fluid drachm; *stimulant and tonic dose* combined, two fluid drachms.

Descriptive Circular furnished to Physicians on application.

Physicians desirous of giving Pruno-Phosphorated Syrup a trial, and will pay express charges, will be furnished with one regular size bottle free.

UNION PHARMACEUTICAL COMPANY,

Antifebrin, ... 3 " 5 "
Antipyrine, ... 3, 5 " 10 "
Blaud's
Ferri. Sulph. Exsic., 2 grs., Potass. Carb., 1 4-5 grs., Sacch. Alb., 1⅔ grs.
Iodol. . . . . ½, 1, 2, 3, and 5 grs.
Manganese Binoxide, ... 1 " 2 "
Opium, Camphor and Carb. Ammon., Opium Denarcot. ½ gr., Camphor, 2 grs., Ammon. Carb., 2½ grs.

Quinia Tannate, and Chocolate 1 grain, Quiniæ Tannat. 1 gr., Ext. Cacao, 9 grs.
Quinia Tannate and Chocolate, 2½ grs., Quiniæ Tannat. 2½ grs., Ext. Cacao. 7½ grs.
Salol, ... 2½ and 5 grs.
Sodium Succinate, ... 2 " 5 "
Thalline Sulphate, ... 2, 3 " 5 "
Trinitrin (Nitro-Glycerin), 1-20, 1-25, 1-33, 1-50, 1-100, and 1-200 gr.
Terpin Hydrate, ... 2, 3 and 5 grs.

ANTISEPTIC TABLETS.

7.7 Hydrarg. Chlor. Corros., 7.3 Ammonium Chloride.

More than six months since, we sent a circular to the drug trade, stating that we had discontinued the manufacture of the Antiseptic Tablets introduced by us several years since at the suggestion of Dr. Charles Meigs Wilson, of this city. We have, however, received so many letters from physicians urging us to resume the manufacture, insisting that the Tablets prepared by us dissolved more readily and were more satisfactory than any substitute they had been able to procure, that we feel we could not ignore such persistent demands from our medical friends who have found our tablets an absolute necessity. We have therefore concluded to again prepare them, in a building entirely separate from our main establishment, with appliances and admirably devised protection by means of improved respirators, that will completely overcome any harmful effects to those engaged in their manufacture.

Druggists and physicians will be glad to learn that the Tablets as now prepared are perfectly white and free from the coloring-matter that we formerly added. This was done to lessen the danger of their being taken, or used in mistake; to guard against any such possibility, each Tablet, as now made, has the word "POISON" stamped upon it.

JOHN WYETH & BROTHER,

CHEMISTS, PHILADELPHIA.

The Curd of Cow's Milk Made as Soft and Digestible as that of Woman's Milk.

"From experiments which I have recently made — and my thanks are due to Prof. Salisbury of the Woman's Medical College, for assistance — it seems that the claim which is made by the advocates of the MELLIN'S FOOD is true, and that the addition of this food to cow's milk does cause it to break up in very small, flaky curds."— *Dr. Chas. Warrington Earle, Professor of Diseases of Children, Woman's Medical College, Professor of Obstetrics, College Physicians and Surgeons, Chicago, in his paper on Infant Feeding, before the American Medical Association, May, 1888.*

Any physician having a case in which he desires to test MELLIN'S FOOD can obtain a sample sufficient for trial, free of all expense, by application.

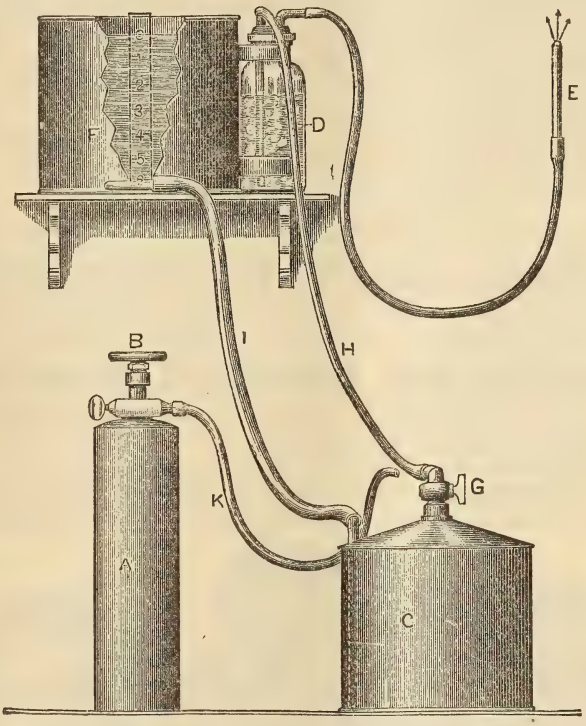
PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

An Important Communication
TO PHYSICIANS.

Thirteen years have now elapsed since the introduction of SCOTT'S EMULSION of PURE NORWEGIAN COD LIVER OIL with HYPOPHOSPHITES of LIME and SODA, since which time its growth and development have been very large, not only in this country but in South America, Great Britain and a large part of Continental Europe, and it has, in a very large degree, supplanted the Plain Cod Liver Oil. Its success is largely due to the happy combination of all its components, making a perfect chemical union, that will not separate for years, which we believe is not true of any other Cod Liver Oil preparation.

The innumerable reports from Physicians, of the brilliant results obtained justifies the statement that in almost every case where Cod Liver Oil is indicated, Scott's Emulsion is infinitely superior.

Physicians who have never tried this Emulsion, or who have been induced to try something else in its stead, will do us the favor to send for sample, and we know they will always use it in preference to plain Cod Liver Oil or any other preparation.

We also call your attention to the following preparations:

CHERRY-MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula.)

Prepared from carefully selected German Buckthorn Bark, Juglans Bark, and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Ave., New York.

P. O. Box 843. PHILADELPHIA.

REPORTER VACCINE VIRUS.

(HUMANIZED.)

For some time we have ceased to advertise Vaccine Virus, for a very good reason, viz: **We could not get what we found reliable.** Now we can, and offer our subscribers Crusts from healthy infants at

ONE DOLLAR, OR TWO DOLLARS

according to size. They are from the best source we know of, and we can recommend them.

But dealing in Vaccine Virus is an accommodation to our subscribers, and not a source of material profit to us; so we must have **Money sent with Order.** If crusts don't take, we will get another.

DRS. RANDOLPH & DULLES,

P. O. Box 843. PHILADELPHIA.

FOR THE INSANE.

CINCINNATI SANITARIUM.

Private Hospital and Residence.

(**Incorporated 1873.**)

Proprietary Interest Strictly Unprofessional.

Both sexes and all classes of mental and nervous diseases provided for.

Forty minutes by rail from C. H. & D. depot, Cincinnati. Address,

ORPHEUS EVERTS, M.D., Sup't.

COLLEGE HILL, OHIO.

DR. WARNER'S
HEALTH UNDERWEAR,

Made from pure Camel's Hair and fine Australian Wool.

This is the best Underwear made.
It is free from all dye.
It is the most durable.
It will not shrink in washing.
It will not irritate the skin.
It has special electric properties.
It is a protection against colds, catarrh, rheumatism and malaria.

Manufactured in all styles for Men, Women and Children. For sale by all leading merchants. Catalogue, with prices, sent on application.

Warner Bro's, 359 Broadway, N. Y.

DETROIT COLLEGE OF MEDICINE.

SESSION 1888-89.

Clinical and Practical teaching are made an important feature of this College. Clinical instruction is given daily at HARPER, ST. MARY'S, and ST. LUKE'S HOSPITAL, at the COLLEGE, at COLLEGE EYE and EAR INFIRMARY, ST. MARY S FREE EYE and EAR INFIRMARY, and at the three FREE DISPENSARIES. The facilities offered by this college are unsurpassed for the practical study of MEDICINE, SURGERY, OBSTETRICS, GYNÆCOLOGY, DISEASES OF CHILDREN, GENITO-URINARY, and ORTHOPÆDIC SURGERY, OPHTHALMOLOGY and OTOLOGY, DERMATOLOGY and LARYNGOLOGY.

REGULAR SESSION opens on Wednesday, September 26, and continues six months. During the session, the Professors will take special pains to examine the Students upon the subjects of the previous lectures.

SPRING SESSION begins March 27th, 1889, and closes June 17th.

FEES.—Matriculation fee, $5; Fees for Regular Session, $50; Spring Session, $10, to those who attend the regular term—to all others, $25; Hospital Fee, $10; Graduation Fee, $30; Perpetual Ticket, $100.

For further particulars, and for College Circular, apply to

H. O. WALKER, M.D., Secretary,
33 Lafayette Ave., Detroit, Mich.

Dr. Cupid's Advice.

It is a full and complete diet, prepared with water only. Always uniform in quality, and the most economical food available.

THOMAS LEEMING & CO., SOLE AGENTS, NEW YORK.

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterated.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: McARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

Mention this Journal. McARTHUR HYPOPHOSPHITE CO., BOSTON, Mass.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength and efficacy than heretofore.

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"The most suitable aperient for prolonged use."—Prof. SEEGEN.

'After twenty years' use, I appreciate it as highly as ever."—Prof. VIRCHOW.

OF ALL DRUGGISTS AND MINERAL-WATER DEALERS.

YOU WILL FIND **BROMO-CAFFEINE** OF GREATEST SERVICE IN OF ALL TYPES **NERVOUS HEADACHES** OF ALL TYPES

Headaches from Loss of Sleep, Physical Fatigue, Excessive Study, Mental Anxiety, Neurasthenia, Dysmenorrhœa, Pregnancy, or other Ovarian Irritation. Relieves Insomnia, and is very useful in Asthma, Whooping Cough and Nervous Cough. Prevents Tinnitis Aurium during the administration of Quinine. Cures Sea Sickness, Quiets the Restlessness of Alcoholism, Morphia Craving, &c. Relieves Anxiety and Promotes Sleep.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

ST. LOUIS, MO.

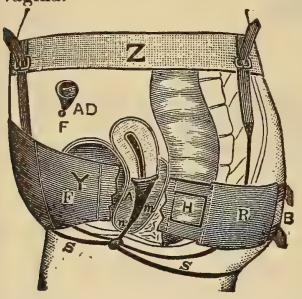
STAUFER'S

UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S). One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in diameter, the difference from one size to another being $\frac{1}{8}$ inch. The size most frequently used is $1\frac{3}{4}$ inches across the cup.

SELECTION In ordering, give exact measure around the hips, just below crest of ilium, and the width of cup on top, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE

The instrument complete, with belt Z, costs	$4.00
" " " " " Y, "	5.00

☞ Must be Returned or Paid for in TEN DAYS!

A Strange Thing!

There are about 250 medical journals published in this country which are claimed by their publishers to be the best & cheapest! This can hardly be so; but such is the claim. Some measure their merits with a foot-rule, and some pretend to weigh them.

Now let every reader take his own rule & scale, and try this: =

A. The Reporter (weekly) about 2000 pages
B. " Compendium (quarterly) " 600 "

The Reporter full of hot sparks from the anvil of medical experience =

The Compendium full of well hammered articles: Both for $6.00 a Year!

Too few of the subscribers to the Reporter take the Compendium. More ought to!!

You will get a Specimen copy if you ask for it — perhaps if you don't!

HYDROLEINE

(HYDRATED OIL)

FOR CONSUMPTION and WASTING DISEASES,

Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls equal to 120 Drops, contains:

Pure Cod Liver Oil...80 m. (drops)	Soda.....1.3 Grains.
Distilled Water.....35 "	Salicylic Acid.....1.4 "
Soluble Pancreatin.. 5 Grains.	Hyocholic Acid.....1.20 "

DOSE.—Two teaspoonfuls alone, or with twice the quantity of water to be taken thrice daily after meals.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a modicum of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in results.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph.D., F. C. S., *and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by* G. OVEREND DREWRY, M.D. *Copies of these works sent free on application.*

SOLD AT ALL DRUG STORES, AT $1.00 PER BOTTLE.

THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES, M.D.

"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

MEDICAL AND SURGICAL REPORTER,
P. O. Box 843. PHILADELPHIA.

FELLOWS'
HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The essential elements** to the Animal Organization—Potash and Lime.

The **Oxydizing Agents**—Iron and Manganese;

The **Tonics**—Quinine and Strychnine,

And the **Vitalizing Constituent**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of Mental and Nervous Affections.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars sent to Physicians on Application.

FOR SALE BY ALL DRUGGISTS.

ARTIFICIAL LEGS and ARMS

WITH RUBBER HANDS AND FEET.

MARKS' PATENTS.

Over 8,000 in actual use throughout the civilized world. The use of rubber hands and feet on artificial limbs simplifies the construction so that limbs can be worn by the crippled for many years without requiring repairs. Men engaged in every conceivable occupation operate on rubber feet or use their rubber hands to great advantage.

MR. A. A. MARKS: MAMARONECK, N. Y., Dec. 21, 1887.

DEAR SIR: Over twelve years ago I met with the misfortune of having both my legs crushed by the railroad cars, which necessitated amputation below the knees. By the advice of my surgeons I placed myself under your care for restoration. Your reputation as the one most competent in the land had so impressed me that I felt I was soon to realize the most that skill and ingenuity could devise.

I well remember how proud I was when your genius placed me in a position in which I could indulge in youthful sports, how I availed myself of every advantage, playing ball, boating, fishing, and hunting in summer, and skating in winter.

I became quite an expert on the skates and relished the applause my antics on the ice would excite. My obligations to the pair you made for me placed me in a position to feel a sense of duty to put them to the severest test and boast of my accomplishments.

For this reason I have indulged in many sports which really belong to the sound and rugged. My latest prank is that of riding a bicycle. I found the task considerable at first, but being determined, I succeeded after repeated attempts, to ride tolerably well.

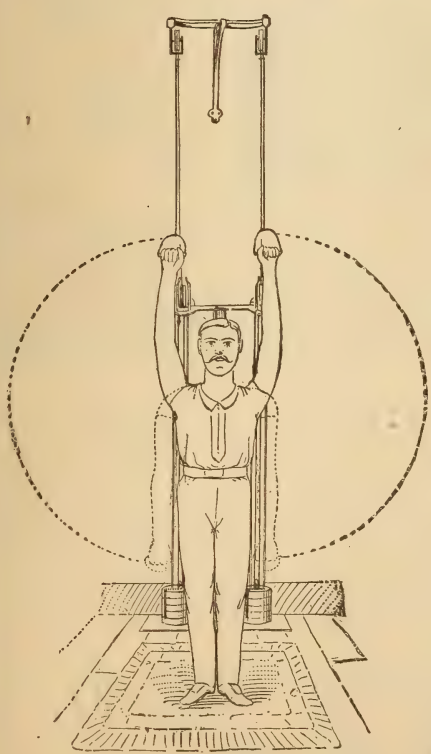
I shall only be too happy to commend your rubber feet, and will do all I can to encourage their sale. JAMES McDONALD.

By a copyright formula furnished by us on request, applicants can supply us with all the data necessary to secure fit and satisfactory results while they remain at home. One half the legs and arms furnished by us are made from measurements and profiles without our seeing the wearer. This new method is a great convenience for those living at a distance. Fit always guaranteed.

A treatise of 400 pages and 190 illustrations and nearly a thousand endorsements and testimonals sent to those needing artificial legs or arms, who will give a description of their case. The same will be sent to physicians and surgeons free of charge. Address,

A. A. MARKS, 701 BROADWAY, NEW YORK CITY.

The highest awards received at every exhibition. Endorsed by the United States Government, and commissioned by the Surgeon-General of the United States Army to supply limbs to pensioners of the United States.



THE **Medical Profession** are cordially invited to visit our **GYMNASIUM SHOWROOM** containing over **FIVE THOUSAND DOLLARS** worth of apparatus for the **advancement of physical culture.**

Our O. K. Machine No. 2

Price, $10. Sent by Express to any part of the United States or Canada. No charge for casing.

Is endorsed by all **Physicians** who have seen it. It will develop any and every **muscle** of the body.

ADAPTED TO OLD AND YOUNG, MALE AND FEMALE.

We will mail our **Manual of Physical Culture,** together with **complete catalogue, free,** on application.

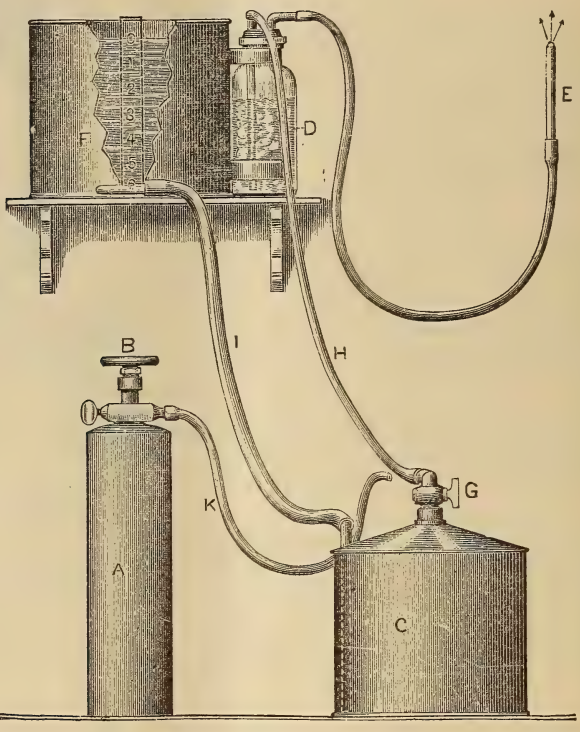
PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



☞ At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

REPORTER VACCINE VIRUS.

(HUMANIZED.)

For some time we have ceased to advertise VACCINE VIRUS, for a very good reason, viz: **We could not get what we found reliable.** Now we can, and offer our subscribers Crusts from healthy infants at

ONE DOLLAR, OR TWO DOLLARS

according to size. They are from the best source we know of, and we can recommend them.

But dealing in VACCINE VIRUS is an accommodation to our subscribers, and not a source of material profit to us; so we must have **Money sent with Order.** If crusts don't take, we will get another.

DRS. RANDOLPH & DULLES,
P. O. Box 843. PHILADELPHIA.

MARVELOUS MEMORY DISCOVERY.

Any book learned in one reading. Mind wandering cured. Speaking without notes. Wholly unlike artificial Systems. Piracy condemned by Supreme Court. Great inducements to correspondence classes.

Buckley, D.D.,** Editor of the *Christian Advocate*, **Richard Proctor,** the Scientist, **Hon. Judge Gibson, Judah P. Benjamin,** and others, sent post free by
Prof. A. LOISETTE, 237 Fifth Ave., New York

An Important Communication
TO PHYSICIANS.

Thirteen years have now elapsed since the introduction of SCOTT'S EMULSION of PURE NORWEGIAN COD LIVER OIL with HYPOPHOSPHITES of LIME and SODA, since which time its growth and development have been very large, not only in this country but in South America, Great Britain and a large part of Continental Europe, and it has, in a very large degree, supplanted the Plain Cod Liver Oil. Its success is largely due to the happy combination of all its components, making a perfect chemical union, that will not separate for years, which we believe is not true of any other Cod Liver Oil preparation.

The innumerable reports from Physicians, of the brilliant results obtained justifies the statement that in almost every case where Cod Liver Oil is indicated, Scott's Emulsion is infinitely superior.

Physicians who have never tried this Emulsion, or who have been induced to try something else in its stead, will do us the favor to send for sample, and we know they will always use it in preference to plain Cod Liver Oil or any other preparation.

We also call your attention to the following preparations:

CHERRY-MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula.)

Prepared from carefully selected German Buckthorn Bark, Juglans Bark, and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

Sent free to any address.

PRICE REDUCED.

True Salicylic Acid.

CRYSTALLIZED FROM

WINTERGREEN OIL.—ITS NATURAL SOURCE.

DR. P. W. LATHAM, Downing Professor of Medicine at Cambridge (England), lecturing on the treatment of gout and rheumatism at the Royal College of Physicians, says:

"The true Salicylic Acid obtained from the vegetable kingdom must alone be employed. If you have to give large doses, avoid giving the artificial product obtained from carbolic acid, however much it may have been dialyzed and purified. Give the acid without any alkali or base," etc.

A reprint of this exceedingly valuable paper will be sent on application.

A DESIDERATUM—not always appreciated.

The quality of medicines used in the prescription is as important a factor in the cure of disease as a correct diagnosis; and a physician violates no code, either of ethics or morals, in demanding of his druggist that which he knows to be reliable, instead of leaving to the latter to decide whose preparations he shall or shall not use.

THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES, M.D.

"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

GENUINE BLAUD'S PILLS.

These pills, which have been inserted in the new French Pharmacopœia, have been employed with the greatest success for more than fifty years by most French and foreign physicians, to cure anemia, chlorosis, and all chlorotic affections in which iron is indicated.

Here is the opinion of men most eminent in medical science, who have employed them:

"For thirty-five years, in which I have practised medicine, I have recognized the incontestable advantages of BLAUD'S PILLS over all other ferruginous preparations, and I regard them as the best anti-chlorotic."—DR. DOUBLE, *Ex-President of the Academy of Medicine.*

"Of all the ferruginous preparations, which have given good results in the treatment of chlorotic affections, BLAUD'S PILLS appear to us to deserve to hold the first rank."—*Dictionnaire universel de médecine*, Vol. II, p. 99.

These pills, prepared according to the genuine formule of the originator, by his nephew, Aug. Blaud, Pharmacist of the Faculty of Paris, are sold only in bottles of 200 pills and half bottles of 100 pills, at a cost of 5 and 3 francs ($1.00, and seventy-five cents), and never in smaller quantities. *See that his name is stamped on each pill.* **PARIS, 8 RUE PAYENNE, and at every Pharmacy.** (Beware of imitations.)

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

LITTELL'S LIVING AGE.

IN 1889 THE LIVING AGE enters upon its forty-sixth year. Approved in the outset by Judge Story, Chancellor Kent, President Adams, historians Sparks, Prescott, Ticknor, Bancroft, and many others, it has met with constant commendation and success.

A WEEKLY MAGAZINE, it gives fifty-two numbers of sixty-four pages each, or more than Three and a Quarter Thousand double-column octavo pages of reading-matter yearly. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a completeness nowhere else attempted,

The best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature, and from the pens of

The Foremost Living Writers.

The ablest and most cultivated intellects, in every department of Literature, Science, Politics, and Art, find expression in the Periodical Literature of Europe, and especially of Great Britain.

The Living Age, forming four large volumes a year, furnishes from the great and generally inaccessible mass of this literature the only compilation that, while within the reach of all, is satisfactory in the COMPLETENESS with which it embraces whatever is of immediate interest, or of solid, permanent value.

It is therefore indispensable to every one who wishes to keep pace with the events or intellectual progress of the time, or to cultivate in himself or his family general intelligence and literary taste.

OPINIONS.

"No man who understands the worth and value of this sterling publication would think of doing without it. . Nowhere else can be found such a comprehensive and perfect view of the best literature and thought of our times. . Every article is an apple of gold in a picture of silver. . It furnishes to all the means to keep themselves intelligently abreast of the time."—*Christian at Work, New York.*

"It is a *living* picture of the age on its literary side. It was never brighter, fresher, or more worthy of its wide patronage. . To glance at its table of contents is in itself an inspiration. . No man will be behind the literature of the times who reads THE LIVING AGE."—*Zion's Herald, Boston.*

"Perennial in its attractions for the intelligent reader. It is one of those few publications, weekly or monthly, which seem indispensable. . The only possible objection that could be urged to it is the immense amount of reading it gives. . There is nothing noteworthy in science, art, literature, biography, philosophy, or religion, that cannot be found in it. It is a library in itself. . Such a publication exhausts our superlatives."—*The Churchman, New York*

"Replete with all the treasures of the best current thought, the best fiction, and the best poetry of the day. . It stands unrivalled."—*The Presbyterian, Phila.*

"The more valuable to a man, the longer he takes it. He comes to feel that he cannot live without it."—*New-York Evangelist.*

"Years of acquaintance with its weekly issues have impressed us more and more with a sense of its value and importance in an age when knowledge has increased beyond all precedent, and the multiplication of publications of all sorts makes it impossible for any one to keep up with the current. By the careful and judicious work put into the editing of THE LIVING AGE, it is made possible for the busy man to know something of what is going on with ever increasing activity in the world of letters. Without such help he is lost."—*Episcopal Recorder, Philadelphia.*

"Through its pages alone it is possible to be as well informed in current literature as by the perusal of a long list of monthlies."—*Philadelphia Inquirer.*

"The readers miss very little that is important in the periodical domain."—*Boston Journal.*

"One of the few periodicals worth keeping in a library. . It maintains its leading position in spite of the multitude of aspirants for public favor."—*New-York Observer.*

"Its value can hardly be reckoned in dollars and cents. . A repository of the best thought of the best writers of our day and generation."—*Boston Commonwealth.*

"Biography, fiction, science, criticism, history, poetry, travels, whatever men are interested in, all are found here."—*The Watchman, Boston.*

"It may be truthfully and cordially said that it never offers a dry or valueless page."—*New-York Tribune.*

"It is edited with great skill and care, and its weekly appearance gives it certain advantages over its monthly rivals."—*Albany Argus.*

"It saves much labor for busy people who wish to keep themselves well informed upon the questions of the day."—*The Advance, Chicago.*

"Still holds its foremost place."—*Troy Times.*

"Continually increases in value."—*Every Evening, Wilmington, Del.*

"It furnishes a complete compilation of an indispensable literature."—*Chicago Evening Journal.*

"Recent numbers show the wide range of thought and careful discrimination of editorship which have so long distinguished it. . For the amount of reading-matter contained the subscription is extremely low."—*Christian Advocate, Nashville.*

"It enables its readers to keep fully abreast of the best thought and literature of civilization."—*Christian Advocate, Pittsburgh.*

"In this weekly magazine the reader finds all that is worth knowing in the realm of current literature. . As a weekly record of the literary and scientific progress of the age it is indispensable."—*Canada Presbyterian, Toronto.*

"Rarely, indeed, will the seeker of what is most noteworthy in periodical literature be disappointed if he turns to THE LIVING AGE. . Coming once a week, it gives, while yet fresh, the productions of the foremost writers of the day. . It is a reflection, as its name implies, of the best life and thought of the age, and as such is indispensable to all who would keep abreast of our manifold progress. . It is absolutely without a rival."—*Montreal Gazette.*

PUBLISHED WEEKLY at $8.00 a year, *free of postage.*

☞ TO NEW SUBSCRIBERS for the year 1889, remitting before Jan. 1, the weekly numbers of 1888 issued after the receipt of their subscriptions, will be sent *gratis.*

CLUB PRICES FOR THE BEST HOME AND FOREIGN LITERATURE.

["Possessed of LITTELL'S LIVING AGE, and of one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"—*Philadelphia Evening Bulletin.*]

For $10.50, THE LIVING AGE and any one of the *four-dollar* monthly magazines (or *Harper's Weekly* or *Bazar*) will be sent for a year, with postage prepaid on both; or, for $9.50, THE LIVING AGE and the *St. Nicholas* or *Scribner's Magazine*, postpaid.

ADDRESS **LITTELL & CO., 31 Bedford St., Boston.**

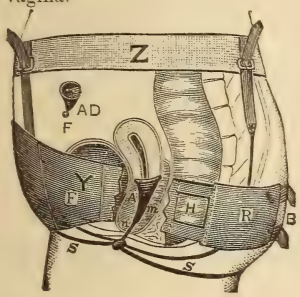
STAUFER'S

UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S). One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in diameter, the difference from one size to another being $\frac{1}{8}$ inch. The size most frequently used is $1\frac{3}{4}$ inches across the cup.

SELECTION In ordering, give exact measure around the hips, just below crest of ilium, and the width of cup on top, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE The instrument complete, with belt Z, costs $4.00

PRUNO-PHOSPHORATED SYRUP.

(SYRUP PRUNO-PHOSPHOR.)

A Tonic of peculiar excellence, used with success in the treatment of Pulmonary Tuberculosis and kindred ailments.

Containing **PRUNUS VIRGINIANA,** with **Lime, Potash, Soda, Iron, Manganese, Quinine, Strychnine,** making a preparation which proves to be of considerable utility.

Pruno-Phosphorated Syrup is a powerful tonic to the nervous system, aiding the digestion and the functions of assimilation at the same time.

It supplies the necessary phosphates to give energy, and thus prevents the attacks of disease.

Especially in America it is necessary to supply in some convenient form a nerve tonic, as business and professional men are worked at high pressure, and exhaust their latent energy. If the brain power is impaired from any cause, digestion immediately suffers, and the whole body, in time, is enfeebled.

Pruno-Phosphorated Syrup contains besides **PRUNUS VIRGINIANA** and the phosphorous compounds, the nerve invigorating drug strychnia—in combination with the blood-enriching iron—all the elements to produce good digestion, pure blood, and as a result, mental activity, uniting with a tonic power the property of calming irritation and diminishing nervous excitability.

The especial recognition which this preparation has received over other combinations of **Iron** and **Quinine,** is attributable to the discovery that it neither causes **Headache** nor interferes with **Digestion.** In cases where even moderate doses of **Quinine** produce head symptoms of such severity that the desired benefit of the alkaloid cannot be obtained, **Pruno-Phosphorated Syrup** may be freely administered without any disagreeable result.

Patients intolerant of **Iron** in every other form can readily assimilate **Pruno-Phosphorated Syrup.**

DOSE.—The *tonic dose,* is one fluid drachm; *stimulant and tonic dose* combined, two fluid drachms.

Descriptive Circular furnished to Physicians on application.

Physicians desirous of giving Pruno-Phosphorated Syrup a trial, and will pay express charges, will be furnished with one regular size bottle free.

UNION PHARMACEUTICAL COMPANY,

18 & 20 PLATT STREET

NEW YORK.

REED & CARNRICK'S SOLUBLE FOOD.

In the *Journal* of August 2, 1888, was published an analysis of Carnrick's Soluble Food, copied from, and credited to, the Report of the New Jersey Dairy Commissioner.

Dr. Newton, the Commissioner, has forwarded to us a circular, recently issued, bearing upon the same subject, to which it is necessary we should, in common honesty, give equal publicity to that given the first quotation. The circular is as follows:

STATE OF NEW JERSEY,
OFFICE OF THE DAIRY COMMISSIONER,
PATERSON, N. J., Sept. 19, 1888.

IN the report of this department to the legislature for the year 1887, an article by Prof. A. R. Leeds, entitled "Foods for Infants and Invalids," was published.

Messrs. Reed & Carnrick have, in a communication to this office, taken exception to some of the statements therein made, claiming that the amount and character of the ingredients of their food preparations were misrepresented. In order that these gentlemen might receive full justice, I offered to have the analytical work revised by a chemist of reputation, who had never had any business or professional relations with either the State or Reed & Carnrick; and it was also stated that the results of this series of analyses would be published by this office.

Accordingly, Prof. Elwyn Waller, Professor of Analytical Chemistry at the School of Mines, Columbia College, New York, was requested to purchase a package of "Carnrick's Soluble Food" in the open market, analyze the contents thereof, and report the results to me. Below is a copy of his report.

"I examined a sample of 'Carnrick's Soluble Food' (purchased by myself from Eimer & Amend). I find that 38.26 per cent. of the albuminoids which it contains are in the soluble form.

"The sample also gave readily the biuret reaction for peptones. I failed to detet in the food, when moistened, any of the 'hard, unchanged particles of casein' which it has been asserted that it contains.

"My results lead to the conclusion that the casein in the preparation has been partially rendered soluble by the action of the digestive ferment as claimed by the manufacturers."

(Signed) ELWYN WALLER, PH.D.

I append herewith a letter on this subject that I have received from Prof. A. A. Breneman, S. B., formerly Professor of Chemistry at Cornell University, now analytical chemist at 97 Water Street, New York.

WM. K. NEWTON, *Commissioner.*

NEW YORK, September 18, 1888.

DR. W. K. NEWTON, *State Dairy Commissioner of New Jersey.*

Dear Sir: The report of your department for the year 1887 refers to certain preparations made by Reed & Carnrick, of New York, in a way which, from my knowledge of their work, seems to do them injustice.

The statements to which I especially refer are:

(1) That the milk solids in the preparation known as Carnrick's Soluble Food contains merely the dried casein of the original milk, neither changed nor modified by any process of digestion.

(2) That the analysis of this food given in the Report of the State Board of Health of New Jersey for the year 1885 correctly represents it, giving as it does only 10.25 per cent. of total albuminoids.

(3) In the analysis of the preparation known as Liquid Peptonoids (New Jersey State Dairy Report, 1887) the proportions of alcohol and albuminoids there given are made the basis of comments which are extravagant in language, and unnecessarily severe.

On February 20, 1888, I made, at the request of Reed & Carnrick, a test of the peptonized milk received in good condition from their factory. Of the albuminoids of the original milk 46.6 per cent. were found to be rendered soluble (that is, no longer precipitable by boiling or by acids). Through the process of digestion such soluble nitrogenous matters must, under the circumstances, consist of peptones, albumoses and caseoses, products of the modification of the original albuminoids of the milk by digestion.

Having made many analyses of this food during the past three years, I have never found the proportion of albuminoids to run below 16.5 per cent. as determined by combustion with soda lime. The average of fifteen analyses, made since January 1, 1887, shows 18.96 per cent. of albuminoids. These results also agree well with the analyses of the same food made by Stutzer and other well-known chemists.

As to the liquid peptonoids, the proportion of albuminoids is limited only by the quantity which can be kept unchanged in solution. 16 per cent. of alcohol is necessary to prevent decomposition of the albuminoids, and no quantity greater than three per cent. of these can be held in solution in this liquid. Many attempts have been made to accomplish a better result, but in all cases the excess of albuminoids was deposited after a time, or (with reduced proportion of alcohol) decomposition of the albuminoids occurred.

Very respectfully,

A. A. BRENEMAN,

Analytical and Consulting Chemist.

SUCCUS ALTERANS

(McDADE.)

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica Lappa Minor, Phytolacca Decandra, Smilax Sarsaparilla, and Xanthoxylum Carolinianum, as collected by Dr. Geo. W. McDade, exclusively for Eli Lilly & Co., and endorsed by Dr. J. Marion Sims.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood* and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree; is endorsed by the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides, and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS is giving satisfactory results in treatment of *Chronic Rheumatism*, and can be used with confidence.

SUCCUS ALTERANS may be given for any length of time, without injury to the patient.

SUCCUS ALTERANS is put up in pint round amber bottles, and *never in bulk.*

PHYSICIANS who have not received Dr. McDade's latest publication, the Monographia Syphilitica, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. Goodwillie, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

ELIXIR PURGANS.

Elixir Purgans (Lilly) reliably stimulates the dormant liver without undue irritation, and has gentle yet positive effect upon the alimentary tract. In Habitual Constipation, so common in Women and Children, it will be found particularly useful. Its endorsement at Bellevue and many other prominent hospitals East and West, as well as its employment in general practice by the most eminent medical men, confirms the experience of years in its use.

Each Teaspoonful Represents	
Rhamnus Purshiana, -	10 grs.
Euonymus Atropur., - -	8 grs.
Cassia Acutifolia (Purif.)	10 grs.
Iris Versicolor, - - -	4 grs.
Hyoscyamus Niger, -	2 grs.
Aromatics, etc.	

IN PRESCRIBING, PLEASE BE CAREFUL TO WRITE

ELIXIR PURGANS (LILLY),

THAT OTHER PREPARATIONS MAY NOT BE SUBSTITUTED.

HIGHLY RECOMMENDED.

We take pleasure in endorsing the Elixir Purgans (Lilly) as prepared from the above formula, for in it we find a near approach to positive *perfection* in the form of a *Liquid Cathartic*, and, from our experience with the preparation, can highly recommend it to the profession.

SUPPLIED BY ALL DRUGGISTS.

PRESIDENT CLEVELAND'S PRIZE

for the three best babies at the Aurora County Fair, in 1887, was given to these triplets, Mollie, Ida, and Ray, children of Mrs. A. K. Dart, Hamburgh, N. Y. She writes: "Last August the little ones became very sick, and as I could get no other food that would agree with them, I commenced the use of Lactated Food. It helped them immediately, and they were soon as well as ever, and I consider it very largely due to the Food that they are now so well.

LACTATED FOOD

SUGAR OF MILK THE BASIS. NO CANE SUGAR.
FREE FROM STARCH. HIGHEST VALUE IN NUTRIENTS.
EASILY ASSIMILATED.

A regular size package of Lactated Food will be sent, charges paid, to any Physician who is not yet acquainted with its merits. Correspondence solicited.

WELLS, RICHARDSON & CO., Burlington, Vt. and Montreal, P. Q.

The Curd of Cow's Milk Made as Soft and Digestible as that of Woman's Milk.

"From experiments which I have recently made — and my thanks are due to Prof. Salisbury of the Woman's Medical College, for assistance — it seems that the claim which is made by the advocates of the MELLIN'S FOOD is true, and that the addition of this food to cow's milk does cause it to break up in very small, flaky curds."— *Dr. Chas. Warrington Earle, Professor of Diseases of Children, Woman's Medical College, Professor of Obstetrics, College Physicians and Surgeons, Chicago, in his paper on Infant Feeding, before the American Medical Association, May, 1888.*

Any physician having a case in which he desires to test MELLIN'S FOOD can obtain a sample sufficient for trial, free of all expense, by application.

Doliber-Goodale Co., Boston, Mass.

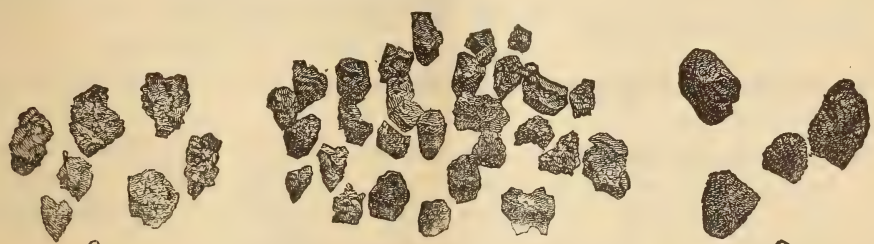
Buffalo Lithia Water

In the TREATMENT OF URINARY DEPOSIT.

Case of Dr. B. J. WEISTLING, of Middleton, Pa., stated by himself.

"Experience in its use in **STONE in the BLADDER** in my own person enables me to attest the efficacy of the **BUFFALO LITHIA WATER** in this painful malady. After having been long subjected to sufferings, the intensity of which cannot be described, I have, under the influence of this Water, passed an ounce of **CALCULI (URIC ACID)**, some of which weighed as much as four grains, affording inexpressible relief and leaving me in a condition of comparative ease and comfort.

"On one occasion I passed thirty-five **CALCULI** in forty-eight hours. The appearance of these **CALCULOUS NUCLEI** indicates unmistakably, I think, that they were all *component particles of one large* **CALCULUS** *destroyed by the action of the Water, by means of solution and disintegration.* At my advanced period of life (I am seventy-seven years and six months of age), and in my feeble general health, a surgical operation was not to be thought of, and the Water seems to have accomplished all that such an operation, if successful, could have done."



[The above plate is from a photograph, and represents the exact size and shape of some of the Calculi passed by Dr. Weistling. They were preserved by his son, Dr. J. Weir Weistling.]

Case stated by Dr. G. HALSTED BOYLAND, late Professor of Surgery, Baltimore Medical College, Member American Medical Association.

"The case of Mr. C., which came under my observation as Resident Physician at the Springs during the season of 1884, affords undoubted evidence that Buffalo Lithia Water is a **SOLVENT** *for Urinary Deposit*, commonly known as **STONE in the BLADDER.** He was operated upon for **STONE,** the operation affording but partial and temporary relief. A year afterward he visited the **BUFFALO LITHIA SPRINGS,** at the same time passing small quantities of a *Urinary Deposit,* of the **TRIPLE PHOSPHATE of AMMONIA** and **MAGNESIA VARIETY,** and his sufferings such as required that he should be kept constantly under the influence of opiates. In some eight weeks the solvent properties of the Water *were evident in the diminished consistency of the deposit, the increased quantity discharged, and by its change from Concrete Lumps to fine Sand,* which he discharged to the amount of *Four Ounces.* After a time, however, the quantity gradually diminished, and finally ceased, and he left the Springs *with the deposit dissolved* and *washed out of the system,* and the *Diathesis fons et origi morbi* altered. There had been a disappearance of the attending distressing symptoms, and great improvement in his general condition."

Dr. MARTIN L. JAMES, of Richmond, Va., Professor of Materia Medica and Therapeutics, Medical Society of Virginia.

[Proceedings of the Richmond, Virginia, Academy of Medicine, December 16, 1880.]

"The President of the Academy, Dr. M. L. James, reported three cases of marked **URIC ACID DIATHESIS** successfully treated by the Water of Spring No. 2 of the **BUFFALO LITHIA SPRINGS** of Virginia. In one of these patients there were, as a result of this Diathesis, **SANDY DEPOSITS** in the *Urine, Inflammation of the Kidneys, Irritability of the Bladder, and Hæmaturia,* and, finally, the passage of a **CALCULUS** of the size of a cherry, formed on a blood-clot as a nucleus. In another case there were frequent attacks of **NEPHRITIC COLIC,** attended by **SANDY DEPOSITIONS** in the urine. After the free use of this Water in these cases, no further manifestations of the disorder occurred."

Dr. HENRY M. WILSON, of Baltimore, ex-President Medical and Chirurgical Faculty of Maryland.

"My experience in the use of the **BUFFALO LITHIA WATER** has not been large, *but it is of such a positive character that I do not hesitate to express my preference for it, as a* **DIURETIC** in **URINARY CALCULI,** *over all other waters that I have ever used.*"

Water in cases of one dozen half-gallon bottles, $5 per case, at the Springs.

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

PRUNO-PHOSPHORATED SYRUP.

(SYRUP PRUNO-PHOSPHOR.)

A Tonic of peculiar excellence, used with success in the treatment of Pulmonary Tuberculosis and kindred ailments.

Containing **PRUNUS VIRGINIANA,** with **Lime, Potash, Soda, Iron, Manganese, Quinine, Strychnine,** making a preparation which proves to be of considerable utility.

Pruno-Phosphorated Syrup is a powerful tonic to the nervous system, aiding the digestion and the functions of assimilation at the same time.

It supplies the necessary phosphates to give energy, and thus prevents the attacks of disease.

Especially in America it is necessary to supply in some convenient form a nerve tonic, as business and professional men are worked at high pressure, and exhaust their latent energy. If the brain power is impaired from any cause, digestion immediately suffers, and the whole body, in time, is enfeebled.

Pruno-Phosphorated Syrup contains besides **PRUNUS VIRGINIANA** and the phosphorous compounds, the nerve invigorating drug strychnia—in combination with the blood-enriching iron—all the elements to produce good digestion, pure blood, and as a result, mental activity, uniting with a tonic power the property of calming irritation and diminishing nervous excitability.

The especial recognition which this preparation has received over other combinations of **Iron** and **Quinine,** is attributable to the discovery that it neither causes **Headache** nor interferes with **Digestion.** In cases where even moderate doses of **Quinine** produce head symptoms of such severity that the desired benefit of the alkaloid cannot be obtained, **Pruno-Phosphorated Syrup** may be freely administered without any disagreeable result.

Patients intolerant of **Iron** in every other form can readily assimilate **Pruno-Phosphorated Syrup.**

DOSE.—The *tonic dose*, is one fluid drachm; *stimulant and tonic dose* combined, two fluid drachms.

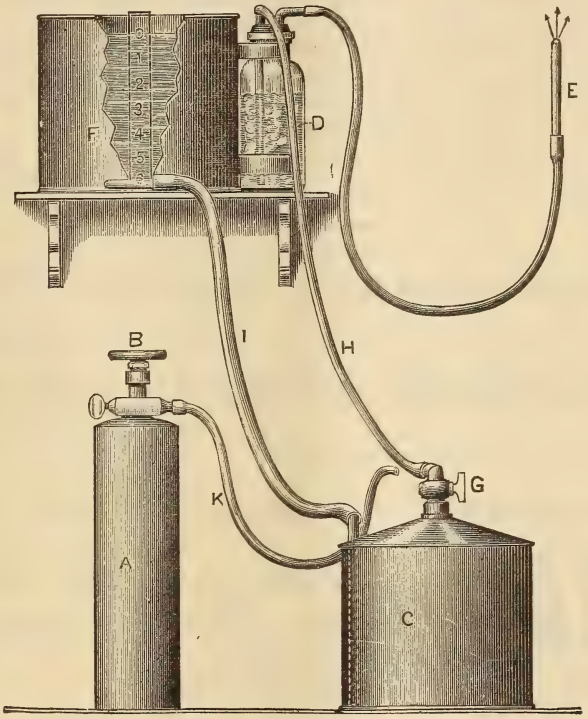
PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

An Important Communication
TO PHYSICIANS.

Thirteen years have now elapsed since the introduction of SCOTT'S EMULSION of PURE NORWEGIAN COD LIVER OIL with HYPOPHOSPHITES of LIME and SODA, since which time its growth and development have been very large, not only in this country but in South America, Great Britain and a large part of Continental Europe, and it has, in a very large degree, supplanted the Plain Cod Liver Oil. Its success is largely due to the happy combination of all its components, making a perfect chemical union, that will not separate for years, which we believe is not true of any other Cod Liver Oil preparation.

The innumerable reports from Physicians, of the brilliant results obtained justifies the statement that in almost every case where Cod Liver Oil is indicated, Scott's Emulsion is infinitely superior.

Physicians who have never tried this Emulsion, or who have been induced to try something else in its stead, will do us the favor to send for sample, and we know they will always use it in preference to plain Cod Liver Oil or any other preparation.

We also call your attention to the following preparations:

CHERRY-MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula.)

Prepared from carefully selected German Buckthorn Bark, Juglans Bark, and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Ave., New York.

FOR THE ILL EFFECTS ATTENDING SUMMER HEAT

«NERVOUS HEADACHES»

INSOMNIA, MIGRAINE, and where your patients are tired, both mentally and physically, due to excessive heat, they will be greatly relieved by a dose or two of

EFFERVESCENT

BROMO

(WARNER & CO.)

SODA

℞ Bromide Sodium, grs. xxx.
Caffein, - gr. i.

In each heaping teaspoonful, to be taken in half a glassful of water and drank while effervescing, forming a delightfully cool and refreshing draught, to be repeated in half an hour if necessary.

☞ Please specify (Bromo-Soda) WARNER & Co., and get the full therapeutic effect, thereby avoiding the substitution of other "Bromos," the composition of which is not known.

Wm. R. Warner & Co.

Originators and Manufacturers of Effervescent Bromo-Soda, Bromo-Potash, and a full line of Effervescent Salts.

INGLUVIN! VENTRICULUS CALLOSUS GALLINACEUS A powder, prescribed in the same manner doses, and combinations as Pepsin, used in all cases where Pepsin is required with superior advantage. A specific in vomiting in gestation, in doses of 10 to 20 grs.

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterated.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: McARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

Mention this Journal. McARTHUR HYPOPHOSPHITE CO., BOSTON, MASS

MARKS' PATENTS.

Over 8,000 in actual use throughout the civilized world. The use of rubber hands and feet on artificial limbs simplifies the construction so that limbs can be worn by the crippled for many years without requiring repairs. Men engaged in every conceivable occupation operate on rubber feet or use their rubber hands to great advantage.

MR. A. A. MARKS: MAMARONECK, N. Y., Dec. 21, 1887.

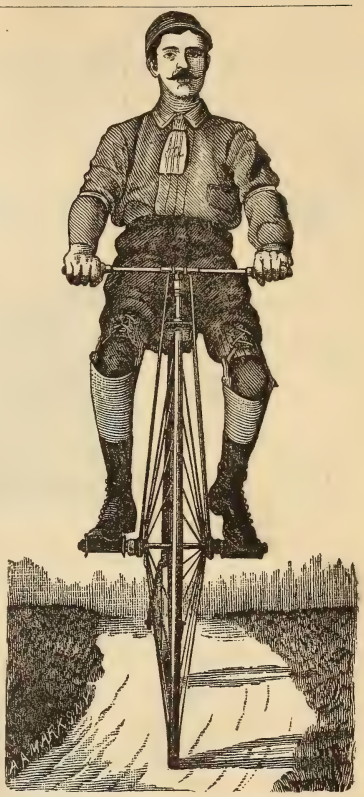
DEAR SIR: Over twelve years ago I met with the misfortune of having both my legs crushed by the railroad cars, which necessitated amputation below the knees. By the advice of my surgeons I placed myself under your care for restoration. Your reputation as the one most competent in the land had so impressed me that I felt I was soon to realize the most that skill and ingenuity could devise.

I well remember how proud I was when your genius placed me in a position in which I could indulge in youthful sports, how I availed myself of every advantage, playing ball, boating, fishing, and hunting in summer, and skating in winter.

I became quite an expert on the skates and relished the applause my antics on the ice would excite. My obligations to the pair you made for me placed me in a position to feel a sense of duty to put them to the severest test and boast of my accomplishments.

For this reason I have indulged in many sports which really belong to the sound and rugged. My latest prank is that of riding a bicycle. I found the task considerable at first, but being determined, I succeeded after repeated attempts, to ride tolerably well.

I shall only be too happy to commend your rubber feet, and will do all I can to encourage their sale. JAMES McDONALD.

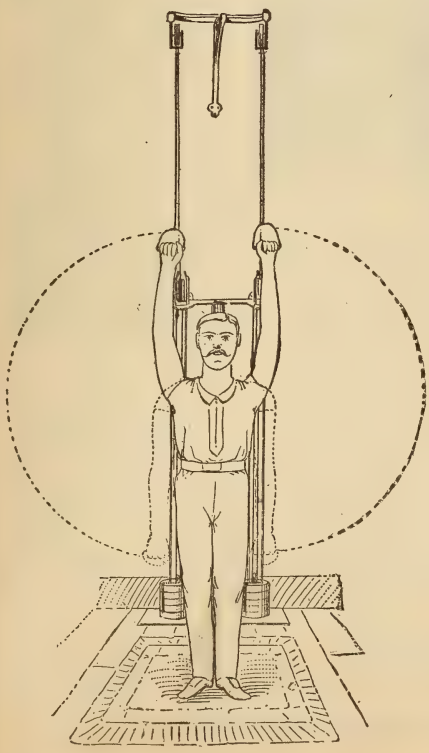


By a copyright formula furnished by us on request, applicants can supply us with all the data necessary to secure fit and satisfactory results while they remain at home. One half the legs and arms furnished by us are made from measurements and profiles without our seeing the wearer. This new method is a great convenience for those living at a distance. Fit always guaranteed.

A treatise of 400 pages and 190 illustrations and nearly a thousand endorsements and testimonals sent to those needing artificial legs or arms, who will give a description of their case. The same will be sent to physicians and surgeons free of charge. Address,

A. A. MARKS, 701 BROADWAY, NEW YORK CITY.

The highest awards received at every exhibition. Endorsed by the United States Government, and commissioned by the Surgeon-General of the United States Army to supply limbs to pensioners of the United States.



THE **Medical Profession** are cordially invited to visit our **GYMNASIUM SHOWROOM** containing over **FIVE THOUSAND DOLLARS** worth of apparatus for the **advancement of physical culture.**

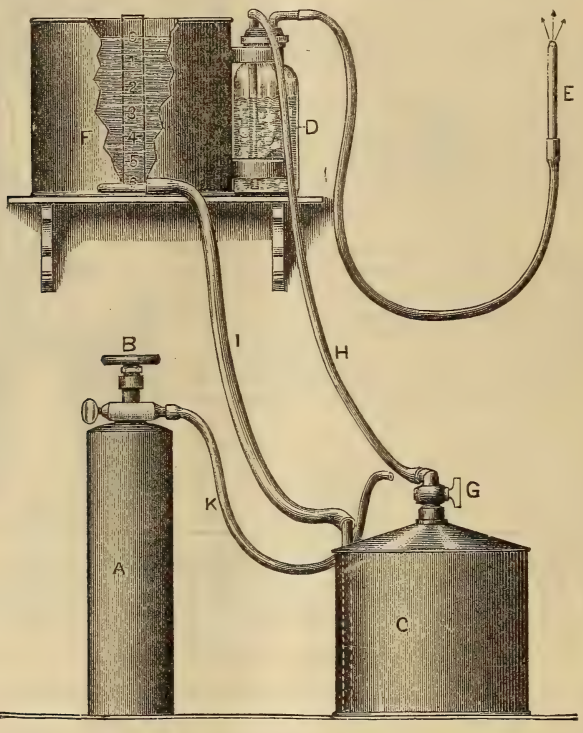
SPORTING AND ATHLETIC GOODS OF EVERY DESCRIPTION.

PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

Buckley, D.D.,** Editor of the *Christian Advocate,* **Richard Proctor,** the Scientist, **Hons. Judge Gibson, Judah P. Benjamin,** and others, sent post free by
Prof. A. LOISETTE, 237 Fifth Ave., New York.

An Important Communication
TO PHYSICIANS.

Thirteen years have now elapsed since the introduction of SCOTT'S EMULSION of PURE NORWEGIAN COD LIVER OIL with HYPOPHOSPHITES of LIME and SODA, since which time its growth and development have been very large, not only in this country but in South America, Great Britain and a large part of Continental Europe, and it has, in a very large degree, supplanted the Plain Cod Liver Oil. Its success is largely due to the happy combination of all its components, making a perfect chemical union, that will not separate for years, which we believe is not true of any other Cod Liver Oil preparation.

The innumerable reports from Physicians, of the brilliant results obtained justifies the statement that in almost every case where Cod Liver Oil is indicated, Scott's Emulsion is infinitely superior.

Physicians who have never tried this Emulsion, or who have been induced to try something else in its stead, will do us the favor to send for sample, and we know they will always use it in preference to plain Cod Liver Oil or any other preparation.

We also call your attention to the following preparations:

CHERRY-MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula.)

Prepared from carefully selected German Buckthorn Bark, Juglans Bark, and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

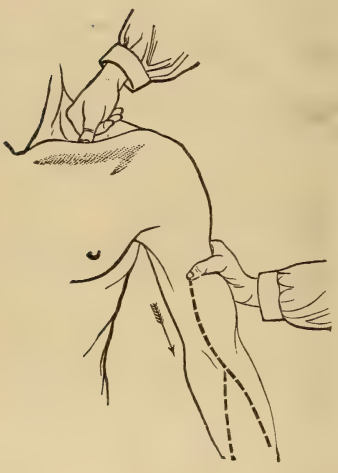
THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES, M.D.



"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

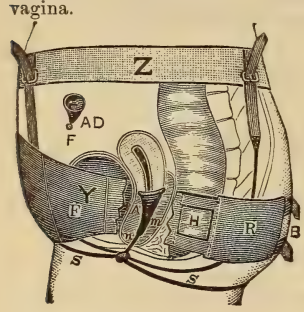
STAUFER'S

UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S). One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in diameter, the difference from one size to another being $\frac{1}{8}$ inch. The size most frequently used is $1\frac{3}{4}$ inches across the cup.

SELECTION In ordering, give exact measure around the hips, just below crest of ilium, and the width of cup on top, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE

The instrument complete, with belt Z, costs	$4.00
" " " " " Y, "	5.00

Four Books Learned in One Reading.

A Year's Work Done in Ten Days.

[From the Chaplain of Exeter College, and Houghton Syriac Prizeman, Oxford.]

COLL. EXON. OXON., Sept., 1888.

DEAR SIR: In April, 1885, while thinking of taking orders in September, I suddenly received notice that my ordination examination would be held in a fortnight. I had only *ten* (10) days in which to prepare for the Exam. I should recommend a *year's* preparation in the case of anyone so utterly unprepared as I was; but your *System had so strengthened my natural memory*, that I was able to remember and give the gist of any *book after reading it once.* I therefore *read* Lightfoot, Proctor, Harold Browne, Mosheim, &c., &c., *once*, and was *successful* in *every one* of the *nine* papers. The present Bishop of Edinburg knows the facts.

Faithfully yours,
[REV.] JAMES MIDDLETON MACDONALD, [M.A.]

To Prof. A. Loisette, 237 Fifth Ave., New York.

Perfectly taught by correspondence. Send for prospectus.

COLDEN'S LIQUID BEEF TONIC.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in the Treatment of all Cases of Debility.

☞ ESTABLISHED 15 YEARS. ☞ ENDORSED BY SCORES OF PHYSICIANS. ☞ BEWARE OF IMITATIONS.

☞ ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS.

COLDEN'S LIQUID BEEF TONIC consists of the Extract of Beef (by Baron Liebig's process), spirit rendered non-injurious to the most delicate stomach by extraction of Fusel Oil, Soluble Citrate of Iron, Cinchona, Gentian, and simple aromatics. An official analysis of this preparation by the eminent chemist, ARTHUR HILL HASSALL, M.D., F.R.S., and an endorsement of by Sir ERASMUS WILSON, F.R.S., is printed on the label of each bottle.

In the treatment of all cases of Debility, Convalescence from severe illness, Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Lack of Nerve Tone, and of the Alcohol and Opium Habits, and all maladies requiring a Tonic Nutrient, it is superior to all other preparations.

It acts directly on the sentient gastric nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement, an appetite.—By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of SOLUBLE CITRATE OF IRON, and which is designated on the label WITH IRON, "No. 1;" while the same preparation, WITHOUT IRON, is designated on the label as "No. 2."

☞ *I will, upon application, send a sample bottle of* COLDEN'S LIQUID BEEF TONIC *to any physician in regular standing. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation physicians should be particular to mention* "COLDEN'S," *viz.*, "EXT. CARNIS FL. COMP. (COLDEN)." *It is put up in pint bottles, and* CAN BE HAD OF WHOLESALE AND RETAIL DRUGGISTS GENERALLY THROUGHOUT THE UNITED STATES.

C. N. CRITTENTON, Sole Agent, 115 Fulton Street, New York.

GLENN'S SULPHUR SOAP.

All physicians know the great value of the local use of Sulphur in the TREATMENT OF DISEASES OF THE SKIN. GLENN'S SULPHUR SOAP is the ORIGINAL and BEST combination of its kind, and the one now generally used. For sale by all Druggists at 25 cents a cake, or three cakes for 60 cents. Beware of counterfeits.

CONSTANTINE'S PINE TAR SOAP.

BY FAR THE BEST TAR SOAP MADE. Has been on trial among physicians for very many years as a toilet soap and healing agent, and its superior virtues have been unanimously conceded in ALL CASES WHERE THE USE OF TAR IS INDICATED.

Unsolicited expressions of its excellence have been received from the Medical Faculty generally. None genuine unless stamped "A. A. Constantine's Persian Healing Pine Tar Soap." For sale by all Druggists.

Wholesale Depot, C. N. CRITTENTON, 115 Fulton Street, New York.

Please mention this Journal. ☞ Samples of above Soaps SENT FREE on application to any physician enclosing card.

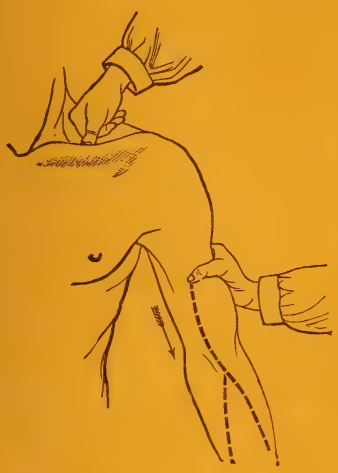
THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES, M.D.



"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

Sent on receipt of 75 Cents.

COMPRESSED TABLETS.

WE ask the attention of Physicians to the annexed list of recent additions of Compressed Tablets, as we think all of them are well deserving the careful attention of practitioners. We would be pleased to send to any physician, circular matter, compiled with great care and accuracy, giving therapeutic value and results in a concise form, that we are confident will be of interest, and possibly of advantage, to medical men who have not yet had access to the foreign and home authorities from which we have culled the information we give.

Acid Boracic, ... 5 grs.
Acetanilide, ... 3 and 5 "
Antifebrin, ... 3 " 5 "
Antipyrine, ... 3, 5 " 10 "
Blaud's
Ferri. Sulph. Exsic., 2 grs., Potass. Carb., 1 4-5 grs., Sacch. Alb., 1⅔ grs.
Iodol. . . . . ½, 1, 2, 3, and 5 grs.
Manganese Binoxide, ... 1 " 2 "
Opium, Camphor and Carb. Ammon., Opium Denarcot. ½ gr., Camphor, 2 grs., Ammon. Carb., 2½ grs.
Quinia Tannate, and Chocolate 1 grain, Quiniæ Tannat. 1 gr., Ext. Cacao, 9 grs.
Quinia Tannate and Chocolate, 2½ grs., Quiniæ Tannat. 2½ grs., Ext. Cacao. 7½ grs.
Salol, ... 2½ and 5 grs.
Sodium Succinate, ... 2 " 5 "
Thalline Sulphate, ... 2, 3 " 5 "
Trinitrin (Nitro-Glycerin), 1-20, 1-25, 1-33, 1-50, 1-100, and 1-200 gr.
Terpin Hydrate, ... 2, 3 and 5 grs.

ANTISEPTIC TABLETS.

7.7 Hydrarg. Chlor. Corros., 7.3 Ammonium Chloride.

More than six months since, we sent a circular to the drug trade, stating that we had discontinued the manufacture of the Antiseptic Tablets introduced by us several years since at the suggestion of Dr. Charles Meigs Wilson, of this city. We have, however, received so many letters from physicians urging us to resume the manufacture, insisting that the Tablets prepared by us dissolved more readily and were more satisfactory than any substitute they had been able to procure, that we feel we could not ignore such persistent demands from our medical friends who have found our tablets an absolute necessity. We have therefore concluded to again prepare them, in a building entirely separate from our main establishment, with appliances and admirably devised protection by means of improved respirators, that will completely overcome any harmful effects to those engaged in their manufacture.

Druggists and physicians will be glad to learn that the Tablets as now prepared are perfectly white and free from the coloring-matter that we formerly added. This was done to lessen the danger of their being taken, or used in mistake; to guard against any such possibility, each Tablet, as now made, has the word "POISON" stamped upon it.

JOHN WYETH & BROTHER,

CHEMISTS, PHILADELPHIA.

ARTIFICIAL LEGS and ARMS

WITH RUBBER HANDS AND FEET.

MARKS' PATENTS.

Over 8,000 in actual use throughout the civilized world, The use of rubber hands and feet on artificial limbs simplifies the construction so that limbs can be worn by the crippled for many years without requiring repairs. Men engaged in every conceivable occupation operate on rubber feet or use their rubber hands to great advantage.

MR. A. A. MARKS: MAMARONECK, N. Y., Dec. 21, 1887.

DEAR SIR: Over twelve years ago I met with the misfortune of having both my legs crushed by the railroad cars, which necessitated amputation below the knees. By the advice of my surgeons I placed myself under your care for restoration. Your reputation as the one most competent in the land had so impressed me that I felt I was soon to realize the most that skill and ingenuity could devise.

I well remember how proud I was when your genius placed me in a position in which I could indulge in youthful sports, how I availed myself of every advantage, playing ball, boating, fishing, and hunting in summer, and skating in winter.

I became quite an expert on the skates and relished the applause my antics on the ice would excite. My obligations to the pair you made for me placed me in a position to feel a sense of duty to put them to the severest test and boast of my accomplishments.

For this reason I have indulged in many sports which really belong to the sound and rugged. My latest prank is that of riding a bicycle. I found the task considerable at first, but being determined, I succeeded after repeated attempts, to ride tolerably well.

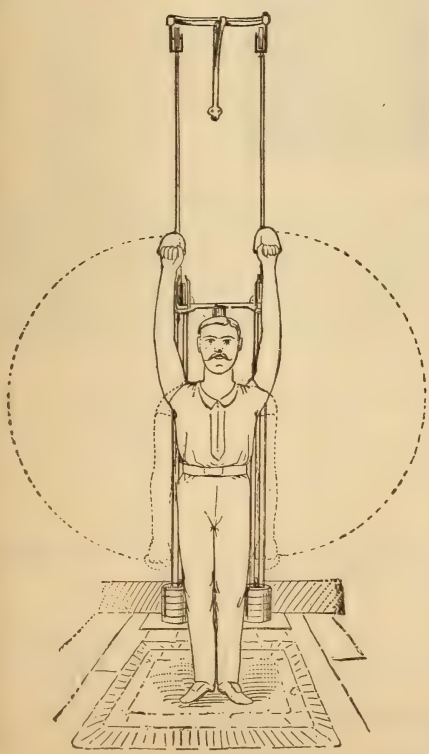
I shall only be too happy to commend your rubber feet, and will do all I can to encourage their sale. JAMES McDONALD.

By a copyright formula furnished by us on request, applicants can supply us with all the data necessary to secure fit and satisfactory results while they remain at home. One half the legs and arms furnished by us are made from measurements and profiles without our seeing the wearer. This new method is a great convenience for those living at a distance. Fit always guaranteed.

A treatise of 400 pages and 190 illustrations and nearly a thousand endorsements and testimonals sent to those needing artificial legs or arms, who will give a description of their case. The same will be sent to physicians and surgeons free of charge. Address,

A. A. MARKS, 701 BROADWAY, NEW YORK CITY.

The highest awards received at every exhibition. Endorsed by the United States Government, and commissioned by the Surgeon-General of the United States Army to supply limbs to pensioners of the United States.



THE **Medical Profession** are cordially invited to visit our **GYMNASIUM SHOWROOM** containing over **FIVE THOUSAND DOLLARS** worth of apparatus for the **advancement of physical culture.**

Our O. K. Machine No. 2

Price, $10. Sent by Express to any part of the United States or Canada. No charge for casing.

Is endorsed by all **Physicians** who have seen it. It will develop any and every **muscle** of the body.

ADAPTED TO OLD AND YOUNG, MALE AND FEMALE.

We will mail our **Manual of Physical Culture,** together with **complete catalogue, free,** on application.

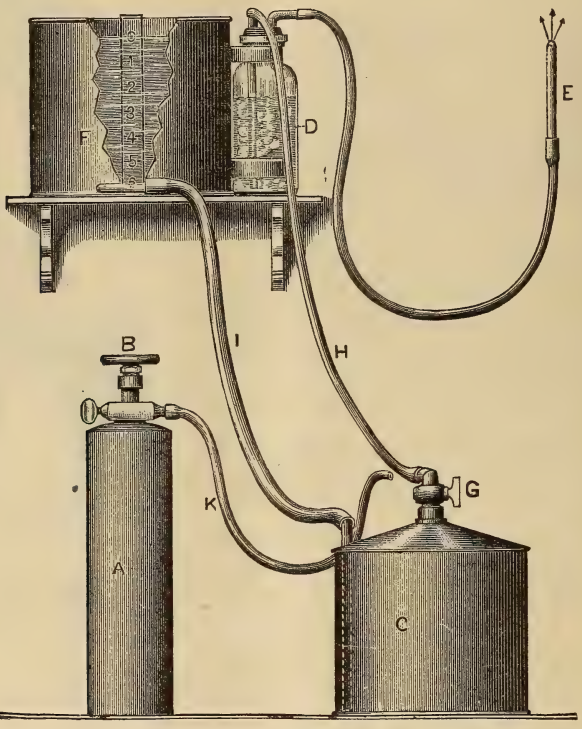
PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

An Important Communication
TO PHYSICIANS.

Thirteen years have now elapsed since the introduction of SCOTT'S EMULSION of PURE NORWEGIAN COD LIVER OIL with HYPOPHOSPHITES of LIME and SODA, since which time its growth and development have been very large, not only in this country but in South America, Great Britain and a large part of Continental Europe, and it has, in a very large degree, supplanted the Plain Cod Liver Oil. Its success is largely due to the happy combination of all its components, making a perfect chemical union, that will not separate for years, which we believe is not true of any other Cod Liver Oil preparation.

The innumerable reports from Physicians, of the brilliant results obtained justifies the statement that in almost every case where Cod Liver Oil is indicated, Scott's Emulsion is infinitely superior.

Physicians who have never tried this Emulsion, or who have been induced to try something else in its stead, will do us the favor to send for sample, and we know they will always use it in preference to plain Cod Liver Oil or any other preparation.

We also call your attention to the following preparations:

CHERRY-MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula.)

Prepared from carefully selected German Buckthorn Bark, Juglans Bark, and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above— delivered free.

MEDICAL AND SURGICAL REPORTER,

P. O. Box 843. PHILADELPHIA.

THERAPEUTICS:

ITS PRINCIPLES AND PRACTICE.

BY H. C. WOOD, M.D., LL.D.

NEW (SEVENTH) EDITION.

A Work on Medical Agencies, Drugs, and Poisons, with Especial Reference to the Relations between Physiology and Clinical Medicine.

8vo. CLOTH, $6.00. SHEEP, $6.50.

It has been so thoroughly revised and so carefully rewritten, so altered in form as well as in matter, that it is a new book with little apparent resemblance to its former self. The work not only represents all that is best and newest on the subject of which it treats, but still remains, as stated by the *London Practitioner*, "the only complete treatise on the physiological action of drugs in the English language."

"No work in the English language contains so complete an account of the psychological action of drugs, and none contains a more intelligent account of the way in which drugs should be used."—*Philadelphia Medical and Surgical Reporter.*

"That a work of this kind should, within a few years, pass through so many editions, proves its popularity, its excellence, and the need for such a book. . . . It is abreast of all the latest information, and is a leader and not a follower in the path of text-books."—*Pharmaceutical Record, New York.*

"The most reliable work on therapeutics in the English language, and we cheerfully recommend it to those of our readers who desire to be versed in recent therapy."—*Philadelphia Medical Times.*

"For years, the former editions have represented in an admirable manner the onward march of therapeutic progress, and the author can rest assured that his last effort has placed the new 'Wood's Therapeutics' in the foremost rank of the subject for years to come"—*University Medical Magazine.*

"We doubt if any work published on the subject of therapeutics has proved as popular on this continent as this. The vast number of new medicines introduced during the last few years are well described. One can hardly realize the wonderful advances in this direction, and nowhere can he gain a better acquaintance with new remedies than in this work. We can recommend the book with great confidence as being a safe and reliable guide to the senior medical student and the general practitioner."—*Canadian Practitioner.*

"The book can safely be accepted as an exponent of the deserving materia medica and the enlightened therapeutics of the present day."—*Chicago Medical Journal and Examiner.*

SVAPNIA

OR

PURIFIED OPIUM

FOR PHYSICIANS USE ONLY.

Contains the Anodyne and Soporific Alkaloids, Codeia, Narceia and Morphia.

Excludes the Poisonous and Convulsive Alkaloids, Thebaine, Narcotine and Papaverine.

SVAPNIA has been in steadily increasing use for over twenty years, and whenever used has given great satisfaction.

To PHYSICIANS OF REPUTE, not already acquainted with its merits, samples will be mailed on application.

SVAPNIA is made to conform to a uniform standard of Opium of Ten per cent. Morphia strength.

GENUINE BLAUD'S PILLS.

These pills, which have been inserted in the new French Pharmacopœia, have been employed with the greatest success for more than fifty years by most French and foreign physicians, to cure anemia, chlorosis, and all chlorotic affections in which iron is indicated.

Here is the opinion of men most eminent in medical science, who have employed them:

"For thirty-five years, in which I have practised medicine, I have recognized the incontestable advantages of BLAUD'S PILLS over all other ferruginous preparations, and I regard them as the best anti-chlorotic."—DR. DOUBLE, *Ex-President of the Academy of Medicine.*

"Of all the ferruginous preparations, which have given good results in the treatment of chlorotic affections, BLAUD'S PILLS appear to us to deserve to hold the first rank."—*Dictionnaire universel de médecine*, Vol. II, p. 99.

These pills, prepared according to the genuine formule of the originator, by his nephew, Aug. Blaud, Pharmacist of the Faculty of Paris, are sold only in bottles of 200 pills and half bottles of 100 pills, at a cost of 5 and 3 francs ($1.00, and seventy-five cents), and never in smaller quantities. *See that his name is stamped on each pill.* **PARIS, 8 RUE PAYENNE, and at every Pharmacy.** (Beware of imitations.)

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

Treatment of Consumption

A Simplified Apparatus for the preparation and introduction of gases into the bowel (according to Dr. Bergeon's method) by Dr. H. N. Bryan, of Philadelphia.

This apparatus has advantages which others do not possess, and, being considerably lower in price than any devised for a similar purpose, it should commend itself to the favorable consideration of the medical profession. An illustrated descriptive circular sent to any address, on application.

Price of Apparatus, complete, in a neat portable Telescopic Case with Handle, ***$6.00***

Sample Card of the Iron-Dyed Silk (14 sizes) will be sent to any address, on application. Price, per Reel, 10 Cents.

WILLIAM SNOWDEN

Manufacturer, Importer, and Exporter of Surgical Instruments

No. 7 South Eleventh St., Philadelphia.

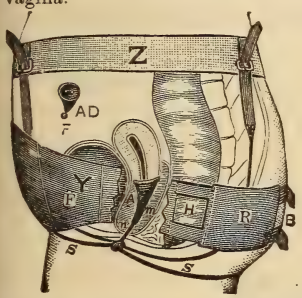
STAUFER'S

UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S) One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in diameter, the difference from one size to another being $\frac{1}{8}$ inch. The size most frequently used is $1\frac{3}{4}$ inches across the cup.

SELECTION In ordering, give exact measure around the hips, just below crest of ilium, and the width of cup on top, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE

The instrument complete, with belt Z, costs	$4.00
" " " " " Y, "	5.00

ADDRESS MISS KENNEDY, MATRON

170 Ridge Avenue, Allegheny, Pa.

PRUNO-PHOSPHORATED SYRUP.

(SYRUP PRUNO-PHOSPHOR.)

A Tonic of peculiar excellence, used with success in the treatment of Pulmonary Tuberculosis and kindred ailments.

Containing **PRUNUS VIRGINIANA,** with **Lime, Potash, Soda, Iron, Manganese, Quinine, Strychnine,** making a preparation which proves to be of considerable utility.

Pruno-Phosphorated Syrup is a powerful tonic to the nervous system, aiding the digestion and the functions of assimilation at the same time.

It supplies the necessary phosphates to give energy, and thus prevents the attacks of disease.

Especially in America it is necessary to supply in some convenient form a nerve tonic, as business and professional men are worked at high pressure, and exhaust their latent energy. If the brain power is impaired from any cause, digestion immediately suffers, and the whole body, in time, is enfeebled.

Pruno-Phosphorated Syrup contains besides **PRUNUS VIRGINIANA** and the phosphorous compounds, the nerve invigorating drug strychnia—in combination with the blood-enriching iron—all the elements to produce good digestion, pure blood, and as a result, mental activity, uniting with a tonic power the property of calming irritation and diminishing nervous excitability.

The especial recognition which this preparation has received over other combinations of **Iron** and **Quinine,** is attributable to the discovery that it neither causes **Headache** nor interferes with **Digestion.** In cases where even moderate doses of **Quinine** produce head symptoms of such severity that the desired benefit of the alkaloid cannot be obtained, **Pruno-Phosphorated Syrup** may be freely administered without any disagreeable result.

Patients intolerant of **Iron** in every other form can readily assimilate **Pruno-Phosphorated Syrup.**

DOSE.—The *tonic dose,* is one fluid drachm; *stimulant and tonic dose* combined, two fluid drachms.

Descriptive Circular furnished to Physicians on application.

Physicians desirous of giving Pruno-Phosphorated Syrup a trial, and will pay express charges, will be furnished with one regular size bottle free.

NEW YORK.

BUFFALO LITHIA WATER

IN THE

Uric Acid Diathesis, Bright's Disease of the Kidneys, Chronic Inflammation of the Bladder, &c.

Dr. THOMAS H. BUCKLER, of Paris (formerly of Baltimore), SUGGESTER OF LITHIA as a Solvent for URIC ACID.

"Nothing I could say would add to the **WELL-KNOWN REPUTATION OF THE BUFFALO LITHIA WATER. I HAVE FREQUENTLY USED IT WITH GOOD RESULTS IN URIC ACID DIATHESIS, RHEUMATISM AND GOUT,** and with this object I have ordered it to Europe from Coleman & Rogers, of Baltimore. Lithia is in no form so valuable as where it exists in the Carbonate (the form in which it is found in the **BUFFALO LITHIA WATER**), Nature's mode of solution and division in water which has passed through Lepedolite and Spondumine Mineral formation."

Dr. WM. A. HAMMOND, of New York, Surgeon-General U. S. Army (Retired), Professor of Diseases of the Mind and Nervous System in the University of New York, &c.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the **NERVOUS SYSTEM,** complicated with **BRIGHT'S DISEASE OF THE KIDNEYS** or with a **GOUTY DIATHESIS.** The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the **BUFFALO WATER CERTAINLY ACTS BETTER THAN ANY EXTEMPORANEOUS SOLUTION OF THE LITHIA SALTS,** and is, moreover, better borne by the Stomach. I also often prescribe it in those cases of **CEREBRAL HYPERÆMIA** resulting from over-mental work—in which the condition called **NERVOUS DYSPEPSIA EXISTS**—and generally with marked benefit."

HUNTER McGUIRE, M.D., LL.D., Late Professor of Surgery, Medical College of Virginia, Richmond.

"**BUFFALO LITHIA WATER,** *Spring No. 2,* as an **ALKALINE DIURETIC,** *is invaluable.* In **URIC ACID GRAVEL,** *and, indeed,* in *diseases generally dependent* upon a **URIC ACID DIATHESIS,** *it is a remedy of extraordinary potency.* I have prescribed it in cases of **RHEUMATIC GOUT,** *which had resisted the ordinary remedies, with wonderful good results.* I have *used it also in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy.*"

Dr. ROBERT BATTEY, of Georgia, SUGGESTER OF BATTEY'S OPERATION.

"I would state that I have been using the Buffalo Lithia Water, No. 2, in my practice for three years past, in cases of **CHRONIC INFLAMMATION** of the **BLADDER,** whether induced by **STONE,** by enlarged **PROSTATE** in the aged, or by **NEGLECTED GONORRHŒA, AND HAVE SECURED EXCELLENT RESULTS,** which encourages me to prescribe it for the future."

Dr. CYRUS EDSON, of New York,
Chief Inspector of Cutaneous Diseases in Health Department and President of the Board of Pharmacy.

"I have frequently made use of **BUFFALO LITHIA WATER,** Spring No. 2, in my practice, *with excellent results.* It is a potent remedy in correcting **RHEUMATIC DIATHESIS.** In a case of **URIC ACID GRAVEL,** in which I recently prescribed it, **ITS BENEFICIAL EFFECTS WERE APPARENT AFTER THE THIRD DOSE.** I have also prescribed it with great benefit in **BRIGHT'S DISEASE OF THE KIDNEYS.**"

Water in Cases of one dozen half-gallon Bottles, Five Dollars per Case, at the Springs.

The Curd of Cow's Milk
Made as Soft and Digestible as that of
Woman's Milk.

"From experiments which I have recently made — and my thanks are due to Prof. Salisbury of the Woman's Medical College, for assistance — it seems that the claim which is made by the advocates of the MELLIN'S FOOD is true, and that the addition of this food to cow's milk does cause it to break up in very small, flaky curds."— *Dr. Chas. Warrington Earle, Professor of Diseases of Children, Woman's Medical College, Professor of Obstetrics, College Physicians and Surgeons, Chicago, in his paper on Infant Feeding, before the American Medical Association, May, 1888.*

Any physician having a case in which he desires to test MELLIN'S FOOD can obtain a sample sufficient for trial, free of all expense, by application.

Doliber-Goodale Co., Boston, Mass.

The Sub-Committee of Dietetics

ON

INFANT-FEEDING,

AT THE

American Medical Association, May 9, 1888,

Recommended a formula for an Infants' Food as a very efficient substitute for mothers' milk. This formula closely resembles that of CARNRICK'S FOOD, and no other prepared food in the market can claim a like resemblance.

THE FORMULAS.

Formula Recommended by the Sub-Committee on Infant-Feeding, as above stated.

Desiccated partly peptonized milk in the form of a milk-food, containing partly converted starch (soluble starch or dextrin) and a small quantity of lactose, is a convenient and (when well made) a very efficient substitute for mothers' milk.

Formula for Carnrick's Food.

Evaporated or desiccated milk, partly peptonized and thoroughly sterilized by heat, ... 45 parts.

Dextrin, Soluble Starch and Milk Sugar, ... 55 parts.

This forms a fine dry powder, which will keep in any climate, and only requires the addition of water to render it a suitable nutrient for infants, or adults whose digestive powers have become impaired.

Carnrick's Food contains about five per cent. of fat. This is the largest amount possible to combine in a stable preparation presented in a powdered form. In cases where a larger amount of fat is desirable, a small quantity of cream may be added.

We do not claim this food to be "a PERFECT substitute for human milk."
But we do claim that

CARNRICK'S FOOD APPROACHES NEARER TO HUMAN MILK IN CONSTITUENTS AND DIGESTIBILITY THAN ANY OTHER PREPARED FOOD THAT HAS EVER BEEN PRODUCED,

and that it is the only infants' food that will, without the addition of cows' milk, thoroughly nourish a child from its birth.

We believe that CARNRICK'S FOOD solves the problem of a reliable substitute for human milk. The Casein of cows' milk, by partial predigestion with freshly made Pancreatine, is rendered as easily digestible by the infant as human milk, and, by thorough sterilization with heat, made aseptic, thus avoiding the objection to the use of milk foods in Cholera Infantum.

Full information regarding the process of manufacture will be cheerfully furnished and samples sent free to those who wish to test CARNRICK'S FOOD.

REED & CARNRICK, New York

BUFFALO LITHIA WATER

IN THE TREATMENT OF CHRONIC GASTRIC CATARRH

CLINICAL REPORTS.

CHRONIC GASTRIC CATARRH AND URIC ACID CALCULI.

A case stated by Dr. JNO. C. COLEMAN, of Scottsburg, Va., a retired Surgeon of the U. S. Navy.

"Mr. C. was for a number of years a sufferer from **CHRONIC GASTRIC CATARRH.** While his diet *was exclusively* **TEA** and **CRACKERS, BREAD** and **MILK,** *and other similar articles,* it was frequently thrown off in an undigested state soon after taking it, and at times he discharged from an empty stomach a strongly acid glairy mucus. A marked **URIC ACID DIATHESIS** supervened, consequent upon which he suffered for a period of some two years great **VESICAL IRRITATION** and possible **CYSTITIS,** attended by pain so intense and constantly present, as to require that he should be kept for the most part under the influence of opiates. After a persistent, but ineffectual exhibition of all remedies supposed to be indicated in the case, he was put for the latter affection upon the **BUFFALO LITHIA WATER,** Spring No. 2, with the happiest possible effect.

"In a few weeks, after commencing the use of it, the irritable condition of the *Bladder* was so far relieved that he was enabled to dispense entirely with the use of opiates. At the expiration of some eight weeks he had an attack of unusual severity, from which he was relieved by the discharge of a **CALCULUS,** followed at short intervals by the discharge of three others, which proved to be the termination of this trouble, as from that time there was entire subsidence of the painful symptoms described, and the *Bladder* resumed its natural state.

"While prescribed with special reference to the relief of the *Irritable Bladder,* the action of the water was not less surprisingly happy in the **GASTRIC AFFECTION,** with remarkable promptness correcting the highly acid condition of the **STOMACH,** restoring a healthy digestion and assimilation, and *tone* and *vigor* to the depressed *Nervous System.*

"In a few months he was able to eat, with perfect impunity, the coarsest articles of diet. He is now, after a lapse of several years, in robust health, having had no return of these painful maladies."

CHRONIC GASTRIC CATARRH.

Case of JOHN P. KEELING, Esq., stated by Dr. S. S. KEELING, Norfolk, Va., Member Medical Society of Virginia.

"Mr. John P. Keeling labored under **CHRONIC DYSPEPSIA,** and was always subject to attacks of *Spasmodic Gastralgia* immediately upon taking food into the stomach, which attacks were not at all amenable to treatment. Not unfrequently the stomach *rejected everything in the way of food and drink,* and he was of necessity confined to the lightest possible articles of diet, *meat and vegetables being entirely excluded.* He became so prostrated that it was with difficulty he could walk across his chamber floor, and had often to be lifted about. Such was the state of his **NERVOUS SYSTEM** *that great solicitude was felt as to his mental condition.*

"He visited Baltimore for medical aid, and was for many months under the treatment of some of the most eminent men of the profession in that city, but without beneficial result, and was finally advised that he had nothing to hope from remedies.

"Returning in an extremely critical condition to his home in the county of Princess Anne, he came under my professional care. Satisfied that medicine was unavailing in the case, I advised the **BUFFALO LITHIA WATER,** Spring No. 2. His stomach, however, was in a highly irritable condition, and I found it necessary to administer it in very small quantities; and it was at first given not exceeding an ounce at a dose, repeated at stated intervals. At the expiration of the third day the irritability of the stomach was decidedly less, and the quantity was then increased from day to day until the thirteenth day, when I found that the patient could take twelve ounces, which I regard as maximum dose at any time. Persisting in its use, on the twenty-eighth day he was free from pain, the stomach in a normal condition readily receiving both solids and liquids in moderate quantities, strength greatly increased, and nervous symptoms entirely relieved. At the expiration of the seventh week he was able to attend actively and regularly to his business on the farm. His recovery, which I regard as one of the most remarkable I ever knew of, I attribute entirely to the **BUFFALO LITHIA WATER."**

GASTRO-INTESTINAL CATARRH.

Case of Mrs. Dr. F. J. GREGORY, of Virginia, reported by F. J. GREGORY, M.D., Keysville, Va.

"For eighteen months my wife, aged forty-one years, was a sufferer from a **GASTRO-INTESTINAL CATARRH,** which resisted my best-directed efforts at relief. The taking of the smallest quantity of the most easily-digested food on the stomach would produce an attack of *nausea and vomiting, the severity of which is seldom witnessed,* and when the stomach was free of food she would have attacks of *Gastralgia of the most excruciating nature.* She also suffered from habitual constipation, and at times with hemorrhages from the bowels. I pursued the usual line of treatment, such as simple bitters, Dilute Hydrocyanic Acid, Bismuth, etc., and called to my help two of the most skilled physicians in Southside Virginia, who supplemented my treatment with some of the newer drugs, such as **EFFERVESCING BICARB. POTASS. LACTOPEPTINE, CARLSBAD MINERAL SALTS,** etc., but with no benefit, and so her condition went on from bad to worse *until death seemed almost imminent from inanition.* I then put her on a milk diet with a glass of **BUFFALO LITHIA WATER,** Spring No. 2, every hour or so during the day, and *after the use of the first bottle improvement was marked, and before a case of it was used I regarded her cure as complete.* It has been nearly two years since, and there has been only one slight recurrence, which was a few days since, and it readily disappeared on the use of the water for a few days."

Water in cases of one dozen half-gallon bottles, $5 per case, at the Springs.

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

TO EACH SUBSCRIBER.

---o---

Dear Doctor:

I beg your co-operation in endeavoring to get all the subscribers to the MEDICAL AND SURGICAL REPORTER to cordially accept the conditions usual with first-class periodicals, that is, that subscription shall be paid in advance. There are some of our subscribers who still have accounts unsettled for the year 1888, and they are urged to pay the amount due for this year as soon as possible, so as to make it easier for them when next year begins to pay for that year in advance. The evidences of approval of the REPORTER by medical men are multiplying. The subscription list is growing larger, and it is hoped that all who are now subscribers will long continue their patronage, and that they will heartily support the publisher in endeavoring to maintain those principles of business which experience shows to be best for all, not only for the publishers but for also the subscribers.

Some may think it is kind to allow subscribers to run in debt, but it is not, and it is not fair to those who pay promptly, either;

SO SEND WHAT YOU OWE, SOON.

N.B.--If you add next year's subscription money, so much the better.

Make all checks or money-orders payable to

CHARLES W. DULLES.

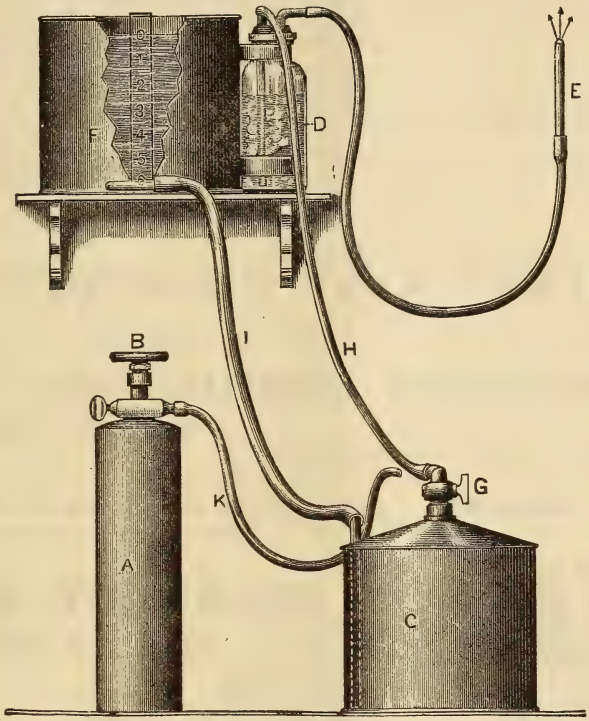
Address,

P.O.Box 843, Philadelphia.

PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

An Important Communication
TO PHYSICIANS.

Thirteen years have now elapsed since the introduction of SCOTT'S EMULSION of PURE NORWEGIAN COD LIVER OIL with HYPOPHOSPHITES of LIME and SODA, since which time its growth and development have been very large, not only in this country but in South America, Great Britain and a large part of Continental Europe, and it has, in a very large degree, supplanted the Plain Cod Liver Oil. Its success is largely due to the happy combination of all its components, making a perfect chemical union, that will not separate for years, which we believe is not true of any other Cod Liver Oil preparation.

The innumerable reports from Physicians, of the brilliant results obtained justifies the statement that in almost every case where Cod Liver Oil is indicated, Scott's Emulsion is infinitely superior.

Physicians who have never tried this Emulsion, or who have been induced to try something else in its stead, will do us the favor to send for sample, and we know they will always use it in preference to plain Cod Liver Oil or any other preparation.

We also call your attention to the following preparations:

CHERRY-MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula.)

Prepared from carefully selected German Buckthorn Bark, Juglans Bark, and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above – delivered free.

Treatment of Consumption

A Simplified Apparatus for the preparation and introduction of gases into the bowel (according to Dr. Bergeon's method) by Dr. H. N. Bryan, of Philadelphia.

This apparatus has advantages which others do not possess, and, being considerably lower in price than any devised for a similar purpose, it should commend itself to the favorable consideration of the medical profession. An illustrated descriptive circular sent to any address, on application.

Price of Apparatus, complete, in a neat portable Telescopic Case with Handle, ***$6.00***

Sample Card of the Iron-Dyed Silk (14 sizes) will be sent to any address, on application. Price, per Reel, 10 Cents.

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterat d.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: McARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

Mention this Journal. McARTHUR HYPOPHOSPHITE CO., BOSTON, Mass

The Curd of Cow's Milk Made as Soft and Digestible as that of Woman's Milk.

"From experiments which I have recently made — and my thanks are due to Prof. Salisbury of the Woman's Medical College, for assistance — it seems that the claim which is made by the advocates of the MELLIN'S FOOD is true, and that the addition of this food to cow's milk does cause it to break up in very small, flaky curds."— *Dr. Chas. Warrington Earle, Professor of Diseases of Children, Woman's Medical College, Professor of Obstetrics, College Physicians and Surgeons, Chicago, in his paper on Infant Feeding, before the American Medical Association, May, 1888.*

Any physician having a case in which he desires to test MELLIN'S FOOD can obtain a sample sufficient for trial, free of all expense, by application.

Doliber-Goodale Co., Boston, Mass.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

THE MODEL LEDGER
FOR PHYSICIANS.

"I received your "**Model Ledger**" all right. Have examined it and like the plan very much. .... I would advise any young physician to adopt your plan, and old physicians would not be injured by it. Yours truly,
HENRY L. JOY.
Marshall, Mich, Oct. 4, 1888.

We want all of our Subscribers to see our = Model Ledger =
So we will send a copy to any paid-up subscriber who will write, saying he will either buy the book when he sees it, or send it back in good order. We will mail a copy in a secure case - in which it can be sent back, if you don't want to keep it.
If you keep it, it will cost just Four Dollars: if you send it back the inspection will cost only Thirty four cents.
and the trouble of remailing it to us:
Write now to
Medical and Surgical Reporter,
P.O. Box 843. Philadelphia.

MUST BE RETURNED OR PAID FOR IN 10 DAYS!

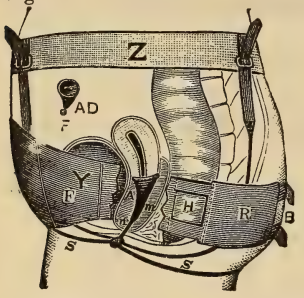
STAUFER'S

UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S) One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in diameter, the difference from one size to another being $\frac{1}{8}$ inch. The size most frequently used is $1\frac{3}{4}$ inches across the cup.

SELECTION In ordering, give exact measure around the hips, just below crest of ilium, and the width of cup on top, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE

The instrument complete, with belt Z, costs	$4.00
" " " " " Y, "	5.00

Four Books Learned in One Reading.

A Year's Work Done in Ten Days.

[From the Chaplain of Exeter College, and Houghton Syriac Prizeman, Oxford.]

COLL. EXON. OXON., Sept., 1888.

DEAR SIR: In April, 1885, while thinking of taking orders in September, I suddenly received notice that my ordination examination would be held in a fortnight. I had only *ten* (10) days in which to prepare for the Exam. I should recommend a *year's* preparation in the case of anyone so utterly unprepared as I was; but your *System had so strengthened my natural memory*, that I was able to remember and give the gist of any *book after reading it once.* I therefore *read* Lightfoot, Proctor, Harold Browne, Mosheim, &c., &c., *once*, and was *successful* in *every one* of the *nine* papers. The present Bishop of Edinburg knows the facts.

Faithfully yours,
[REV.] JAMES MIDDLETON MACDONALD, [M.A.]

To Prof. A. Loisette, 237 Fifth Ave., New York.

Perfectly taught by correspondence. Send for prospectus.

HYDROLEINE

(HYDRATED OIL)

FOR CONSUMPTION and WASTING DISEASES,

Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls equal to 120 Drops, contains:

Pure Cod Liver Oil...80 m. (drops)	Soda.....1.3 Grains.
Distilled Water.....35 "	Salicylic Acid.....1.4 "
Soluble Pancreatin.. 5 Grains.	Hyocholic Acid.....1.20 "

DOSE.—Two teaspoonfuls alone, or with twice the quantity of water to be taken thrice daily after meals.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a modicum of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in results.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph.D., F. C. S., *and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by* G. OVEREND DREWRY, M.D. ***Copies of these works sent free on application.***

SOLD AT ALL DRUG STORES, AT $1.00 PER BOTTLE.

C. N. CRITTENTON,

Sole Agent for the United States. **115 FULTON ST., NEW YORK.**

A sample of Hydroleine will be sent free upon application, to any physician (inclosing business card) in the United States.

THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES, M.D.

"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

MEDICAL AND SURGICAL REPORTER,
P. O. Box 843. PHILADELPHIA.

FELLOWS'
HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The essential elements** to the Animal Organization—Potash and Lime.

The **Oxydizing Agents**—Iron and Manganese;

The **Tonics**—Quinine and Strychnine,

And the **Vitalizing Constituent**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars sent to Physicians on Application.

FOR SALE BY ALL DRUGGISTS.

ARTIFICIAL LEGS and ARMS

WITH RUBBER HANDS AND FEET.

MARKS' PATENTS.

Over 8,000 in actual use throughout the civilized world. The use of rubber hands and feet on artificial limbs simplifies the construction so that limbs can be worn by the crippled for many years without requiring repairs. Men engaged in every conceivable occupation operate on rubber feet or use their rubber hands to great advantage.

MR. A. A. MARKS: MAMARONECK, N. Y., Dec. 21, 1887.

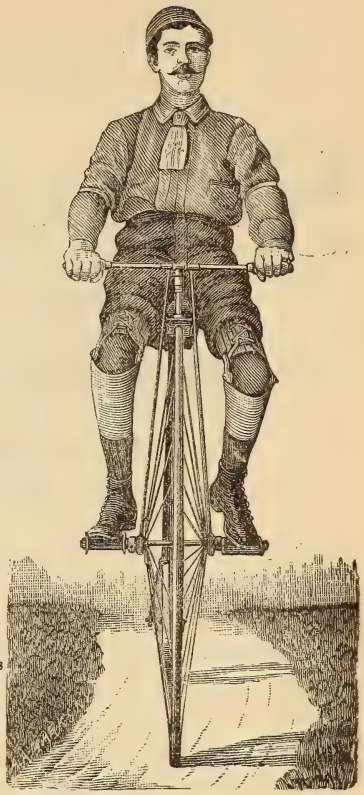
DEAR SIR: Over twelve years ago I met with the misfortune of having both my legs crushed by the railroad cars, which necessitated amputation below the knees. By the advice of my surgeons I placed myself under your care for restoration. Your reputation as the one most competent in the land had so impressed me that I felt I was soon to realize the most that skill and ingenuity could devise.

I well remember how proud I was when your genius placed me in a position in which I could indulge in youthful sports, how I availed myself of every advantage, playing ball, boating, fishing, and hunting in summer, and skating in winter.

I became quite an expert on the skates and relished the applause my antics on the ice would excite. My obligations to the pair you made for me placed me in a position to feel a sense of duty to put them to the severest test and boast of my accomplishments.

For this reason I have indulged in many sports which really belong to the sound and rugged. My latest prank is that of riding a bicycle. I found the task considerable at first, but being determined, I succeeded after repeated attempts, to ride tolerably well.

I shall only be too happy to commend your rubber feet, and will do all I can to encourage their sale. JAMES McDONALD.



By a copyright formula furnished by us on request, applicants can supply us with all the data necessary to secure fit and satisfactory results while they remain at home. One half the legs and arms furnished by us are made from measurements and profiles without our seeing the wearer. This new method is a great convenience for those living at a distance. Fit always guaranteed.

A treatise of 400 pages and 190 illustrations and nearly a thousand endorsements and testimonals sent to those needing artificial legs or arms, who will give a description of their case. The same will be sent to physicians and surgeons free of charge. Address,

A. A. MARKS, 701 BROADWAY, NEW YORK CITY.

The highest awards received at every exhibition. Endorsed by the United States Government, and commissioned by the Surgeon-General of the United States Army to supply limbs to pensioners of the United States.

THERE IS A PEPSIN

WHICH IS UNIFORMLY ACTIVE, PERMANENT, AND RELIABLE,

IT IS "FAIRCHILD'S."

This Pepsin will not spoil, will not become soft and sticky in the vial, even if left long uncorked.

Fairchild's Pepsin will not "gum up" if dispensed in powders, plain, or with the drugs usually combined with pepsin.

Fairchild's is not a partial peptone, and has none of the well-known characteristics of peptone.

Fairchild's is the pioneer pepsin, it showed the way. It "got there" early.

Its activity has never been exaggerated.

All this time, whilst other manufacturers were still offering the high-dilution saccharated and amylated article, Fairchild's Pepsin was steadily making its way on its merit. Now, no one ventures to ask a hearing for these *placebo-pepsins*.

When physicians now prescribe "pepsin" they mean pepsin—not milk, sugar, and pepsin.

All these years, Fairchild's Pepsin was always and everywhere found to do just what was claimed for it—in spite of the attitude, genuine or assumed, which held that all "claims" about pepsin must be taken with a liberal discount.

Every *bona fide* test demonstrated its reliability.

We have never found it necessary to explain or excuse any deficiency or inaction as due to "deteriorated" specimens.

Fairchild's will not disappoint the prescriber under any condition proper for pepsin.

WITH SUCH A RECORD Fairchild's Pepsin is a good one to stand by.

THE NEW HYPNOTIC

SULFONAL-BAYER

MANUFACTURED BY THE

FARBENFABRIKEN formerly FRIEDR. BAYER & CO.

ELBERFELD.

SULFONAL was first discovered by Prof. E. Baumann of the University at Freiburg; its physiological actions and clinical uses were first examined by Prof. Kast, who is also a member of the medical faculty at Freiburg University.

SULFONAL has been found to be a reliable hypnotic which has none of the peculiar effects of the narcotics on the nervous and circulatory systems. It has no injurious secondary effects, and may be taken in the proper doses with impunity in order to produce natural, quiet sleep.

It has another great advantage which is of considerable practical importance, viz: Its absolute freedom from taste and odor.

This new hypnotic has been tried quite extensively during the last twelve months and very favorable results are reported by various observers.

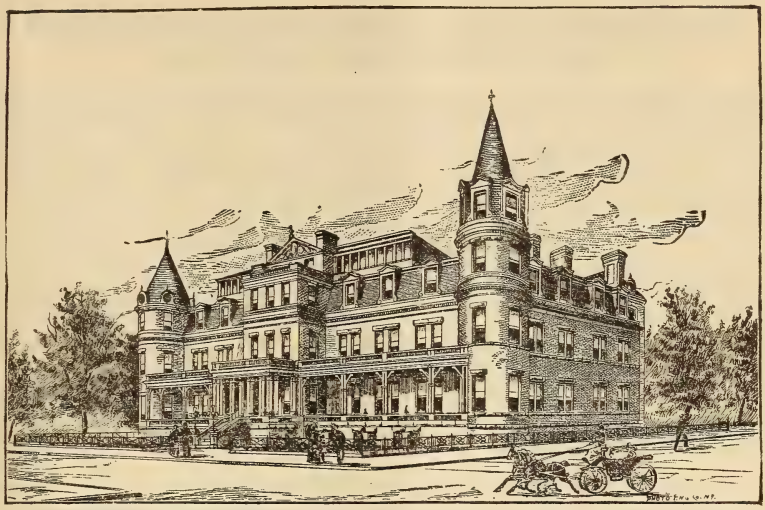
It is important that the druggist sees that the article he uses is labeled "Sulfonal-Bayer, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld; W. H. Schieffelin & Co., New York, sole licensees and sole agents for the United States." This is furnished in a state of absolute purity, which has been found to be indispensable in order to obtain certain and undisturbed action. The manufacturers have provided means for the continual examination of their product by the most competent authorities, not only as regards its chemical purity, but also with reference to its medicinal activity.

We have in preparation a pamphlet on *Sulfonal-Bayer* which we will mail to applicants when published.

We offer *Sulfonal-Bayer* in half ounce and one ounce bottles, or in the form of tablets, containing 15 grains each, put up in tubes of 10 tablets.

W. H. SCHIEFFELIN & CO.

170 and 172 William St., New York.



DR. WILLIAM A. HAMMOND'S SANITARIUM

—FOR—

DISEASES OF THE NERVOUS SYSTEM,

WASHINGTON, D. C.

DR. WILLIAM A. HAMMOND announces to the medical profession that he has returned from New York to Washington, D. C., where he has established, in a building especially erected for the purpose, a *Sanitarium* for the treatment of mild and curable cases of mental derangement, diseases of the nervous system generally, cases of the morphia and chloral habits, and such other affections as may properly be treated by the remedial agencies under his control. His experience during many years has convinced him that most diseases embraced within the above-named classes can be managed much more successfully in an institution of this kind, under the constant supervision of the physician and with the aid of means not otherwise at command, than when the patients are seen by their medical advisers at intervals of several hours or days.

The *Sanitarium*, which has been constructed under the superintendence of A. B. Mullett, Esq., late architect of the United States Treasury department, and is situated on Columbia Heights, at the corner of Fourteenth Street and Sheridan Avenue. The position is the highest in the immediate vicinity of Washington, the soil is dry, and all the surroundings are free from noxious influences. It is readily reached by the Fourteenth Street Railway, the cars of which run to the doors. The building is very large, and as perfect in structure and arrangements as is possible from a knowledge of sanitary science and of the requirements of such an institution. It accommodates about thirty patients. So far as the rooms, table, etc., are concerned, they are equal to such as exist in the best hotels of our large cities. Electricity in all its forms; baths, douches, massage, inhalations, nursing, etc., are provided as may be required by patients, in addition to such other medical treatment as may be deemed advisable.

A large *Solarium* for sun-baths and exercise in cold or inclement weather and heated with steam in winter, is constructed on the top of the main building.

Each patient is thoroughly examined by Dr. Hammond and receives his daily personal attention, while Dr. E. L. Tompkins, a physician of ample hospital experience and of tried executive ability, resides in the institution and has, under Dr. Hammond, the immediate superintendence.

The *Sanitarium* is now opened for the reception of patients.

For further information Dr. Hammond can be addressed at The Sanitarium, Fourteenth Street and Sheridan Avenue, Washington, D. C.

An Important Communication
TO PHYSICIANS.

Thirteen years have now elapsed since the introduction of SCOTT'S EMULSION of PURE NORWEGIAN COD LIVER OIL with HYPOPHOSPHITES of LIME and SODA, since which time its growth and development have been very large, not only in this country but in South America, Great Britain and a large part of Continental Europe, and it has, in a very large degree, supplanted the Plain Cod Liver Oil. Its success is largely due to the happy combination of all its components, making a perfect chemical union, that will not separate for years, which we believe is not true of any other Cod Liver Oil preparation.

The innumerable reports from Physicians, of the brilliant results obtained justifies the statement that in almost every case where Cod Liver Oil is indicated, Scott's Emulsion is infinitely superior.

Physicians who have never tried this Emulsion, or who have been induced to try something else in its stead, will do us the favor to send for sample, and we know they will always use it in preference to plain Cod Liver Oil or any other preparation.

We also call your attention to the following preparations:

CHERRY-MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula.)

Prepared from carefully selected German Buckthorn Bark, Juglans Bark, and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above - delivered free.

The Curd of Cow's Milk
Made as Soft and Digestible as that of Woman's Milk.

"From experiments which I have recently made — and my thanks are due to Prof. Salisbury of the Woman's Medical College, for assistance — it seems that the claim which is made by the advocates of the MELLIN'S FOOD is true, and that the addition of this food to cow's milk does cause it to break up in very small, flaky curds."— *Dr. Chas. Warrington Earle, Professor of Diseases of Children, Woman's Medical College, Professor of Obstetrics, College Physicians and Surgeons, Chicago, in his paper on Infant Feeding, before the American Medical Association, May, 1888.*

Any physician having a case in which he desires to test MELLIN'S FOOD can obtain a sample sufficient for trial, free of all expense, by application.

TO EACH SUBSCRIBER.

---o---

Dear Doctor:

I beg your co-operation in endeavoring to get all the subscribers to the MEDICAL AND SURGICAL REPORTER to cordially accept the conditions usual with first-class periodicals, that is, that subscription shall be paid in advance. There are some of our subscribers who still have accounts unsettled for the year 1888, and they are urged to pay the amount due for this year as soon as possible, so as to make it easier for them when next year begins to pay for that year in advance. The evidences of approval of the REPORTER by medical men are multiplying. The subscription list is growing larger, and it is hoped that all who are now subscribers will long continue their patronage, and that they will heartily support the publisher in endeavoring to maintain those principles of business which experience shows to be best for all, not only for the publishers but for also the subscribers.

Some may think it is kind to allow subscribers to run in debt, but it is not, and it is not fair to those who pay promptly, either;

SO SEND WHAT YOU OWE, SOON.

N.B.--If you add next year's subscription money, so much the better.

Make all checks or money-orders payable to

CHARLES W. DULLES.

PRICE REDUCED.

True Salicylic Acid.

CRYSTALLIZED FROM

WINTERGREEN OIL.—ITS NATURAL SOURCE.

DR. P. W. LATHAM, Downing Professor of Medicine at Cambridge (England), lecturing on the treatment of gout and rheumatism at the Royal College of Physicians, says:

"The true Salicylic Acid obtained from the vegetable kingdom must alone be employed. If you have to give large doses, avoid giving the artificial product obtained from carbolic acid, however much it may have been dialyzed and purified. Give the acid without any alkali or base," etc.

A reprint of this exceedingly valuable paper will be sent on application.

A DESIDERATUM—not always appreciated.

The quality of medicines used in the prescription is as important a factor in the cure of disease as a correct diagnosis; and a physician violates no code, either of ethics or morals, in demanding of his druggist that which he knows to be reliable, instead of leaving to the latter to decide whose preparations he shall or shall not use.

GENUINE BLAUD'S PILLS.

These pills, which have been inserted in the new French Pharmacopœia, have been employed with the greatest success for more than fifty years by most French and foreign physicians, to cure anemia, chlorosis, and all chlorotic affections in which iron is indicated.

Here is the opinion of men most eminent in medical science, who have employed them.

"For thirty-five years, in which I have practised medicine, I have recognized the incontestable advantages of BLAUD'S PILLS over all other ferruginous preparations, and I regard them as the best anti-chlorotic."—DR. DOUBLE, *Ex-President of the Academy of Medicine.*

"Of all the ferruginous preparations, which have given good results in the treatment of chlorotic affections, BLAUD'S PILLS appear to us to deserve to hold the first rank."—*Dictionnaire universel de médecine*, Vol. II, p. 99.

These pills, prepared according to the genuine formula of the originator, by his nephew, Aug. Bland, Pharmacist of the Faculty of Paris, are sold only in bottles of 200 pills and half bottles of 100 pills, at a cost of 5 and 3 francs ($1.00, and seventy-five cents), and never in smaller quantities. *See that his name is stamped on each pill.* PARIS, 8 RUE PAYENNE, and at every Pharmacy. (Beware of imitations.)

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

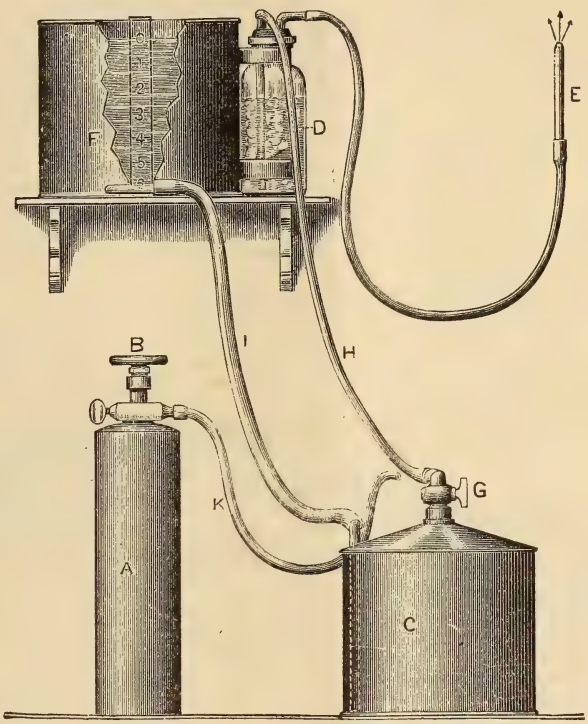
PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES, M D.

"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

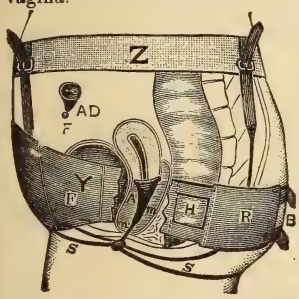
STAUFER'S

UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S). One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in diameter, the difference from one size to another being $\frac{1}{8}$ inch. The size most frequently used is $1\frac{3}{4}$ inches across the cup.

SELECTION In ordering, give exact measure around the hips, just below crest of ilium, and the width of cup on top, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE

The instrument complete, with belt Z, costs	$4.00
" " " " " Y, "	5.00

BUFFALO LITHIA WATER

IN THE TREATMENT OF

ALBUMINURIA, WHETHER OF BRIGHT'S DISEASE, PREGNANCY, OR SCARLET FEVER.

Dr. WM. B. TOWLES, Professor of Anatomy and Materia Medica in the Medical Department of the University of Virginia.

"BUFFALO LITHIA WATER, No. 2, belongs to the ALKALINE or, *perhaps, to the* ALKALINE-SALINE Class, *for it has proved far more efficacious in many diseased conditions than any of the simple* ALKALINE *waters.*

. . . . . .

"*Its effects are marked in causing a disappearance of* ALBUMEN *from the Urine.* In a single case of BRIGHT'S DISEASE OF THE KIDNEYS I witnessed *decided beneficial results from its use, and from its action in this case I should have great confidence in it as a remedy in certain stages of the disease.*"

Dr. GRAEME M. HAMMOND, of New York, Professor of Diseases of the Mind and Nervous System in the New York Post-Graduate Medical School and Hospital.

"In *all* cases of BRIGHT'S DISEASE of the KIDNEYS I have found BUFFALO LITHIA WATER *of the greatest service in increasing the quantity of urine and in eliminating the* ALBUMEN."

Dr. GEORGE W. MILTENBERGER, Professor of Obstetrics, University of Maryland,

Before the Medical and Chirurgical Faculty of the State of Maryland, recommended BUFFALO LITHIA WATER as an ALKALINE Diuretic in ALBUMINURIA of PREGNANCY.—See *Trans. Faculty of State of Maryland*, 1886.

Dr. WM. H. DOUGHTY, Professor of Materia Medica and Therapeutics, Medical College of Georgia; Member of American Medical Association, etc.

"Over the NAUSEA AND VOMITING OF PREGNANCY, PARTICULARLY IN THE LATTER MONTHS, WHERE URÆMIC CONDITIONS are possibly established, and in PUERPERAL CONVULSIONS, URÆMIA CO-EXISTING, BUFFALO LITHIA WATER often exerts *marked control.*"

Dr. CALEB WINSLOW, 23 McCulloh Street, Baltimore, Member of the Medical and Chirurgical Faculty of Maryland.

"I have found the BUFFALO LITHIA WATER, Spring No. 2, of marked service in relieving the *Nausea of Pregnant Women.* I frequently resort to it at intervals *during the whole course of Pregnancy.* Being *antacid, laxative, diuretic, and tonic, it seems well adapted to relieve the disturbances usually attendant upon Gestation, and I have no doubt its free use might remove* URÆMIC POISON, *and prevent Convulsions produced thereby.*"

Dr. JOS. HOLT, New Orleans, President Board of Health, State of Louisiana.

"I have prescribed BUFFALO LITHIA WATER freely in affections of the *Kidneys* and *Urinary* passages, particularly in GOUTY *subjects*, in ALBUMINURIA, and in irritable conditions of the *Bladder* and *Urethra* in *females.* The results have been such as to satisfy me *of the extraordinary value of this Water in a large class of cases usually most difficult to treat.*"

Dr. JAMES B. McCAW, Professor of the Practice of Medicine in the Virginia Medical College.

[Extract from the Proceedings of the Richmond Academy of Medicine, October 15, 1878.]

"Dr. McCaw also spoke of the great value of BUFFALO LITHIA WATER in ALBUMINURIA of *Scarlet Fever* and in ALBUMINURIA of *Pregnant Women.*"

Dr. J. T. DAVIDSON, New Orleans, La., ex-President New Orleans Surgical and Medical Association.

"I have for several years prescribed BUFFALO LITHIA WATER, Spring No. 2, in all cases of *Scarlet Fever*, directing it to be drunk *ad libitum, with the effect of relieving all traces of* ALBUMEN *in the urine*, and have found it equally efficacious in renal diseases requiring the use of alkaline water."

Dr. G. W. SEMPLE, Hampton, Va., President Medical Society of Virginia.

"In SCARLET FEVER I have known BUFFALO LITHIA WATER *restore a healthy and abundant secretion of Urine, when it was highly charged with* ALBUMEN *and the secretion almost suppressed.*"

Dr. MARTIN L. JAMES, of Richmond, Va., Professor of Materia Medica and Therapeutics, Medical Society of Virginia.

[Proceedings of the Richmond, Virginia, Academy of Medicine, December 16, 1880.]

"The President of the Academy, Dr. M. L. James, reported a case of *Congestion* of the *Kidneys* in a lady eight months advanced in *Pregnancy, attended by marked Œdema*, both over the extremities and surface, and by URÆMIC POISONING *to such an extent as very seriously impaired the vision of the patient*, relieved by the free use of this Water for three weeks.

"Other remedies, he stated, were used in these cases, *but the favorable results seemed clearly attributable to the action of the Water.*"

Dr. HARVEY L. BYRD, of Baltimore, President and Professor of Obstetrics and Diseases of Women and Children in the Baltimore Medical College, formerly Professor of Practical Medicine, etc.

"I have prescribed BUFFALO LITHIA WATER with the most satisfactory results, both as a *remedy* and *prophylactic* in the *Parturient* or *Pregnant Puerperal Eclampsia* or *Convulsions; and I may say that I know of no remedy of equal efficacy with the Water of Spring No. 2 in Sequelæ of Scarlatina.*

"It has an *ascertained value* in BRIGHT'S DISEASE. *A knowledge of its action in that disease thus far would seem* to warrant the belief that it would, in many instances, *at least in its early stages, arrest it entirely, and in its more advanced stage prove a decided comfort and palliative.*

Water in cases of one dozen half-gallon bottles, $5.00 per case at the Springs.

THOMAS F. GOODE, Proprietor

BUFFALO LITHIA SPRINGS, VIRGINIA.

SUCCUS ALTERANS

(McDADE.)

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica Lappa Minor, Phytolacca Decandra, Smilax Sarsaparilla, and Xanthoxylum Carolinianum, as collected by Dr. Geo. W. McDade, exclusively for Eli Lilly & Co., and endorsed by Dr. J. Marion Sims.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood* and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree; is endorsed by the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides, and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS is giving satisfactory results in treatment of *Chronic Rheumatism*, and can be used with confidence.

SUCCUS ALTERANS may be given for any length of time, without injury to the patient.

SUCCUS ALTERANS is put up in pint round amber bottles, and *never in bulk.*

PHYSICIANS who have not received Dr. McDade's latest publication, the Monographia Syphilitica, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by Dr. D. H. Goodwillie, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

ELIXIR PURGANS.

Elixir Purgans (Lilly) reliably stimulates the dormant liver without undue irritation, and has gentle yet positive effect upon the alimentary tract. In Habitual Constipation, so common in Women and Children, it will be found particularly useful. Its endorsement at Bellevue and many other prominent hospitals East and West, as well as its employment in general practice by the most eminent medical men, confirms the experience of years in its use.

Each Teaspoonful Represents	
Rhamnus Purshiana, -	10 grs.
Euonymus Atropur., - -	8 grs.
Cassia Acutifolia (Purif.)	10 grs.
Iris Versicolor, - - -	4 grs.
Hyoscyamus Niger, -	2 grs.
Aromatics, etc.	

IN PRESCRIBING, PLEASE BE CAREFUL TO WRITE

ELIXIR PURGANS (LILLY),

THAT OTHER PREPARATIONS MAY NOT BE SUBSTITUTED.

HIGHLY RECOMMENDED.

We take pleasure in endorsing the Elixir Purgans (Lilly) as prepared from the above formul[illegible] for in it we find a near approach to positive *perfection* in the form of a *Liquid Cathartic*, and, from our experience with the preparation, can highly recommend it to the profession.

SUPPLIED BY ALL DRUGGISTS.

Before you begin the New Year

think how much time you have spent in this year over your accounts, and what a bother it has been to make out your bills!

Now one of the great merits of

The Model Ledger

is that it enables a physician to make out his bills with great ease. Beside this, it tells at a glance just how much he has earned in any quarter; how much he has received; and how much is still due him. These are all good things for a doctor to know.

Specimen Pages will be sent on Application.

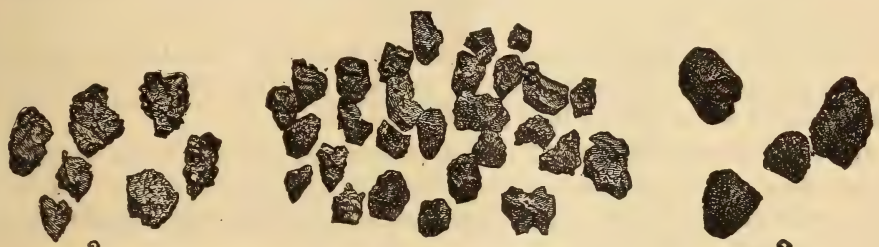
Buffalo Lithia Water

In the TREATMENT OF URINARY DEPOSIT.

Case of Dr. B. J. WEISTLING, of Middleton, Pa., stated by himself.

"Experience in its use in **STONE in the BLADDER** in my own person enables me to attest the efficacy of the **BUFFALO LITHIA WATER** in this painful malady. After having been long subjected to sufferings, the intensity of which cannot be described, I have, under the influence of this Water, passed an ounce of **CALCULI (URIC ACID)**, some of which weighed as much as four grains, affording inexpressible relief and leaving me in a condition of comparative ease and comfort.

"On one occasion I passed thirty-five **CALCULI** in forty-eight hours. The appearance of these **CALCULOUS NUCLEI** indicates unmistakably, I think, that they were all *component particles of one large* **CALCULUS** *destroyed by the action of the Water, by means of solution and disintegration.* At my advanced period of life (I am seventy-seven years and six months of age), and in my feeble general health, a surgical operation was not to be thought of, and the Water seems to have accomplished all that such an operation, if successful, could have done."



[The above plate is from a photograph, and represents the exact size and shape of some of the Calculi passed by Dr. Weistling. They were preserved by his son, Dr. J. Weir Weistling.]

Case stated by Dr. G. HALSTED BOYLAND, late Professor of Surgery, Baltimore Medical College, Member American Medical Association.

"The case of Mr. C., which came under my observation as Resident Physician at the Springs during the season of 1884, affords undoubted evidence that Buffalo Lithia Water is a **SOLVENT** *for Urinary Deposit*, commonly known as **STONE in the BLADDER.** He was operated upon for **STONE**, the operation affording but partial and temporary relief. A year afterward he visited the **BUFFALO LITHIA SPRINGS**, at the same time passing small quantities of a *Urinary Deposit*, of the **TRIPLE PHOSPHATE of AMMONIA** and **MAGNESIA VARIETY**, and his sufferings such as required that he should be kept constantly under the influence of opiates. In some eight weeks the solvent properties of the Water *were evident in the diminished consistency of the deposit, the increased quantity discharged, and by its change from Concrete Lumps to fine Sand*, which he discharged to the amount of *Four Ounces.* After a time, however, the quantity gradually diminished, and finally ceased, and he left the Springs *with the deposit dissolved* and *washed out of the system*, and the *Diathesis fons et origi morbi* altered. There had been a disappearance of the attending distressing symptoms, and great improvement in his general condition."

Dr. MARTIN L. JAMES, of Richmond, Va., Professor of Materia Medica and Therapeutics, Medical Society of Virginia.

[Proceedings of the Richmond, Virginia, Academy of Medicine, December 16, 1880.]

"The President of the Academy, Dr. M. L. James, reported three cases of marked **URIC ACID DIATHESIS** successfully treated by the Water of Spring No. 2 of the **BUFFALO LITHIA SPRINGS** of Virginia. In one of these patients there were, as a result of this Diathesis, **SANDY DEPOSITS** in the *Urine, Inflammation of the Kidneys, Irritability of the Bladder, and Hæmaturia*, and, finally, the passage of a **CALCULUS** of the size of a cherry, formed on a blood-clot as a nucleus. In another case there were frequent attacks of **NEPHRITIC COLIC**, attended by **SANDY DEPOSITIONS** in the urine. After the free use of this Water in these cases, no further manifestations of the disorder occurred."

Dr. HENRY M. WILSON, of Baltimore, ex-President Medical and Chirurgical Faculty of Maryland.

"My experience in the use of the **BUFFALO LITHIA WATER** has not been large, *but it is of such a positive character that I do not hesitate to express my preference for it, as a* **DIURETIC** in **URINARY CALCULI,** *over all other waters that I have ever used.*"

Water in cases of one dozen half-gallon bottles, $5 per case, at the Springs.

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

THE NEW HYPNOTIC

SULFONAL-BAYER

MANUFACTURED BY THE

FARBENFABRIKEN formerly FRIEDR. BAYER & CO.

ELBERFELD.

SULFONAL was first discovered by Prof. E. Baumann of the University at Freiburg; its physiological actions and clinical uses were first examined by Prof. Kast, who is also a member of the medical faculty at Freiburg University.

SULFONAL has been found to be a reliable hypnotic which has none of the peculiar effects of the narcotics on the nervous and circulatory systems. It has no injurious secondary effects, and may be taken in the proper doses with impunity in order to produce natural, quiet sleep.

It has another great advantage which is of considerable practical importance, viz: Its absolute freedom from taste and odor.

This new hypnotic has been tried quite extensively during the last twelve months and very favorable results are reported by various observers.

It is important that the druggist sees that the article he uses is labeled "Sulfonal-Bayer, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld; W. H. Schieffelin & Co., New York, sole licensees and sole agents for the United States." This is furnished in a state of absolute purity, which has been found to be indispensable in order to obtain certain and undisturbed action. The manufacturers have provided means for the continual examination of their product by the most competent authorities, not only as regards its chemical purity, but also with reference to its medicinal activity.

We have in preparation a pamphlet on *Sulfonal-Bayer* which we will mail to applicants when published.

We offer *Sulfonal-Bayer* in half ounce and one ounce bottles, or in the form of tablets, containing 15 grains each, put up in tubes of 10 tablets.

W. H. SCHIEFFELIN & CO.

170 and 172 William St., New York.

THERE IS A PEPSIN

WHICH IS UNIFORMLY ACTIVE, PERMANENT, AND RELIABLE,

IT IS "FAIRCHILD'S."

This Pepsin will not spoil, will not become soft and sticky in the vial, even if left long uncorked.

Fairchild's Pepsin will not "gum up" if dispensed in powders, plain, or with the drugs usually combined with pepsin.

Fairchild's is not a partial peptone, and has none of the well-known characteristics of peptone.

Fairchild's is the pioneer pepsin, it showed the way. It "got there" early.

Its activity has never been exaggerated.

All this time, whilst other manufacturers were still offering the high-dilution saccharated and amylated article, Fairchild's Pepsin was steadily making its way on its merit. Now, no one ventures to ask a hearing for these *placebo-pepsins*.

When physicians now prescribe "pepsin" they mean pepsin—not milk sugar, and pepsin.

All these years, Fairchild's Pepsin was always and everywhere found to do just what was claimed for it—in spite of the attitude, genuine or assumed, which held that all "claims" about pepsin must be taken with a liberal discount.

Every *bona fide* test demonstrated its reliability.

We have never found it necessary to explain or excuse any deficiency or inaction as due to "deteriorated" specimens.

Fairchild's will not disappoint the prescriber under any condition proper for pepsin.

With Such a Record Fairchild's Pepsin is a good one to stand by.

FAIRCHILD BROS. & FOSTER,
82 and 84 Fulton St., New York.
7 Snow Hill Buildings, London, E. C.

The Curd of Cow's Milk Made as Soft and Digestible as that of Woman's Milk.

"From experiments which I have recently made — and my thanks are due to Prof. Salisbury of the Woman's Medical College, for assistance — it seems that the claim which is made by the advocates of the MELLIN'S FOOD is true, and that the addition of this food to cow's milk does cause it to break up in very small, flaky curds."— *Dr. Chas. Warrington Earle, Professor of Diseases of Children, Woman's Medical College, Professor of Obstetrics, College Physicians and Surgeons, Chicago, in his paper on Infant Feeding, before the American Medical Association, May, 1888.*

Any physician having a case in which he desires to test MELLIN'S FOOD can obtain a sample sufficient for trial, free of all expense, by application.

Doliber-Goodale Co., Boston, Mass.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases. Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

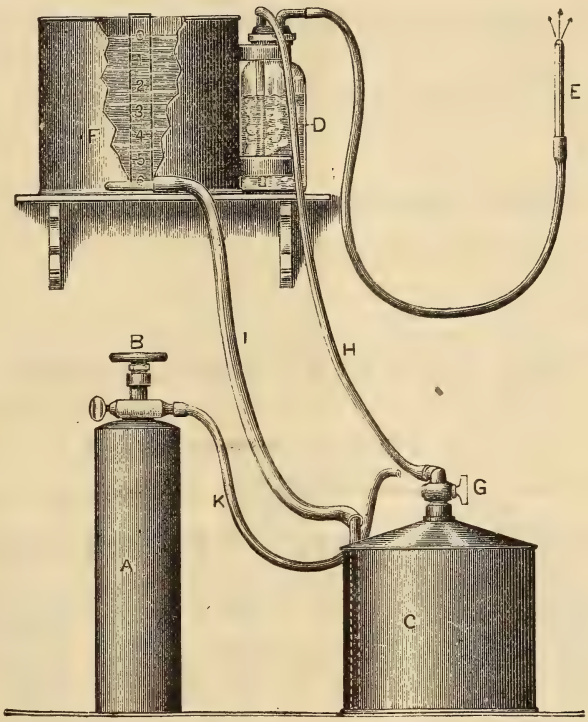
PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

POSITIVE MEDICATION

WITH POSITIVE AND DECIDED RESULTS, BY THE EMPLOYMENT OF THE

Viburnum Compound of Dr. Hayden

IN

Female Disorders

AND ALL SPASMODIC AFFECTIONS OF BOTH SEXES

TWENTY-TWO YEARS before the profession, without accident or complaint. Absolutely safe and free from all NARCOTICS or poisons—prompt and reliable in its action with no unpleasant sequelæ.

THE VIBURNUM COMPOUND of Dr. Hayden is employed in the leading hospitals and remedial institutions and by the most eminent physicians and gynæcologists with marked success.

We have the testimonials of

FIVE THOUSAND PHYSICIANS

testifying to the great merits of the VIBURNUM COMPOUND of Dr. Hayden—more than were ever given before for any special remedy in the world. Dispensed by all reliable Apothecaries, put up in 4 oz., 10 oz., and 16 oz. bottles.

For formula, report of cases, treatment, special directions, and much other interesting matter, and the written testimonials of

ONE THOUSAND PHYSICIANS

send your address for our eighty-page ILLUSTRATIVE HANDBOOK, FREE.

DETROIT COLLEGE OF MEDICINE.

SESSION 1888-89.

Clinical and Practical teaching are made an important feature of this College. Clinical instruction is given daily at HARPER, ST. MARY'S, and ST. LUKE'S HOSPITAL, at the COLLEGE, at COLLEGE EYE and EAR INFIRMARY, ST. MARY'S FREE EYE and EAR INFIRMARY, and at the three FREE DISPENSARIES. The facilities offered by this college are unsurpassed for the practical study of MEDICINE, SURGERY, OBSTETRICS, GYNÆCOLOGY, DISEASES OF CHILDREN, GENITO-URINARY, and ORTHOPÆDIC SURGERY, OPHTHALMOLOGY and OTOLOGY, DERMATOLOGY and LARYNGOLOGY.

REGULAR SESSION opens on Wednesday, September 26, and continues six months. During the session, the Professors will take special pains to examine the Students upon the subjects of the previous lectures.

SPRING SESSION begins March 27th, 1889, and closes June 17th.

FEES.—Matriculation fee, $5; Fees for Regular Session, $50; Spring Session, $10, to those who attend the regular term—to all others, $25; Hospital Fee, $10; Graduation Fee, $30; Perpetual Ticket, $100.

For further particulars, and for College Circular, apply to

33 Lafayette Ave., Detroit, Mich.

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterated.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: McARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

Mention this Journal. McARTHUR HYPOPHOSPHITE CO., BOSTON, Mass.

Dr. Cupid's Advice.

It is a full and complete diet, prepared with water only. Always uniform in quality, and the most economical food available.

THOMAS LEEMING & CO., SOLE AGENTS, NEW YORK.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength and efficacy than heretofore

The ordinary dose is a large wineglassful (4 ounces), taken fasting. Most efficacious and more acceptable to the palate when heated or mixed with an equal quantity of very hot water.

"The most suitable aperient for prolonged use."—Prof. SEEGEN.

"After twenty years' use, I appreciate it as highly as ever."—Prof. VIRCHOW.

OF ALL DRUGGISTS AND MINERAL-WATER DEALERS.

YOU WILL FIND **BROMO-CAFFEINE** OF GREATEST SERVICE IN

OF ALL TYPES **NERVOUS HEADACHES** OF ALL TYPES

Headaches from Loss of Sleep, Physical Fatigue, Excessive Study, Mental Anxiety, Neurasthenia, Dysmenorrhœa, Pregnancy, or other Ovarian Irritation. Relieves Insomnia, and is very useful in Asthma, Whooping Cough and Nervous Cough. Prevents Tinnitis Aurium during the administration of Quinine. Cures Sea Sickness, Quiets the Restlessness of Alcoholism, Morphia Craving, &c. Relieves Anxiety and Promotes Sleep.

LITTELL'S LIVING AGE.

IN 1889 **THE LIVING AGE** enters upon its forty-sixth year. Approved in the outset by Judge Story, Chancellor Kent, President Adams, historians Sparks, Prescott, Ticknor, Bancroft, and many others, it has met with constant commendation and success.

A WEEKLY MAGAZINE, it gives fifty-two numbers of sixty-four pages each, or more than **Three and a Quarter Thousand** double-column octavo pages of reading-matter yearly. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a completeness nowhere else attempted,

The best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature, and from the pens of

The Foremost Living Writers.

The ablest and most cultivated intellects, in every department of Literature, Science, Politics, and Art, find expression in the Periodical Literature of Europe, and especially of Great Britain.

The Living Age, forming four large volumes a year, furnishes from the great and generally inaccessible mass of this literature the only compilation that, while within the reach of all, is satisfactory in the COMPLETENESS with which it embraces whatever is of immediate interest, or of solid, permanent value.

It is therefore indispensable to every one who wishes to keep pace with the events or intellectual progress of the time, or to cultivate in himself or his family general intelligence and literary taste.

OPINIONS.

"No man who understands the worth and value of this sterling publication would think of doing without it. . Nowhere else can be found such a comprehensive and perfect view of the best literature and thought of our times. . Every article is an apple of gold in a picture of silver. . It furnishes to all the means to keep themselves intelligently abreast of the time."—*Christian at Work, New York.*

"It is a *living* picture of the age on its literary side. It was never brighter, fresher, or more worthy of its wide patronage. . To glance at its table of contents is in itself an inspiration. . No man will be behind the literature of the times who reads THE LIVING AGE."—*Zion's Herald, Boston.*

"Perennial in its attractions for the intelligent reader. It is one of those few publications, weekly or monthly, which seem indispensable. . The only possible objection that could be urged to it is the immense amount of reading it gives. . There is nothing noteworthy in science, art, literature, biography, philosophy, or religion, that cannot be found in it. It is a library in itself. . Such a publication exhausts our superlatives."—*The Churchman, New York*

"Replete with all the treasures of the best current thought, the best fiction, and the best poetry of the day. . It stands unrivalled."—*The Presbyterian, Phila.*

"The more valuable to a man, the longer he takes it. He comes to feel that he cannot live without it."—*New-York Evangelist.*

"Years of acquaintance with its weekly issues have impressed us more and more with a sense of its value and importance in an age when knowledge has increased beyond all precedent, and the multiplication of publications of all sorts makes it impossible for any one to keep up with the current. By the careful and judicious work put into the editing of THE LIVING AGE, it is made possible for the busy man to know something of what is going on with ever increasing activity in the world of letters. Without such help he is lost."—*Episcopal Recorder, Philadelphia.*

"Through its pages alone it is possible to be as well informed in current literature as by the perusal of a long list of monthlies."—*Philadelphia Inquirer.*

"The readers miss very little that is important in the periodical domain."—*Boston Journal.*

"One of the few periodicals worth keeping in a library. . It maintains its leading position in spite of the multitude of aspirants for public favor."—*New-York Observer.*

"Its value can hardly be reckoned in dollars and cents. . A repository of the best thought of the best writers of our day and generation."—*Boston Commonwealth.*

"Biography, fiction, science, criticism, history, poetry, travels, whatever men are interested in, all are found here."—*The Watchman, Boston.*

"It may be truthfully and cordially said that it never offers a dry or valueless page."—*New-York Tribune.*

"It is edited with great skill and care, and its weekly appearance gives it certain advantages over its monthly rivals."—*Albany Argus.*

"It saves much labor for busy people who wish to keep themselves well informed upon the questions of the day."—*The Advance, Chicago.*

"Still holds its foremost place."—*Troy Times.*

"Continually increases in value."—*Every Evening, Wilmington, Del.*

"It furnishes a complete compilation of an indispensable literature."—*Chicago Evening Journal.*

"Recent numbers show the wide range of thought and careful discrimination of editorship which have so long distinguished it. . For the amount of reading-matter contained the subscription is extremely low."—*Christian Advocate, Nashville.*

"It enables its readers to keep fully abreast of the best thought and literature of civilization."—*Christian Advocate, Pittsburgh.*

"In this weekly magazine the reader finds all that is worth knowing in the realm of current literature. . As a weekly record of the literary and scientific progress of the age it is indispensable."—*Canada Presbyterian, Toronto.*

"Rarely, indeed, will the seeker of what is most noteworthy in periodical literature be disappointed if he turns to THE LIVING AGE. . Coming once a week, it gives, while yet fresh, the productions of the foremost writers of the day. . It is a reflection, as its name implies, of the best life and thought of the age, and as such is indispensable to all who would keep abreast of our manifold progress. . It is absolutely without a rival."—*Montreal Gazette.*

PUBLISHED WEEKLY at $8.00 a year, *free of postage.*

☞ **TO NEW SUBSCRIBERS for the year 1889,** remitting before Jan. 1, the weekly numbers of 1888 issued after the receipt of their subscriptions, will be sent *gratis.*

CLUB PRICES FOR THE BEST HOME AND FOREIGN LITERATURE.

["Possessed of LITTELL'S LIVING AGE, and of one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"—*Philadelphia Evening Bulletin.*]

For $10.50, THE LIVING AGE and any one of the *four-dollar* monthly magazines (or *Harper's Weekly* or *Bazar*) will be sent for a year, with postage prepaid on both; or, for $9.50, THE LIVING AGE and the *St. Nicholas* or *Scribner's Magazine,* postpaid.

Specimen Pages will be sent on Application.

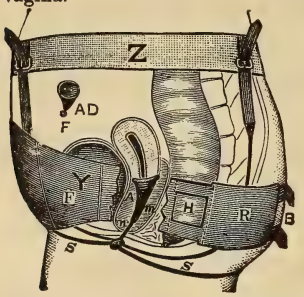
STAUFER'S

UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S). One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in diameter, the difference from one size to another being $\frac{1}{8}$ inch. The size most frequently used is $1\frac{3}{4}$ inches across the cup.

SELECTION In ordering, give exact measure around the hips, just below crest of ilium, and the width of cup on top, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE

The instrument complete, with belt Z, costs	$4.00
" " " " " Y, "	5.00

An Important Communication
TO PHYSICIANS.

Thirteen years have now elapsed since the introduction of SCOTT'S EMULSION of PURE NORWEGIAN COD LIVER OIL with HYPOPHOSPHITES of LIME and SODA, since which time its growth and development have been very large, not only in this country but in South America, Great Britain and a large part of Continental Europe, and it has, in a very large degree, supplanted the Plain Cod Liver Oil. Its success is largely due to the happy combination of all its components, making a perfect chemical union, that will not separate for years, which we believe is not true of any other Cod Liver Oil preparation.

The innumerable reports from Physicians, of the brilliant results obtained justifies the statement that in almost every case where Cod Liver Oil is indicated, Scott's Emulsion is infinitely superior.

Physicians who have never tried this Emulsion, or who have been induced to try something else in its stead, will do us the favor to send for sample, and we know they will always use it in preference to plain Cod Liver Oil or any other preparation.

We also call your attention to the following preparations:

CHERRY-MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula.)

Prepared from carefully selected German Buckthorn Bark, Juglans Bark, and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

Four Books Learned in One Reading.
A Year's Work Done in Ten Days.

[From the Chaplain of Exeter College, and Houghton Syriac Prizeman, Oxford.]

COLL. EXON. OXON., Sept., 1888.

DEAR SIR: In April, 1885, while thinking of taking orders in September, I suddenly received notice that my ordination examination would be held in a fortnight. I had only *ten* (10) days in which to prepare for the Exam. I should recommend a *year's* preparation in the case of anyone so utterly unprepared as I was; but your *System had so strengthened my natural memory*, that I was able to remember and give the gist of any *book after reading it once.* I therefore *read* Lightfoot, Proctor, Harold Browne, Mosheim, &c., &c., *once*, and was *successful* in *every one* of the *nine* papers. The present Bishop of Edinburg knows the facts.

Faithfully yours,
[REV.] JAMES MIDDLETON MACDONALD, [M.A.]

To Prof. A. Loisette, 237 Fifth Ave., New York.

Perfectly taught by correspondence. Send for prospectus.

COLDEN'S LIQUID BEEF TONIC.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in the Treatment of all Cases of Debility.

☞ ESTABLISHED 15 YEARS. ☞ ENDORSED BY SCORES OF PHYSICIANS. ☞ BEWARE OF IMITATIONS.

☞ ESSENTIALLY DIFFERENT FROM ALL OTHER BEEF TONICS.

COLDEN'S LIQUID BEEF TONIC consists of the Extract of Beef (by Baron Liebig's process), spirit rendered non-injurious to the most delicate stomach by extraction of Fusel Oil, Soluble Citrate of Iron, Cinchona, Gentian, and simple aromatics. An official analysis of this preparation by the eminent chemist, ARTHUR HILL HASSALL, M.D., F.R.S., and an endorsement of by Sir ERASMUS WILSON, F.R.S., is printed on the label of each bottle.

In the treatment of all cases of Debility, Convalescence from severe illness, Anæmia, Malarial Fever, Chlorosis, Incipient Consumption, Lack of Nerve Tone, and of the Alcohol and Opium Habits, and all maladies requiring a Tonic Nutrient, it is superior to all other preparations.

It acts directly on the sentient gastric nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement, an appetite.—By the urgent request of several eminent members of the medical profession, I have added to each wineglassful of this preparation two grains of SOLUBLE CITRATE OF IRON, and which is designated on the label WITH IRON, "No. 1;" while the same preparation, WITHOUT IRON, is designated on the label as "No. 2."

☞ *I will, upon application, send a sample bottle of* COLDEN'S LIQUID BEEF TONIC *to any physician in regular standing. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation physicians should be particular to mention* "COLDEN'S," *viz.,* "EXT. CARNIS FL. COMP. (COLDEN)." *It is put up in pint bottles, and* CAN BE HAD OF WHOLESALE AND RETAIL DRUGGISTS GENERALLY THROUGHOUT THE UNITED STATES.

C. N. CRITTENTON, Sole Agent, 115 Fulton Street, New York.

GLENN'S SULPHUR SOAP.

All physicians know the great value of the local use of Sulphur in the TREATMENT OF DISEASES OF THE SKIN. GLENN'S SULPHUR SOAP is the ORIGINAL and BEST combination of its kind, and the one now generally used. For sale by all Druggists at 25 cents a cake, or three cakes for 60 cents. Beware of counterfeits.

CONSTANTINE'S PINE TAR SOAP.

BY FAR THE BEST TAR SOAP MADE. Has been on trial among physicians for very many years as a toilet soap and healing agent, and its superior virtues have been unanimously conceded in ALL CASES WHERE THE USE OF TAR IS INDICATED.

Unsolicited expressions of its excellence have been received from the Medical Faculty generally. None genuine unless stamped "A. A. Constantine's Persian Healing Pine Tar Soap." For sale by all Druggists.

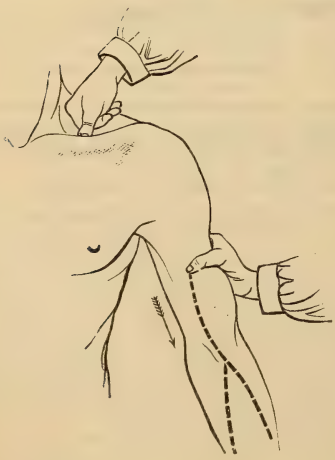
Wholesale Depot, C. N. CRITTENTON, 115 Fulton Street, New York.

Please mention this Journal. ☞ Samples of above Soaps SENT FREE on application to any physician enclosing card.

THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES, M.D.



"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

Sent on receipt of 75 Cents.

ADDRESS: Medical and Surgical Reporter,
P.O. Box 843. PHILADELPHIA, PA.

ANOTHER STRANGE THING.

---o---

Of all the new editions of well known Physicians' Visiting Lists which we have seen this year, not one but looks poorer and meaner than it did a year ago!

Why should this be? There is not much profit in these books; but it does not seem good policy to try to make it bigger by making the book poorer. At least we think so here; and so the POCKET RECORD which has been issued from this office for TWENTY THREE YEARS will be issued this year better than it ever was before. All the old, and approved features are retained, and some new ones are introduced. Special attention has been paid to the paper, printing, and binding, and the Spring Clasp--which has been such a favorite---is retained. This edition is also printed with dates, instead of without them---as in previous years. This, because it is clear that the great mass of physicians prefer books with dates. Our subscribers will be safe in ordering, and let them do it now.

Pocket Record for 30 Patients a week, - - - - - $1.00

Send Check or Postal Note.

TO EACH SUBSCRIBER.

---o---

Dear Doctor:

I beg your co-operation in endeavoring to get all the subscribers to the MEDICAL AND SURGICAL REPORTER to cordially accept the conditions usual with first-class periodicals, that is, that subscriptions shall be paid in advance. There are some of our subscribers who still have accounts unsettled for the year 1888, and they are urged to pay the amount due for this year as soon as possible, so as to make it easier for them when next year begins to pay for that year in advance. The evidences of approval of the REPORTER by medical men are multiplying. The subscription list is growing larger, and it is hoped that all who are now subscribers will long continue their patronage, and that they will heartily support the publisher in endeavoring to maintain those principles of business which experience shows to be best for all, not only for the publishers but for also the subscribers.

Some may think it is kind to allow subscribers to run in debt, but it is not, and it is not fair to those who pay promptly, either;

SO SEND WHAT YOU OWE, SOON.

N.B.--If you add next year's subscription money, so much the better.

Make all checks or money-orders payable to

CHARLES W. DULLES.

Address,

P.O.Box 843, Philadelphia.

ARTIFICIAL LEGS and ARMS

WITH RUBBER HANDS AND FEET.

MARKS' PATENTS.

Over 8,000 in actual use throughout the civilized world. The use of rubber hands and feet on artificial limbs simplifies the construction so that limbs can be worn by the crippled for many years without requiring repairs. Men engaged in every conceivable occupation operate on rubber feet or use their rubber hands to great advantage.

MR. A. A. MARKS: MAMARONECK, N. Y., Dec. 21, 1887.

DEAR SIR: Over twelve years ago I met with the misfortune of having both my legs crushed by the railroad cars, which necessitated amputation below the knees. By the advice of my surgeons I placed myself under your care for restoration. Your reputation as the one most competent in the land had so impressed me that I felt I was soon to realize the most that skill and ingenuity could devise.

I well remember how proud I was when your genius placed me in a position in which I could indulge in youthful sports, how I availed myself of every advantage, playing ball, boating, fishing, and hunting in summer, and skating in winter.

I became quite an expert on the skates and relished the applause my antics on the ice would excite. My obligations to the pair you made for me placed me in a position to feel a sense of duty to put them to the severest test and boast of my accomplishments.

For this reason I have indulged in many sports which really belong to the sound and rugged. My latest prank is that of riding a bicycle. I found the task considerable at first, but being determined, I succeeded after repeated attempts, to ride tolerably well.

I shall only be too happy to commend your rubber feet, and will do all I can to encourage their sale. JAMES McDONALD.

By a copyright formula furnished by us on request, applicants can supply us with all the data necessary to secure fit and satisfactory results while they remain at home. One half the legs and arms furnished by us are made from measurements and profiles without our seeing the wearer. This new method is a great convenience for those living at a distance. Fit always guaranteed.

A treatise of 400 pages and 190 illustrations and nearly a thousand endorsements and testimonals sent to those needing artificial legs or arms, who will give a description of their case. The same will be sent to physicians and surgeons free of charge. Address,

A. A. MARKS, 701 BROADWAY, NEW YORK CITY.

The highest awards received at every exhibition. Endorsed by the United States Government, and commissioned by the Surgeon-General of the United States Army to supply limbs to pensioners of the United States.

TAKE NOTICE

The supply of POCKET RECORDS offered for sale at a reduced price is now SOLD OUT! Hereafter the price will be

Book for 30 Patients a week, with dates or without, $1.00

Book for 60 Patients a week, without dates only, $1.25

MEDICAL AND SURGICAL REPORTER

P. O. Box 843 PHILADELPHIA

THE NEW HYPNOTIC

SULFONAL-BAYER

MANUFACTURED BY THE

FARBENFABRIKEN formerly FRIEDR. BAYER & CO.

ELBERFELD.

SULFONAL was first discovered by Prof. E. Baumann of the University at Freiburg; its physiological actions and clinical uses were first examined by Prof. Kast, who is also a member of the medical faculty at Freiburg University.

SULFONAL has been found to be a reliable hypnotic which has none of the peculiar effects of the narcotics on the nervous and circulatory systems. It has no injurious secondary effects, and may be taken in the proper doses with impunity in order to produce natural, quiet sleep.

It has another great advantage which is of considerable practical importance, viz: Its absolute freedom from taste and odor.

This new hypnotic has been tried quite extensively during the last twelve months and very favorable results are reported by various observers.

It is important that the druggist sees that the article he uses is labeled "Sulfonal-Bayer, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld; W. H. Schieffelin & Co., New York, sole licensees and sole agents for the United States." This is furnished in a state of absolute purity, which has been found to be indispensable in order to obtain certain and undisturbed action. The manufacturers have provided means for the continual examination of their product by the most competent authorities, not only as regards its chemical purity, but also with reference to its medicinal activity.

We have in preparation a pamphlet on *Sulfonal-Bayer* which we will mail to applicants when published.

We offer *Sulfonal-Bayer* in half ounce and one ounce bottles, or in the form of tablets, containing 15 grains each, put up in tubes of 10 tablets.

W. H. SCHIEFFELIN & CO.

170 and 172 William St., New York.

A NEW USE

FOR

Liquid Peptonoids.

Successfully used in Dissolving the False Membrane in Diphtheria.

A Physician writes: "In an experience of over thirty years I have never used anything to equal your LIQUID PEPTONOIDS as a local application with a spray. It will dissolve the membrane and destroy the diphtheritic odor in less than twenty-four hours. I use the LIQUID PEPTONOIDS full strength as a spray, two or three times a day, in bad cases."

Used successfully by another physician in two desperate cases:

"I was induced to try LIQUID PEPTONOIDS in two very desperate cases of DIPHTHERIA. I think I never saw throats more heavily coated with exudate than were these, and I think I never saw it more rapidly disappear than in these cases, by frequent spraying with your LIQUID PEPTONOIDS."

LIQUID PEPTONOIDS can be taken by patients unable to ingest food in any other form. In *Dyspepsia* and *loss of appetite* its effects are positive, its digestive properties assisting in the digestion of food taken and its peptogenic properties quickly stimulating the natural digestive secretions of the stomach.

Pancrobilin.

Prepared (in both Liquid and Pill form) from Extract of Pancreas and Bile.

This preparation is designed expressly to increase the digestion and absorption of fats.

We believe that the fat-digesting properties of pancreatine and bile are inseparable, and that without their union in the intestinal tract but little, if any, fat would be digested and absorbed.

PANCROBILIN will be found of great service in *Phthisis and other wasting diseases, Nervous Prostration, Constipation, Inanition, Malnutrition, Intestinal Indigestion,* and wherever there is a failure to assimilate fats.

If the skin is first wet with LIQUID PANCROBILIN, the inunction of oils will be greatly facilitated.

LIQUID PANCROBILIN is put up in pound bottles.

PILL PANCROBILIN is put up in bottles holding 100 pills. The coating of the pills will resist acid digestion when given as directed, but will be quickly dissolved in the alkaline secretions of the duodenum.

Phospho-Caffein Comp.

(*Granular Effervescing.*)

Formula for each dessertspoonful:—

Caffein.
Acidi Phosphorici, ää, gr. ss.
Antipyrin.
Ext. Apii. Grav. dulc. (*Celery*), *ää gr. j.*
Sodii Bromidi, gr. v.

The satisfactory results produced by PHOSPHO-CAFFEIN COMP. in *Headaches, Neuralgia, Insomnia, Neurasthenia, and general Nervous Irritability,* are not due to the effect of any one ingredient, but to the happy effect of the combination. A thorough series of comparative tests have demonstrated the superiority of the above formula over any other in the market.

REED & CARNRICK, New York.

THERE IS A PEPSIN

WHICH IS UNIFORMLY ACTIVE, PERMANENT, AND RELIABLE,

IT IS "FAIRCHILD'S."

This Pepsin will not spoil, will not become soft and sticky in the vial, even if left long uncorked.

Fairchild's Pepsin will not "gum up" if dispensed in powders, plain, or with the drugs usually combined with pepsin.

Fairchild's is not a partial peptone, and has none of the well-known characteristics of peptone.

Fairchild's is the pioneer pepsin, it showed the way. It "got there" early.

Its activity has never been exaggerated.

All this time, whilst other manufacturers were still offering the high-dilution saccharated and amylated article, Fairchild's Pepsin was steadily making its way on its merit. Now, no one ventures to ask a hearing for these *placebo-pepsins.*

When physicians now prescribe "pepsin" they mean pepsin—not milk sugar, and pepsin.

All these years, Fairchild's Pepsin was always and everywhere found to do just what was claimed for it—in spite of the attitude, genuine or assumed, which held that all "claims" about pepsin must be taken with a liberal discount.

Every *bona fide* test demonstrated its reliability.

We have never found it necessary to explain or excuse any deficiency or inaction as due to "deteriorated" specimens.

Fairchild's will not disappoint the prescriber under any condition proper for pepsin.

With Such a Record Fairchild's Pepsin is a good one to stand by.

Clinical and practical instruction in the medical and surgical specialties is afforded to physicians only, during the entire year. The College has well-fitted laboratories of pathology, miscroscopy, anatomy, surgery, and electro-therapeutics.

In addition to the clinical facilities of the dispensary, the professors utilize, for purposes of instruction, their services in the Philadelphia, Pennsylvania, Wills, Howard, Episcopal, Presbyterian, German, St. Mary's and, St. Christopher's Hospitals.

The Fee for each branch, for six consecutive weeks from date of issue, is $15.00. Any number of branches may be taken. General Ticket for the thirteen clinical courses, for six consecutive weeks, $100.00. Ticket for Summer course, from July 2d to September 15th, $60.00. One month, Summer course, $25.00. One branch, Summer course, $10.00.

At the College Building, N. W. Cor. Broad and Lombard Streets, Philadelphia.

ANOTHER STRANGE THING.

---o---

Of all the new editions of well known Physicians' Visiting Lists which we have seen this year, not one but looks poorer and meaner than it did a year ago!

Why should this be? There is not much profit in these books; but it does not seem good policy to try to make it bigger by making the book poorer. At least we think so here; and so the POCKET RECORD which has been issued from this office for TWENTY THREE YEARS will be issued this year better than it ever was before. All the old, and approved features are retained, and some new ones are introduced. Special attention has been paid to the paper, printing, and binding, and the Spring Clasp--which has been such a favorite---is retained. The 30 Patient books are printed with dates, or without them. This, because it is clear that many physicians prefer books with dates. Our subscribers will be safe in ordering, and let them do it now.

PRICE.

Pocket Record for 30 Patients a week, - - - - - $1.00

TO EACH SUBSCRIBER.

---o---

Dear Doctor:

I beg your co-operation in endeavoring to get all the subscribers to the MEDICAL AND SURGICAL REPORTER to cordially accept a condition usual with first-class periodicals, that is, that subscriptions shall be paid in advance. There are some of our subscribers who still have accounts unsettled for the year 1888, and they are urged to pay the amount due for this year as soon as possible, so as to make it easier for them when next year begins to pay for that year in advance. The evidences of approval of the REPORTER by medical men are multiplying. The subscription list is growing larger, and it is hoped that all who are now subscribers will long continue their patronage, and that they will heartily support the publisher in endeavoring to maintain those principles of business which experience shows to be best for all, not only for the publishers but for also the subscribers.

Some may think it is kind to allow subscribers to run in debt, but it is not, and it is not fair to those who pay promptly, either;

SO SEND WHAT YOU OWE, SOON.

N.B.--If you add next year's subscription money, so much the better.

Make all checks or money-orders payable to

CHARLES W. DULLES.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

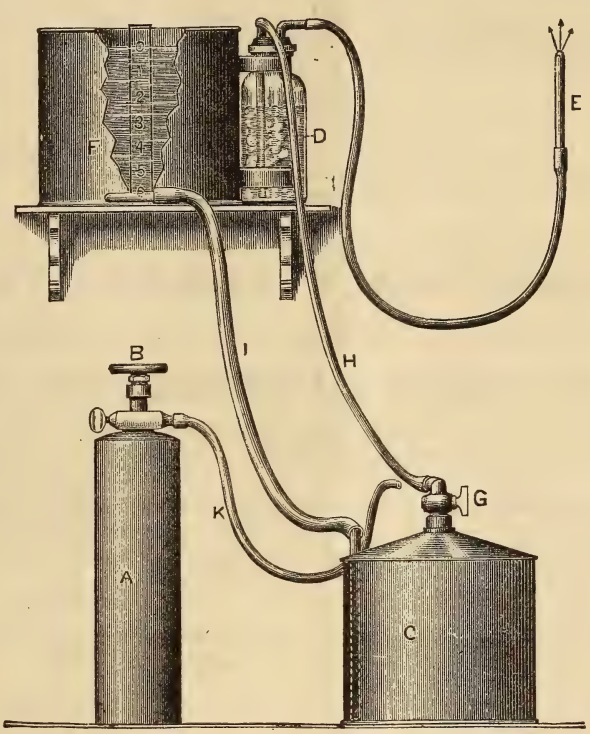
PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

An Important Communication
TO PHYSICIANS.

Thirteen years have now elapsed since the introduction of SCOTT'S EMULSION of PURE NORWEGIAN COD LIVER OIL with HYPOPHOSPHITES of LIME and SODA, since which time its growth and development have been very large, not only in this country but in South America, Great Britain and a large part of Continental Europe, and it has, in a very large degree, supplanted the Plain Cod Liver Oil. Its success is largely due to the happy combination of all its components, making a perfect chemical union, that will not separate for years, which we believe is not true of any other Cod Liver Oil preparation.

The innumerable reports from Physicians, of the brilliant results obtained justifies the statement that in almost every case where Cod Liver Oil is indicated, Scott's Emulsion is infinitely superior.

Physicians who have never tried this Emulsion, or who have been induced to try something else in its stead, will do us the favor to send for sample, and we know they will always use it in preference to plain Cod Liver Oil or any other preparation.

We also call your attention to the following preparations:

CHERRY-MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula.)

Prepared from carefully selected German Buckthorn Bark, Juglans Bark, and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

LOISETTE, 237 Fifth Ave., New York

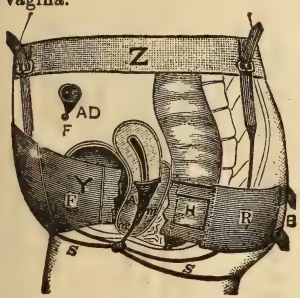
STAUFER'S

UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S). One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from 1¼ inches to 2¼ inches in diameter, the difference from one size to another being ⅛ inch. The size most frequently used is 1¾ inches across the cup.

SELECTION In ordering, give exact measure around the hips, just below crest of ilium, and the width of cup on top, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE

The instrument complete, with belt Z, costs $4.00
" " " " " Y, " 5.00

SEND MONEY WITH ORDER.

Handsomely ruled in red and blue, and printed in black, on fine ledger paper. Bound in black cloth, with leather back and corners. OPENS OUT FLAT. 300 pages and index. Space for over 2000 accounts. A copy will be sent to any address on receipt of price, and, if it is not approved when seen, the money will be refunded upon return of the book and cost of transportation one way.

PRICE - $4.00.

Address, MEDICAL AND SURGICAL REPORTER.

P.O. Box 843, Philadelphia.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

Prepared from the Aletris Farinosa or True Unicorn and Aromatics.

INDICATIONS.

Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to Prevent Miscarriage, Etc.

DOSE :—ONE TEASPOONFUL THREE OR FOUR TIMES A DAY.

UNRIVALED AS A UTERINE TONIC IN IRREGULAR, PAINFUL, SUPPRESSED AND EXCESSIVE MENSTRUATION.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

☞Where women have miscarried during previous pregnancies, or in any case where miscarriage is feared, the ALETRIS CORDIAL is indicated, and should be continuously administered during entire gestation.

CHAS. CLAY, M. R. C. S., Manor House, Dewsbury, England, says:—I find Aletris Cordial (Rio) is of great service in threatened miscarriage.

FRANCIS E. CANE, L. R. C. S., &c., Leeds, England, says:—I have tried the Aletris Cordial (Rio) in two cases of long standing dysmenorrhea, with excellent results. One of these patients has spent a week in bed every month for two years. After all the usual remedies, I put her on Aletris Cordial, and for the last two periods she has been out and about all the time.

L. M. WATSON, M. D., Delhi, Ills., says:—I have used Aletris Cordial (Rio) in cases of dysmenorrhea. suppressed menses and threatened miscarriage, and also, combined with Celerina, as a tonic after confinement, with the happiest results, and now I am using it on a case of leucorrhea, with injections of S. H. Kennedy's Extract of Pinus Canadensis, and it is acting like a charm.

P. H. OWEN, M. D., Morganville, Ala., says:—I have prescribed Aletris Cordial (Rio) in several cases with the most satisfactory results, and regard it as the best uterine tonic I have met with in a professional experience of over twenty-five years. In cases of threatened miscarriage it acts like a charm. Would recommend its continuous administration in all cases when there is any indication of miscarriage.

Dr. W. BERTHELOT, Santander, Spain, says:—I have tried the Aletris Cordial (Rio), and it has seemed to me to be useful, especially in cases of dysmenorrhea.

Dr. RASQUINET, Jupile, near Liege, Belgium, says:—I tried Aletris Cordial (Rio) in the case of a woman who had had several miscarriages at the end of five months, and who is now again pregnant, having reached the seventh month: thanks to Aletris Cordial.

R. REECE, M. R. C. S., Walton-on-Thames, England, says:—Aletris Cordial (Rio) in painful menstruation is most valuable. A wife of a minister suffered much, and had had three miscarriages. I prescribed Aletris Cordial. She has for the first time, gone her full time, and was safely confined with a male child.

J. T. COLLIER, M. D., Brooks, Me., says:—I have used your Aletris Cordial (Rio) in cases of females at the menopause. Consider it one of the finest remedies for these cases.

Dr. GORDILLON, St. Amand, France, says: I have tried the Aletris Cordial (Rio) in a case of dysmenorrhea. The result I obtained from the use of your preparation was excellent, better than I had obtained in the same patient by prescribing the usual remedies employed in such cases.

W. F. TOOMBS, M. D., Morrillton, Ark., says:—I have used a great deal of your Aletris Cordial (Rio) and I find it all you claim for it in amenorrhea, dysmenorrhea, metritis, leucorrhea; I don't think it has an equal. I have used it in two cases of threatened miscarriage and the trouble was obviated. For a general Uterine Tonic I know of nothing superior.

R. D. PATTERSON, L. R. C. S. &c., Medical Officer, Caledon Dispensary, Co. Tyrone, Ireland, says:—I have very great pleasure in testifying to the very high opinion I hold of Aletris Cordial (Rio) in threatened miscarriage.

BUFFALO LITHIA WATER

IN THE

Uric Acid Diathesis, Bright's Disease of the Kidneys, Chronic Inflammation of the Bladder, &c.

Dr. THOMAS H. BUCKLER, of Paris (formerly of Baltimore), SUGGESTER OF LITHIA as a Solvent for URIC ACID.

"Nothing I could say would add to the **WELL-KNOWN REPUTATION OF THE BUFFALO LITHIA WATER. I HAVE FREQUENTLY USED IT WITH GOOD RESULTS IN URIC ACID DIATHESIS, RHEUMATISM AND GOUT,** and with this object I have ordered it to Europe from Coleman & Rogers, of Baltimore. Lithia is in no form so valuable as where it exists in the Carbonate (the form in which it is found in the **BUFFALO LITHIA WATER**), Nature's mode of solution and division in water which has passed through Lepedolite and Spondumine Mineral formation."

Dr. WM. A. HAMMOND, of New York, Surgeon-General U. S. Army (Retired), Professor of Diseases of the Mind and Nervous System in the University of New York, &c.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the **NERVOUS SYSTEM,** complicated with **BRIGHT'S DISEASE OF THE KIDNEYS** or with a **GOUTY DIATHESIS.** The results have been eminently satisfactory. Lithia has for many years been a favorite remedy with me in like cases, but the **BUFFALO WATER CERTAINLY ACTS BETTER THAN ANY EXTEMPORANEOUS SOLUTION OF THE LITHIA SALTS,** and is, moreover, better borne by the Stomach. I also often prescribe it in those cases of **CEREBRAL HYPERÆMIA** resulting from over-mental work—in which the condition called **NERVOUS DYSPEPSIA EXISTS**—and generally with marked benefit."

HUNTER McGUIRE, M.D., LL.D., Late Professor of Surgery, Medical College of Virginia, Richmond.

"**BUFFALO LITHIA WATER,** *Spring No. 2,* as an **ALKALINE DIURETIC,** *is invaluable.* In **URIC ACID GRAVEL,** *and, indeed,* in *diseases generally dependent* upon a **URIC ACID DIATHESIS,** *it is a remedy of extraordinary potency.* I have prescribed it in cases of **RHEUMATIC GOUT,** *which had resisted the ordinary remedies, with wonderful good results.* I have *used it also in my own case, being a great sufferer from this malady, and have derived more benefit from it than from any other remedy.*"

Dr. ROBERT BATTEY, of Georgia, SUGGESTER OF BATTEY'S OPERATION.

"I would state that I have been using the Buffalo Lithia Water, No. 2, in my practice for three years past, in cases of **CHRONIC INFLAMMATION** of the **BLADDER,** whether induced by **STONE,** by enlarged **PROSTATE** in the aged, or by **NEGLECTED GONORRHŒA, AND HAVE SECURED EXCELLENT RESULTS,** which encourages me to prescribe it for the future."

Dr. CYRUS EDSON, of New York,
Chief Inspector of Cutaneous Diseases in Health Department and President of the Board of Pharmacy.

"I have frequently made use of **BUFFALO LITHIA WATER,** Spring No. 2, in my practice, *with excellent results.* It is a potent remedy in correcting **RHEUMATIC DIATHESIS.** In a case of **URIC ACID GRAVEL,** in which I recently prescribed it, **ITS BENEFICIAL EFFECTS WERE APPARENT AFTER THE THIRD DOSE.** I have also prescribed it with great benefit in **BRIGHT'S DISEASE OF THE KIDNEYS.**"

Water in Cases of one dozen half-gallon Bottles, Five Dollars per Case, at the Springs.

THOMAS F. GOODE,

PROPRIETOR,

BUFFALO LITHIA SPRINGS,

VIRGINIA.

COMPRESSED TABLETS.

WE ask the attention of Physicians to the annexed list of recent additions of Compressed Tablets, as we think all of them are well deserving the careful attention of practitioners. We would be pleased to send to any physician, circular matter, compiled with great care and accuracy, giving therapeutic value and results in a concise form, that we are confident will be of interest, and possibly of advantage, to medical men who have not yet had access to the foreign and home authorities from which we have culled the information we give.

Acid Boracic, ... 5 grs.
Acetanilide, ... 3 and 5 "
Antifebrin, ... 3 " 5 "
Antipyrine, ... 3, 5 " 10 "
Blaud's
Ferri. Sulph. Exsic., 2 grs., Potass. Carb., 1 4-5 grs., Sacch. Alb., 1⅔ grs.
Iodol. . . . . ½, 1, 2, 3, and 5 grs.
Manganese Binoxide, ... 1 " 2 "
Opium, Camphor and Carb. Ammon., Opium Denarcot. ½ gr., Camphor, 2 grs., Ammon. Carb., 2½ grs.
Quinia Tannate, and Chocolate 1 grain, Quiniæ Tannat. 1 gr., Ext. Cacao, 9 grs.
Quinia Tannate and Chocolate, 2½ grs., Quiniæ Tannat. 2½ grs., Ext. Cacao, 7½ grs.
Salol, ... 2½ and 5 grs.
Sodium Succinate, ... 2 " 5 "
Thalline Sulphate, ... 2, 3 " 5 "
Trinitrin (Nitro-Glycerin), 1-20, 1-25, 1-33, 1-50, 1-100, and 1-200 gr.
Terpin Hydrate, ... 2, 3 and 5 grs.

ANTISEPTIC TABLETS.

7.7 Hydrarg. Chlor. Corros., 7.3 Ammonium Chloride.

More than six months since, we sent a circular to the drug trade, stating that we had discontinued the manufacture of the Antiseptic Tablets introduced by us several years since at the suggestion of Dr. Charles Meigs Wilson, of this city. We have, however, received so many letters from physicians urging us to resume the manufacture, insisting that the Tablets prepared by us dissolved more readily and were more satisfactory than any substitute they had been able to procure, that we feel we could not ignore such persistent demands from our medical friends who have found our tablets an absolute necessity. We have therefore concluded to again prepare them, in a building entirely separate from our main establishment, with appliances and admirably devised protection by means of improved respirators, that will completely overcome any harmful effects to those engaged in their manufacture.

Druggists and physicians will be glad to learn that the Tablets as now prepared are perfectly white and free from the coloring-matter that we formerly added. This was done to lessen the danger of their being taken, or used in mistake; to guard against any such possibility, each Tablet, as now made, has the word "POISON" stamped upon it.

JOHN WYETH & BROTHER,

CHEMISTS, PHILADELPHIA.

Before you begin the New Year

think how much time you have spent in this year over your accounts, and what a bother it has been to make out your bills!

Now one of the great merits of

The Model Ledger

is that it enables a physician to make out his bills with great ease. Beside this, it tells at a glance just how much he has earned in any quarter; how much he has received; and how much is still due him. These are all good things for a doctor to know.

Specimen Pages will be sent on Application.

BUFFALO LITHIA WATER

IN THE TREATMENT OF CHRONIC GASTRIC CATARRH

CLINICAL REPORTS.

CHRONIC GASTRIC CATARRH AND URIC ACID CALCULI.

A case stated by Dr. JNO. C. COLEMAN, of Scottsburg, Va., a retired Surgeon of the U. S. Navy.

"Mr. C. was for a number of years a sufferer from **CHRONIC GASTRIC CATARRH.** While his diet *was exclusively* **TEA** and **CRACKERS, BREAD** and **MILK,** *and other similar articles,* it was frequently thrown off in an undigested state soon after taking it, and at times he discharged from an empty stomach a strongly acid glairy mucus. A marked **URIC ACID DIATHESIS** supervened, consequent upon which he suffered for a period of some two years great **VESICAL IRRITATION** and possible **CYSTITIS,** attended by pain so intense and constantly present, as to require that he should be kept for the most part under the influence of opiates. After a persistent, but ineffectual exhibition of all remedies supposed to be indicated in the case, he was put for the latter affection upon the **BUFFALO LITHIA WATER,** Spring No. 2, with the happiest possible effect.

"In a few weeks, after commencing the use of it, the irritable condition of the *Bladder* was so far relieved that he was enabled to dispense entirely with the use of opiates. At the expiration of some eight weeks he had an attack of unusual severity, from which he was relieved by the discharge of a **CALCULUS,** followed at short intervals by the discharge of three others, which proved to be the termination of this trouble, as from that time there was entire subsidence of the painful symptoms described, and the *Bladder* resumed its natural state.

"While prescribed with special reference to the relief of the *Irritable Bladder*, the action of the water was not less surprisingly happy in the **GASTRIC AFFECTION,** with remarkable promptness correcting the highly acid condition of the **STOMACH,** restoring a healthy digestion and assimilation, and *tone* and *vigor* to the depressed *Nervous System.*

"In a few months he was able to eat, with perfect impunity, the coarsest articles of diet. He is now, after a lapse of several years, in robust health, having had no return of these painful maladies."

CHRONIC GASTRIC CATARRH.

Case of JOHN P. KEELING, Esq., stated by Dr. S. S. KEELING, Norfolk, Va., Member Medical Society of Virginia.

"Mr. John P. Keeling labored under **CHRONIC DYSPEPSIA,** and was always subject to attacks of *Spasmodic Gastralgia* immediately upon taking food into the stomach, which attacks were not at all amenable to treatment. Not unfrequently the stomach *rejected everything in the way of food and drink,* and he was of necessity confined to the lightest possible articles of diet, *meat and vegetables being entirely excluded.* He became so prostrated that it was with difficulty he could walk across his chamber floor, and had often to be lifted about. Such was the state of his **NERVOUS SYSTEM** *that great solicitude was felt as to his mental condition.*

"He visited Baltimore for medical aid, and was for many months under the treatment of some of the most eminent men of the profession in that city, but without beneficial result, and was finally advised that he had nothing to hope from remedies.

"Returning in an extremely critical condition to his home in the county of Princess Anne, he came under my professional care. Satisfied that medicine was unavailing in the case, I advised the **BUFFALO LITHIA WATER,** Spring No. 2. His stomach, however, was in a highly irritable condition, and I found it necessary to administer it in very small quantities; and it was at first given not exceeding an ounce at a dose, repeated at stated intervals. At the expiration of the third day the irritability of the stomach was decidedly less, and the quantity was then increased from day to day until the thirteenth day, when I found that the patient could take twelve ounces, which I regard as maximum dose at any time. Persisting in its use, on the twenty-eighth day he was free from pain, the stomach in a normal condition readily receiving both solids and liquids in moderate quantities, strength greatly increased, and nervous symptoms entirely relieved. At the expiration of the seventh week he was able to attend actively and regularly to his business on the farm. His recovery, which I regard as one of the most remarkable I ever knew of, I attribute entirely to the **BUFFALO LITHIA WATER."**

GASTRO-INTESTINAL CATARRH.

Case of Mrs. Dr. F. J. GREGORY, of Virginia, reported by F. J. GREGORY, M.D., Keysville, Va.

"For eighteen months my wife, aged forty-one years, was a sufferer from a **GASTRO-INTESTINAL CATARRH,** which resisted my best-directed efforts at relief. The taking of the smallest quantity of the most easily-digested food on the stomach would produce an attack of *nausea and vomiting, the severity of which is seldom witnessed,* and when the stomach was free of food she would have attacks of *Gastralgia of the most excruciating nature.* She also suffered from habitual constipation, and at times with hemorrhages from the bowels. I pursued the usual line of treatment, such as simple bitters, Dilute Hydrocyanic Acid, Bismuth, etc., and called to my help two of the most skilled physicians in Southside Virginia, who supplemented my treatment with some of the newer drugs, such as **EFFERVESCING BICARB. POTASS. LACTOPEPTINE, CARLSBAD MINERAL SALTS,** etc., but with no benefit, and so her condition went on from bad to worse *until death seemed almost imminent from inanition.* I then put her on a milk diet with a glass of **BUFFALO LITHIA WATER,** Spring No. 2, every hour or so during the day, and *after the use of the first bottle improvement was marked, and before a case of it was used I regarded her cure as complete.* It has been nearly two years since, and there has been only one slight recurrence, which was a few days since, and it readily disappeared on the use of the water for a few days."

Water in cases of one dozen half-gallon bottles, $5 per case, at the Springs.

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

THE NEW HYPNOTIC

SULFONAL-BAYER

MANUFACTURED BY THE

FARBENFABRIKEN formerly FRIEDR. BAYER & CO.

ELBERFELD.

SULFONAL was first discovered by Prof. E. Baumann of the University at Freiburg; its physiological actions and clinical uses were first examined by Prof. Kast, who is also a member of the medical faculty at Freiburg University.

SULFONAL has been found to be a reliable hypnotic which has none of the peculiar effects of the narcotics on the nervous and circulatory systems. It has no injurious secondary effects, and may be taken in the proper doses with impunity in order to produce natural, quiet sleep.

It has another great advantage which is of considerable practical importance, viz: Its absolute freedom from taste and odor.

This new hypnotic has been tried quite extensively during the last twelve months and very favorable results are reported by various observers.

It is important that the druggist sees that the article he uses is labeled "Sulfonal-Bayer, manufactured by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld; W. H. Schieffelin & Co., New York, sole licensees and sole agents for the United States." This is furnished in a state of absolute purity, which has been found to be indispensable in order to obtain certain and undisturbed action. The manufacturers have provided means for the continual examination of their product by the most competent authorities, not only as regards its chemical purity, but also with reference to its medicinal activity.

We have in preparation a pamphlet on *Sulfonal-Bayer* which we will mail to applicants when published.

We offer *Sulfonal-Bayer* in half ounce and one ounce bottles, or in the form of tablets, containing 15 grains each, put up in tubes of 10 tablets.

The Curd of Cow's Milk
Made as Soft and Digestible as that of
Woman's Milk.

"From experiments which I have recently made — and my thanks are due to Prof. Salisbury of the Woman's Medical College, for assistance — it seems that the claim which is made by the advocates of the MELLIN'S FOOD is true, and that the addition of this food to cow's milk does cause it to break up in very small, flaky curds."— *Dr. Chas. Warrington Earle, Professor of Diseases of Children, Woman's Medical College, Professor of Obstetrics, College Physicians and Surgeons, Chicago, in his paper on Infant Feeding, before the American Medical Association, May, 1888.*

Any physician having a case in which he desires to test MELLIN'S FOOD can obtain a sample sufficient for trial, free of all expense, by application.

Doliber-Goodale Co., Boston, Mass.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

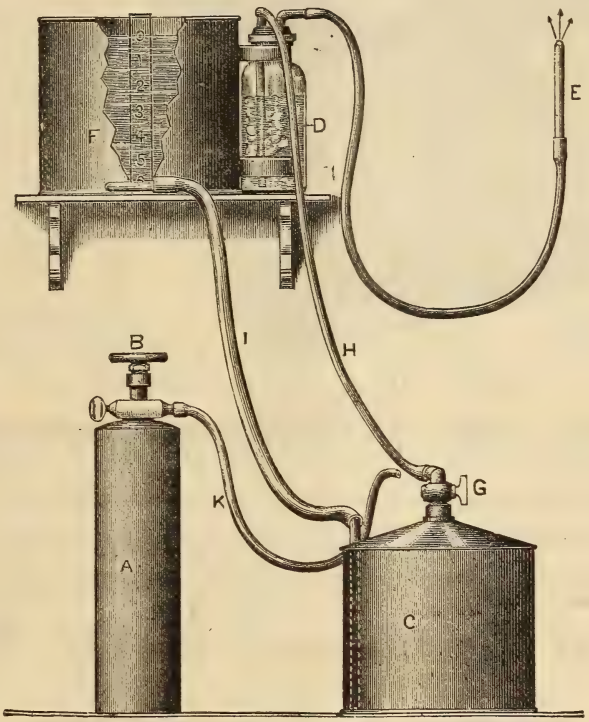
PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

THE S. S. WHITE DENTAL MFG. CO.,

PHILADELPHIA, NEW YORK, BOSTON, CHICAGO, BROOKLYN.

LENTZ'S
NEW COMPACT
OPERATING SET
No. 10.

One Amputating Knife (Leg and Arm). One Finger Knife. One Hernia Knife. One Sharp Curved Bistoury. Two Scalpels. One Tenotome. One Tenaculum. One pair Scissors, curved or flat. One Saw, 9-inch blade. One Liston's Spring Bone Forceps. One Artery and Needle Forceps, improved. One Dressing Forceps. One Esmarch's Flat Rubber Tourniquets, with Chain. One Director. with Aneurism Needle. Two Silver Probes. Silk, Wire, Wax, and Needles.

The above instruments are put up in a fine Morocco Case with nickel trimmings, lined with velvet, and has extra space for Trephine and Elevator, if desired. With the *sixteen* instruments contained in this case, any ordinary operation may be performed.

Size, 11 in. long, 4 in. wide, 2 in. high

Price, $25. With Trephine and Handle and Trephine Elevator in addition, $29.65. We also make the above case with hard rubber antiseptic handles on knives and saw. Price, $29.00. With Trephine and Elevator in addition, $33.65.

Discount 25 pr. ct. to Physicians

Our New Catalogue of 260 pages will be sent on receipt of 10 cents for postage.

CHARLES LENTZ & SONS,
MANUFACTURERS OF
SURGICAL AND ORTHOPÆDIC APPARATUS,
Established 1866. No. 18 North Eleventh Street, Philadelphia.

POSITIVE MEDICATION
WITH POSITIVE AND DECIDED RESULTS, BY THE EMPLOYMENT OF THE
Viburnum Compound of Dr. Hayden
IN
Female Disorders
AND ALL SPASMODIC AFFECTIONS OF BOTH SEXES

TWENTY-TWO YEARS before the profession, without accident or complaint. Absolutely safe and free from all NARCOTICS or poisons—prompt and reliable in its action with no unpleasant sequelæ.

THE VIBURNUM COMPOUND of Dr. Hayden is employed in the leading hospitals and remedial institutions and by the most eminent physicians and gynæcologists with marked success.

We have the testimonials of

FIVE THOUSAND PHYSICIANS

testifying to the great merits of the VIBURNUM COMPOUND of Dr. Hayden—more than were ever given before for any special remedy in the world. Dispensed by all reliable Apothecaries, put up in 4 oz., 10 oz., and 16 oz. bottles.

For formula, report of cases, treatment, special directions, and much other interesting matter, and the written testimonials of

ONE THOUSAND PHYSICIANS

send your address for our eighty-page ILLUSTRATIVE HANDBOOK, FREE.

The New York Pharmaceutical Company
BEDFORD SPRINGS, MASS.

CELERINA

NERVE TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Impotency, Spermatorrhea, Nervous Headache, Neuralgia, Paralysis, Hysteria, Opium Habit, Inebriety, Dyspepsia, and ALL LANGUID conditions of the System.

Indispensable to restore a patient after alcoholic excess.

DOSE.—One or two Teaspoonfuls three or more times a day, as directed by the Physician.

LIQUID IRON-RIO

Palatable and easily assimilated. Does not produce Nausea, nor irritate the Stomach. Does not Cause Headache, nor Constipate. Does not Stain the Teeth. It is so Acceptable to the Stomach that its Use is Admissible when all other forms of Iron would be rejected. Being so Readily Assimilable, it only requires a small Dose.

Each Fluid Drachm contains ONE GRAIN of Iron in a Pleasant and Digestible Form.

DOSE.—One or more Teaspoonfuls as indicated, during or after meals.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS

DARK. A NON-ALCOHOLIC LIQUID. WHITE.

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be used.

RECOMMENDED BY PROMINENT EUROPEAN AND AMERICAN PHYSICIANS.

An Important Communication
TO PHYSICIANS.

Thirteen years have now elapsed since the introduction of SCOTT'S EMULSION of PURE NORWEGIAN COD LIVER OIL with HYPOPHOSPHITES of LIME and SODA, since which time its growth and development have been very large, not only in this country but in South America, Great Britain and a large part of Continental Europe, and it has, in a very large degree, supplanted the Plain Cod Liver Oil. Its success is largely due to the happy combination of all its components, making a perfect chemical union, that will not separate for years, which we believe is not true of any other Cod Liver Oil preparation.

The innumerable reports from Physicians, of the brilliant results obtained justifies the statement that in almost every case where Cod Liver Oil is indicated, Scott's Emulsion is infinitely superior.

Physicians who have never tried this Emulsion, or who have been induced to try something else in its stead, will do us the favor to send for sample, and we know they will always use it in preference to plain Cod Liver Oil or any other preparation.

We also call your attention to the following preparations:

CHERRY-MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula.)

Prepared from carefully selected German Buckthorn Bark, Juglans Bark, and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

SCOTT & BOWNE, 132 South Fifth Ave., New York.

THIRD EDITION.

ACCIDENTS AND EMERGENCIES

By CHARLES W. DULLES, M.D.

"This is the third edition, with revisions and enlargements, of an excellent manual, the practical qualities of which have been proved many times. It is a work that ought to be in every home, and every home that has a copy kept where it can be consulted at short notice is likely to find it worth many times its small cost."—*Philadelphia Evening Telegraph*, May 5, 1888.

"The illustrations are good and sufficiently numerous. The language is simple, being entirely devoid of technicalities, and the methods of treatment recommended are trustworthy and reliable. The manual is one of the best of this class of books and should be in the library of every householder, ready for reference at a moment's notice."—*Science*, May 18, 1888.

Sent on receipt of 75 Cents.

ADDRESS: Medical and Surgical Reporter,

Another Special Notice.

Copies of REPORTER of October 27 and November 3, 1888, are almost exhausted, and none will be sold hereafter except to PAID-UP SUBSCRIBERS.

ANOTHER STRANGE THING.

---o---

Of all the new editions of well known Physicians' Visiting Lists which we have seen this year, not one but looks poorer and meaner than it did a year ago!

Why should this be? There is not much profit in these books; but it does not seem good policy to try to make it bigger by making the book poorer. At least we think so here; and so the POCKET RECORD which has been issued from this office for TWENTY THREE YEARS will be issued this year better than it ever was before. All the old, and approved features are retained, and some new ones are introduced. Special attention has been paid to the paper, printing, and binding, and the Spring Clasp--which has been such a favorite---is retained. The 30 Patient books are printed with dates, or without them. This, because it is clear that many physicians prefer books with dates. Our subscribers will be safe in ordering, and let them do it now.

PRICE.

Pocket Record for 30 Patients a week, - - - - - $1.00

" " " 60 " " without dates only, - - - - - - - - - - - - - - - - - $1.25

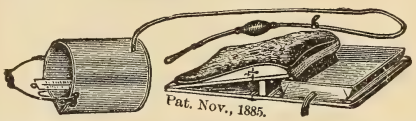
P. O. Box 34. MORRISVILLE, PA.



For more than four years the Perfection Douche has been subjected to the severest practical tests, by experienced gynaecologist in every part of this country, no objection, in a single instance, having been made to the principles upon which it is constructed.

It provides ample and comfortable support, with a slight elevation of either the shoulders or hips, furnishes means for the prolonged application of a sufficiently large amount of hot water, and completely conveys away all the drip without risk of wetting the clothing. No other apparatus for applying hot water in the treatment of uterine and pelvic diseases combines as many desirable and practical qualities. COMFORT, CONVENIENCE, DURABILITY, AND THOROUGHNESS OF APPLICATION are its main points of excellence.

Descriptive circulars, prices, and testimonials are furnished on application. These afford satisfactory evidence of unqualified endorsement of its superior advantages, and show the high appreciation in which the instrument is held by those who have repeatedly recommended and tested its work.

Applications for the Douche or for circulars or testimonials may be made to agents, or to "THE PERFECTION DOUCHE," BOX 7, ALBANY, N. Y.

DETROIT COLLEGE OF MEDICINE.

SESSION 1888-89.

Clinical and Practical teaching are made an important feature of this College. Clinical instruction is given daily at HARPER, ST. MARY'S, and ST. LUKE'S HOSPITAL, at the COLLEGE, at COLLEGE EYE and EAR INFIRMARY, ST. MARY'S FREE EYE and EAR INFIRMARY, and at the three FREE DISPENSARIES. The facilities offered by this college are unsurpassed for the practical study of MEDICINE, SURGERY, OBSTETRICS, GYNÆCOLOGY, DISEASES OF CHILDREN, GENITO-URINARY, and ORTHOPÆDIC SURGERY, OPHTHALMOLOGY and OTOLOGY, DERMATOLOGY and LARYNGOLOGY.

REGULAR SESSION opens on Wednesday, September 26, and continues six months. During the session, the Professors will take special pains to examine the Students upon the subjects of the previous lectures.

SPRING SESSION begins March 27th, 1889, and closes June 17th.

FEES.—Matriculation fee, $5; Fees for Regular Session, $50; Spring Session, $10, to those who attend the regular term—to all others, $25; Hospital Fee, $10; Graduation Fee, $30; Perpetual Ticket, $100.

For further particulars, and for College Circular, apply to

McARTHUR'S SYRUP.

(SYR: HYPOPHOS: COMP: C. P. McARTHUR.)

Its use is indicated in Consumption and Tuberculosis, Diseases of the Chest, Chronic Cough, Throat Affections, General Debility, Brain Exhaustion, Impotence and Loss of Memory.

The point of primary importance in the use of the Hypophosphites is their *chemical* purity, but unfortunately they are too often adulterated.

So little seems to be generally known, even among the medical profession, with regard to the chemistry of the Hypophosphites, and the absolute necessity of CHEMICAL purity, that we call attention to this point.

One of the first effects produced by the use of our CHEMICALLY PURE Hypophosphites is a general increase of nervous energy, with a feeling of ease and comfort.

The second effect is an increase of appetite; digestion is improved, and the bowels become regular in their action, the quantity and color of the blood is increased, respiration is controlled, a better expansion of the chest is observed, cough improves, easy expectoration is produced, night perspiration diminishes, the face becomes fuller, the lips red, the nails and hair grow, and in children the teeth, showing the importance of the Hypophosphites on the organ of nutrition.

☞ Physicians when prescribing will please write thus:

℞ SYR: HYPOPHOS: COMP: McARTHUR. ONE BOTTLE.

As it is made *only for physicians* there are no printed wrappers or advertisements about the bottle.

Our pamphlet on the **CURABILITY AND TREATMENT OF CONSUMPTION,** sent free to physicians upon application.

We will send one bottle of McArthur's Syrup to any physician, without charge, who will pay the express charges on the same.

Mention this Journal. McARTHUR HYPOPHOSPHITE CO., BOSTON, Mass

THERE IS A PEPSIN

WHICH IS UNIFORMLY ACTIVE, PERMANENT, AND RELIABLE,

IT IS "FAIRCHILD'S."

This Pepsin will not spoil, will not become soft and sticky in the vial, even if left long uncorked.

Fairchild's Pepsin will not "gum up" if dispensed in powders, plain, or with the drugs usually combined with pepsin.

Fairchild's is not a partial peptone, and has none of the well-known characteristics of peptone.

Fairchild's is the pioneer pepsin, it showed the way. It "got there" early.

Its activity has never been exaggerated.

All this time, whilst other manufacturers were still offering the high-dilution saccharated and amylated article, Fairchild's Pepsin was steadily making its way on its merit. Now, no one ventures to ask a hearing for these *placebo-pepsins.*

When physicians now prescribe "pepsin" they mean pepsin—not milk sugar, and pepsin.

All these years, Fairchild's Pepsin was always and everywhere found to do just what was claimed for it—in spite of the attitude, genuine or assumed, which held that all "claims" about pepsin must be taken with a liberal discount.

Every *bona fide* test demonstrated its reliability.

We have never found it necessary to explain or excuse any deficiency or inaction as due to "deteriorated" specimens.

Fairchild's will not disappoint the prescriber under any condition proper for pepsin.

With Such a Record Fairchild's Pepsin is a good one to stand by.

Four Books Learned in One Reading.

A Year's Work Done in Ten Days.

[From the Chaplain of Exeter College, and Houghton Syriac Prizeman, Oxford.]

COLL. EXON. OXON., Sept., 1888.

DEAR SIR: In April, 1885, while thinking of taking orders in September, I suddenly received notice that my ordination examination would be held in a fortnight. I had only *ten* (10) days in which to prepare for the Exam. I should recommend a *year's* preparation in the case of anyone so utterly unprepared as I was; but your *System had so strengthened my natural memory*, that I was able to remember and give the gist of any *book after reading it once.* I therefore *read* Lightfoot, Proctor, Harold Browne, Mosheim, &c., &c., *once*, and was *successful* in *every one* of the *nine* papers. The present Bishop of Edinburg knows the facts.

Faithfully yours,

[REV.] JAMES MIDDLETON MACDONALD, [M.A.]

Treatment of Consumption

A Simplified Apparatus for the preparation and introduction of gases into the bowel (according to Dr. Bergeon's method) by Dr. H. N. Bryan, of Philadelphia.

This apparatus has advantages which others do not possess, and, being considerably lower in price than any devised for a similar purpose, it should commend itself to the favorable consideration of the medical profession. An illustrated descriptive circular sent to any address, on application.

Price of Apparatus, complete, in a neat portable Telescopic Case with Handle, ***$6.00***

Sample Card of the Iron-Dyed Silk (14 sizes) will be sent to any address, on application. Price, per Reel, 10 Cents.

WILLIAM SNOWDEN

Manufacturer, Importer, and Exporter of Surgical Instruments

No. 7 South Eleventh St., Philadelphia.

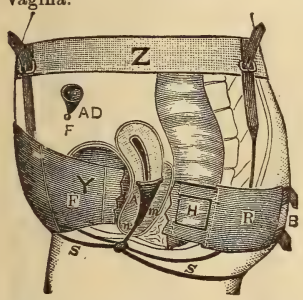
STAUFER'S

UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S). One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in diameter, the difference from one size to another being $\frac{1}{8}$ inch. The size most frequently used is $1\frac{3}{4}$ inches across the cup.

SELECTION In ordering, give exact measure around the hips, just below crest of ilium, and the width of cup on top, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE

The instrument complete, with belt Z, costs	$4.00
" " " " " Y, "	5.00

HYDROLEINE

(HYDRATED OIL)

FOR CONSUMPTION and WASTING DISEASES,

Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls equal to 120 Drops, contains:

Pure Cod Liver Oil...80 m. (drops)	Soda.....1.3 Grains.
Distilled Water.....35 "	Salicylic Acid.....1.4 "
Soluble Pancreatin.. 5 Grains.	Hyocholic Acid.....1.20 "

DOSE.—Two teaspoonfuls alone, or with twice the quantity of water to be taken thrice daily after meals.

HYDROLEINE (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a modicum of soda. Pancreatin is the digestive principle of fatty foods, and in the soluble form here used completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in results.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph.D., F. C. S., *and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by* G. OVEREND DREWRY, M.D. ***Copies of these works sent free on application.***

SOLD AT ALL DRUG STORES, AT $1.00 PER BOTTLE.

C. N. CRITTENTON,

Sole Agent for the United States. **115 FULTON ST., NEW YORK.**

A sample of Hydroleine will be sent free upon application, to any physician (inclosing business card) in the United States.

TAKE NOTICE

The supply of POCKET RECORDS offered for sale at a reduced price is now SOLD OUT! Hereafter the price will be—

Book for 30 Patients a week, with dates or without, $1.00

Book for 60 Patients a week, without dates only, $1.

Send POSTAL NOTE

Publisher

MEDICAL AND SURGICAL REPORTER

P.O. Box 843 PHILADELPHIA

FELLOWS'

HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The essential elements** to the Animal Organization—Potash and Lime.

The **Oxydizing Agents**—Iron and Manganese;

The **Tonics**—Quinine and Strychnine,

And the **Vitalizing Constituent**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars sent to Physicians on Application.

FOR SALE BY ALL DRUGGISTS.

TO EACH SUBSCRIBER.

---o---

Dear Doctor:

I beg your co-operation in endeavoring to get all the subscribers to the MEDICAL AND SURGICAL REPORTER to cordially accept a condition usual with first-class periodicals, that is, that subscriptions shall be paid in advance. There are some of our subscribers who still have accounts unsettled for the year 1888, and they are urged to pay the amount due for this year as soon as possible, so as to make it easier for them when next year begins to pay for that year in advance. The evidences of approval of the REPORTER by medical men are multiplying. The subscription list is growing larger, and it is hoped that all who are now subscribers will long continue their patronage, and that they will heartily support the publisher in endeavoring to maintain those principles of business which experience shows to be best for all, not only for the publishers but for also the subscribers.

Some may think it is kind to allow subscribers to run in debt, but it is not, and it is not fair to those who pay promptly, either;

SO SEND WHAT YOU OWE, SOON.

N.B.--If you add next year's subscription money, so much the better.

Make all checks or money-orders payable to

CHARLES W. DULLES.

Address,

P.O.Box 843, Philadelphia.

LEGS and ARMS with RUBBER FEET and HANDS

(MARKS' PATENTS.)

Indorsed by the United States Government, the Industrial Exhibition Commissioners of New York, Philadelphia, Atlanta, New Orleans, etc., the eminent surgeons in the country, the press, and over 9,000 men, women, and children who wear them, residing in all parts of the world.

The Rubber Foot and Hand possess the most natural appearance, the greatest durability and comfort of all artificial limbs. Vast numbers of mutilated men and women are, by the use of rubber feet and hands, enabled to mingle with the rest of the world without betraying their loss or experience great inconvenience. Farmers, mechanics, professionals, and even athletes, who have lost one or more of their limbs, are enabled to resume their vocations by the use of these remarkable inventions.

MR. A. A. MARKS: ITHACA, TOMPKINS CO., N.Y., Jan. 15, 1888.

DEAR SIR: Rubber feet are the wonders of the world. I have challenged every maker in the world to produce a man that has a pair of artificial feet to walk with me. I can walk a mile in thirteen minutes, and not hurry myself any. I do not take a back seat for any unprofessional with two good natural feet, in a one mile walk. I have the pleasure of announcing that my record in walking professionally is unequaled in the world by any one with artificial legs. THOMAS CLEARY.

By a copyright formula, furnished by us on request, applicants can supply us with all the data necessary to secure fit and satisfactory results, while they remain at home. One-half the legs and arms furnished by us are made from measurements and profiles, without our seeing the wearer. This new method is a great convenience for those living at a distance. Fit always guaranteed.

A treatise of 400 pages, and nearly 200 illustrations, and nearly a thousand endorsements and testimonals, sent to those needing artificial legs or arms, who will give a description of their case. The same will be sent to physicians and surgeons free of charge. Address,

A. A. MARKS, 701 Broadway, New York City.

NEWS AND MISCELLANY.....812

THE NEW HYPNOTIC
SULFONAL-BAYER.

SULFONAL was discovered by Prof. Eugen A. Baumann, of Freiburg University, and was first prepared by the Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld.

SULFONAL (Diæthylsulfondimethylmethan) is in the form of colorless prisms, odorless, and tasteless, melting at 125.5° C. (258° F.) and has the composition $(C H_3)_2=C=(C_2 H_5 SO_2)_2$. It is slightly soluble in cold water, but easily soluble in hot water or alcohol.

SULFONAL was first examined as to its physiological and pathological effects by Prof. A. Kast, of Freiburg University, and its hypnotic action was discovered and studied by him.

Since then SULFONAL has been the subject of numerous trials and experiments by many eminent and experienced physicians. Their testimony is unanimously favorable, and the conclusions reached by them are as follows:

SULFONAL is a prompt and reliable hypnotic, which in proper doses, produces quiet, natural sleep, lasting a number of hours.

SULFONAL has no unfavorable effects on the heart and the circulation, nor on the temperature, the pulse, or the respiration.

SULFONAL produces no disagreeable secondary symptoms; the patients with very few exceptions awake from their sleep feeling strong and greatly refreshed.

SULFONAL does not interfere with the process of digestion.

SULFONAL is a hypnotic, and not a narcotic; it acts by giving rest to the cells of the cerebral cortex, thereby causing sleep.

SULFONAL does not create an unconquerable desire for its repeated use; there is no danger of a SULFONAL-habit. Neither is it necessary to increase the dose after long-continued use.

SULFONAL is best administered at supper-time, dissolved in hot liquids, *e. g.*, a bowl of soup or broth, a cup of milk, tea, coffee, cocoa, etc.

These points will be found to be fully exhibited in the series of contributions contained in our pamphlet, which will be mailed on application.

SULFONAL-BAYER is supplied by us in half-ounce and one-ounce vials.

We prepare 5-grain and 15-grain Tablets of Sulfonal-Bayer. The tablet form is admirably adapted to the purpose of administering this drug, as when they are placed in the liquids, they disintegrate and are thus received into the system.

We also put up Sulfonal-Bayer in the form of our Soluble Pills, containing five grains each.

THE NEW ANTIPYRETIC
PHENACETINE-BAYER.

Phenacetine-Bayer (Para-Acetphenetidine) is a white, glossy, crystalline powder, perfectly tasteless, melting at 135° C.=307° F. and has the composition $C_6 H_4 <^{O.C_2H_5}_{NH(CO—CH_3)}$.

It is slightly soluble in water, a little more soluble in glycerine, but most freely in alcohol.

Phenacetine-Bayer was first prepared by the Farbenfabriken, formerly Friedr. Bayer & Co., Elberfeld, and is of absolute purity and uniform quality.

Summarizing the superiority of Phenacetine-Bayer over other antipyretics and antineuralgics, the following conclusions are formed:

1. ***Phenacetine-Bayer is an efficacious antipyretic.***
2. ***It does not develop any disagreeable or noxious after-effects.***
3. ***The dose required is half that of Antipyrine.***
4. ***It is perfectly tasteless.***
5. ***On account of its innocuousness and tastelessness, it is a valuable antipyretic both in adults and in children.***
6. ***Phenacetine-Bayer is an important antineuralgic; its effect is more energetic than that of Antipyrine and does not cause lassitude or any other disagreeble symptoms.***

Our pamphlet on Phenacetine-Bayer, containing the valuable testimony of eminent physicians will be mailed on application.

We offer Phenacetine-Bayer in one-ounce vials, or in the form of our Soluble Pills of the strength of two and four grains to each pill.

Another Special Notice.

Copies of REPORTER of October 27 and November 3, 1888, are almost exhausted, and none will be sold hereafter at any price except to Paid-up Subscribers.

THERE IS A PEPSIN

WHICH IS UNIFORMLY ACTIVE, PERMANENT, AND RELIABLE,

IT IS "FAIRCHILD'S."

This Pepsin will not spoil, will not become soft and sticky in the vial, even if left long uncorked.

Fairchild's Pepsin will not "gum up" if dispensed in powders, plain, or with the drugs usually combined with pepsin.

Fairchild's is not a partial peptone, and has none of the well-known characteristics of peptone.

Fairchild's is the pioneer pepsin, it showed the way. It "got there" early.

Its activity has never been exaggerated.

All this time, whilst other manufacturers were still offering the high-dilution saccharated and amylated article, Fairchild's Pepsin was steadily making its way on its merit. Now, no one ventures to ask a hearing for these *placebo-pepsins*.

When physicians now prescribe "pepsin" they mean pepsin—not milk sugar, and pepsin.

All these years, Fairchild's Pepsin was always and everywhere found to do just what was claimed for it—in spite of the attitude, genuine or assumed, which held that all "claims" about pepsin must be taken with a liberal discount.

Every *bona fide* test demonstrated its reliability.

We have never found it necessary to explain or excuse any deficiency or inaction as due to "deteriorated" specimens.

Fairchild's will not disappoint the prescriber under any condition proper for pepsin.

With Such a Record Fairchild's Pepsin is a good one to stand by.

Clinical and practical instruction in the medical and surgical specialties is afforded to physicians only, during the entire year. The College has well-fitted laboratories of pathology, miscroscopy, anatomy, surgery, and electro-therapeutics.

In addition to the clinical facilities of the dispensary, the professors utilize, for purposes of instruction, their services in the Philadelphia, Pennsylvania, Wills, Howard, Episcopal, Presbyterian, German, St. Mary's and, St. Christopher's Hospitals.

The Fee for each branch, for six consecutive weeks from date of issue, is $15.00. Any number of branches may be taken. General Ticket for the thirteen clinical courses, for six consecutive weeks, $100.00. Ticket for Summer course, from July 2d to September 15th, $60.00. One month, Summer course, $25.00. One branch, Summer course, $10.00.

ANOTHER STRANGE THING.

---o---

Of all the new editions of well known Physicians' Visiting Lists which we have seen this year, not one but looks poorer and meaner than it did a year ago!

Why should this be? There is not much profit in these books; but it does not seem good policy to try to make it bigger by making the book poorer. At least we think so here; and so the POCKET RECORD which has been issued from this office for TWENTY THREE YEARS will be issued this year better than it ever was before. All the old, and approved features are retained, and some new ones are introduced. Special attention has been paid to the paper, printing, and binding. The 30 Patient books are printed with dates, or without them. This, because it is clear that many physicians prefer books with dates. Our subscribers will be safe in ordering, and let them do it now.

The Curd of Cow's Milk
Made as Soft and Digestible as that of Woman's Milk.

"From experiments which I have recently made — and my thanks are due to Prof. Salisbury of the Woman's Medical College, for assistance — it seems that the claim which is made by the advocates of the MELLIN'S FOOD is true, and that the addition of this food to cow's milk does cause it to break up in very small, flaky curds."— *Dr. Chas. Warrington Earle, Professor of Diseases of Children, Woman's Medical College, Professor of Obstetrics, College Physicians and Surgeons, Chicago, in his paper on Infant Feeding, before the American Medical Association, May, 1888.*

Any physician having a case in which he desires to test MELLIN'S FOOD can obtain a sample sufficient for trial, free of all expense, by application.

GENUINE BLAUD'S PILLS.

These pills, which have been inserted in the new French Pharmacopœia, have been employed with the greatest success for more than fifty years by most French and foreign physicians, to cure anemia, chlorosis, and all chlorotic affections in which iron is indicated.

Here is the opinion of men most eminent in medical scienc who have employed them:

"For thirty-five years, in which I have practised medicine, I have recognized the incontestable advantages of BLAUD'S PILLS over all other ferruginous preparations, and I regard them as the best anti-chlorotic."—DR. DOUBLE, *Ex-President of the Academy of Medicine.*

"Of all the ferruginous preparations, which have given good results in the treatment of chlorotic affections, BLAUD'S PILLS appear to us to deserve to hold the first rank."—*Dictionnaire universel de médecine*, Vol. II, p. 99.

These pills, prepared according to the genuine formule of the originator, by his nephew, Aug. Bland, Pharmacist of the Faculty of Paris, are sold only in bottles of 200 pills and half bottles of 100 pills, at a cost of 5 and 3 francs ($1.00, and seventy-five cents), and never in smaller quantities. *See that his name is stamped on each pill.* PARIS, 8 RUE PAYENNE, and at every Pharmacy. (Beware of imitations.)

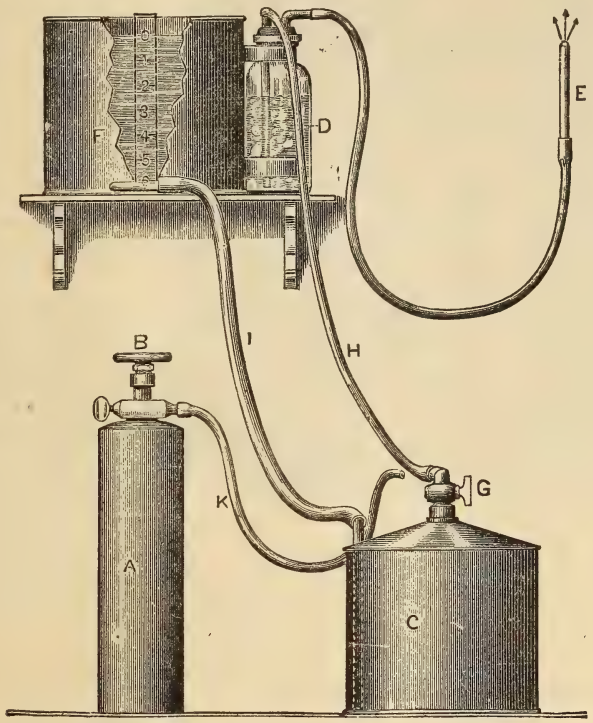
PURE OXYGEN

AND

APPARATUS FOR ITS THERAPEUTIC ADMINISTRATION



At the solicitation of a number of medical practitioners interested in oxygen treatment, we have devised apparatus for the therapeutic administration of this gas both by inhalation and by enema. We present an illustration of the latter. It is provided with a gauge by which the quantity of gas administered can be readily ascertained. We believe the apparatus we offer will be found to be the most convenient and economical device for the purpose on the market. We are prepared to supply Pure Oxygen Gas, or a mixture of Oxygen and Nitrous Oxide in definite proportions respectively of 20 per cent. and 40 per cent. of Nitrous Oxide, in cylinders of 40 or 100 gallons each. Full directions sent with each apparatus.

PRICES.

ENEMA APPARATUS	$12.00
INHALING APPARATUS	5.00
FORTY GALLON CYLINDER	6.00
FORTY GALLON CYLINDER FILLED	8.00
ONE HUNDRED GALLON CYLINDER	15.00
ONE HUNDRED GALLON CYLINDER FILLED	20.00

The Gas whether pure or mixed is supplied at the uniform price of 5 cents per gallon. The cost of the cylinders will be refunded on their return empty, with the valves in good condition.

PRICE REDUCED.

True Salicylic Acid.

CRYSTALLIZED FROM

WINTERGREEN OIL.—ITS NATURAL SOURCE.

DR. P. W. LATHAM, Downing Professor of Medicine at Cambridge (England), lecturing on the treatment of gout and rheumatism at the Royal College of Physicians, says:

"The true Salicylic Acid obtained from the vegetable kingdom must alone be employed. If you have to give large doses, avoid giving the artificial product obtained from carbolic acid, however much it may have been dialyzed and purified. Give the acid without any alkali or base," etc.

A reprint of this exceedingly valuable paper will be sent on application.

A DESIDERATUM—not always appreciated.

The quality of medicines used in the prescription is as important a factor in the cure of disease as a correct diagnosis; and a physician violates no code, either of ethics or morals, in demanding of his druggist that which he knows to be reliable, instead of leaving to the latter to decide whose preparations he shall or shall not use.

TO EACH SUBSCRIBER.

---o---

Dear Doctor:

I beg your co-operation in endeavoring to get all the subscribers to the MEDICAL AND SURGICAL REPORTER to cordially accept a condition usual with first-class periodicals, that is, that subscriptions shall be paid in advance. There are some of our subscribers who still have accounts unsettled for the year 1888, and they are urged to pay the amount due for this year as soon as possible, so as to make it easier for them when next year begins to pay for that year in advance. The evidences of approval of the REPORTER by medical men are multiplying. The subscription list is growing larger, and it is hoped that all who are now subscribers will long continue their patronage, and that they will heartily support the publisher in endeavoring to maintain those principles of business which experience shows to be best for all, not only for the publishers but for also the subscribers.

Some may think it is kind to allow subscribers to run in debt, but it is not, and it is not fair to those who pay promptly, either;

SO SEND WHAT YOU OWE, SOON.

N.B.--If you add next year's subscription money, so much the better.

Make all checks or money-orders payable to

CHARLES W. DULLES.

Address,

P.O.Box 843, Philadelphia.

BROMIDIA

THE HYPNOTIC.

FORMULA.—

Every fluid drachm contains 15 grains EACH of Pure Chloral Hydrat. and purified Brom. Pot., and one-eighth grain EACH of gen. imp. ext. Cannabis Ind. and Hyoscyam.

DOSE.—

One-half to one fluid drachm in WATER or SYRUP every hour, until sleep is produced.

INDICATIONS.—

Sleeplessness, Nervousness, Neuralgia, Headache, Convulsions, Colic, Mania, Epilepsy, Irritability, etc. In the restlessness and delirium of fevers it is absolutely invaluable.

IT DOES NOT LOCK UP THE SECRETIONS.

PAPINE

THE ANODYNE.

Papine is the Anodyne or pain-relieving principle of Opium, the Narcotic and Convulsive Elements being eliminated. It has less tendency to cause Nausea, Vomiting, Constipation, Etc.

INDICATIONS.—

Same as Opium or Morphia.

DOSE.—

(ONE FLUID DRACHM)—represents the Anodyne principle of one-eighth grain of Morphia.

IODIA

The Alterative and Uterine Tonic.

FORMULA.—

Iodia is a combination of active principles obtained from the Green Roots of Stillingia, Helonias, Saxifraga, Menispermum, and Aromatics. Each fluid drachm also contains five grains Iod. Potas., and three grains Phos. Iron.

DOSE.—

One or two fluid drachms (more or less as indicated) three times a day before meals.

INDICATIONS.—

Syphilitic, Scrofulous and Cutaneous Diseases, Dysmenorrhea, Menorrhagia, Leucorrhea, Amenorrhea, Impaired Vitality, Habitual Abortions, and General Uterine Debility.

ST. LOUIS, MO.

An Important Communication
TO PHYSICIANS.

Thirteen years have now elapsed since the introduction of SCOTT'S EMULSION of PURE NORWEGIAN COD LIVER OIL with HYPOPHOSPHITES of LIME and SODA, since which time its growth and development have been very large, not only in this country but in South America, Great Britain and a large part of Continental Europe, and it has, in a very large degree, supplanted the Plain Cod Liver Oil. Its success is largely due to the happy combination of all its components, making a perfect chemical union, that will not separate for years, which we believe is not true of any other Cod Liver Oil preparation.

The innumerable reports from Physicians, of the brilliant results obtained justifies the statement that in almost every case where Cod Liver Oil is indicated, Scott's Emulsion is infinitely superior.

Physicians who have never tried this Emulsion, or who have been induced to try something else in its stead, will do us the favor to send for sample, and we know they will always use it in preference to plain Cod Liver Oil or any other preparation.

We also call your attention to the following preparations:

CHERRY-MALT PHOSPHITES.

A combination of the tonic principles of Prunus Virginiana, Malted Barley, Hypophosphites of Lime and Soda, and Fruit Juices. An elegant and efficient brain and nerve tonic.

BUCKTHORN CORDIAL (Rhamnus Frangula.)

Prepared from carefully selected German Buckthorn Bark, Juglans Bark, and Aromatics. The undoubted remedy for Habitual Constipation.

Be sure and send for samples of the above—delivered free.

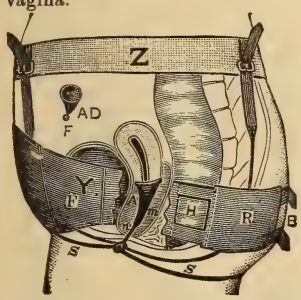
STAUFER'S

UTERINE SUPPORTER

HARD RUBBER. SPRING STEM.

This supporter, as now made, is the result of seventeen years' experience in manufacturing instruments for the treatment of displacements of the womb, aided by the suggestions of a large number of practitioners who have used these well-known supporters in the past.

The construction of the instrument shown in the cut is such that the cup inclines forward, and this inclination, together with the curve in the stem adapts it to the axis of the uterus and vagina.



There is a Coil-spring in the tube at *m*, which prevents shock to the womb when the patient sits down.

The instrument is held in position by means of a belt (Z or Y) and elastic cords (S S). One form of belt (Z) surrounds the waist; another (Y) is made like an abdominal supporter. The belts are made of 3-ply, fine cotton material, with elastic hip-straps, and buckle at the back.

Self-Sustaining Supporter.—The supporter may also be used without a belt, when no great bodily exertion calls for the latter. A little stem (F) is screwed on the cup (A), instead of the longer stem (*n*), as shown in the figure A D, and the instrument becomes self-sustaining.

The cup is made in sizes ranging from $1\frac{1}{4}$ inches to $2\frac{1}{4}$ inches in diameter, the difference from one size to another being $\frac{1}{8}$ inch. The size most frequently used is $1\frac{3}{4}$ inches across the cup.

SELECTION In ordering, give exact measure around the hips, just below crest of ilium, and the width of cup on top, as nearly as this can be estimated.

EXCHANGE Dr. Staufer will exchange one size of the supporter for another, if desired. PROVIDED the request is made within a reasonable time, and when the *three rubber parts* are returned in good condition.

THE BELTS ARE NOT EXCHANGED.

Because they are apt to show the effect of use, and there is no trouble about getting a good fit, if the correct measure is sent.

PRICE

The instrument complete, with belt Z, costs	$4.00
" " " " " Y, "	5.00

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

Prepared from the Aletris Farinosa or True Unicorn and Aromatics.

INDICATIONS.

Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to Prevent Miscarriage, Etc.

DOSE:—ONE TEASPOONFUL THREE OR FOUR TIMES A DAY.

UNRIVALED AS A UTERINE TONIC IN IRREGULAR, PAINFUL, SUPPRESSED AND EXCESSIVE MENSTRUATION.

It Restores Normal Action to the Uterus, and Imparts Vigor to the Entire Uterine System.

☞Where women have miscarried during previous pregnancies, or in any case where miscarriage is feared, the ALETRIS CORDIAL is indicated, and should be continuously administered during entire gestation.

CHAS. CLAY, M. R. C. S., Manor House, Dewsbury, England, says:—I find Aletris Cordial (Rio) is of great service in threatened miscarriage.

FRANCIS E. CANE, L. R. C. S., &c., Leeds, England, says:—I have tried the Aletris Cordial (Rio) in two cases of long standing dysmenorrhea, with excellent results. One of these patients has spent a week in bed every month for two years. After all the usual remedies, I put her on Aletris Cordial, and for the last two periods she has been out and about all the time.

L. M. WATSON, M. D., Delhi, Ills., says:—I have used Aletris Cordial (Rio) in cases of dysmenorrhea. suppressed menses and threatened miscarriage, and also, combined with Celerina, as a tonic after confinement, with the happiest results, and now I am using it on a case of leucorrhea, with injections of S. H. Kennedy's Extract of Pinus Canadensis, and it is acting like a charm.

P. H. OWEN, M. D., Morganville, Ala., says:—I have prescribed Aletris Cordial (Rio) in several cases with the most satisfactory results, and regard it as the best uterine tonic I have met with in a professional experience of over twenty-five years. In cases of threatened miscarriage it acts like a charm. Would recommend its continuous administration in all cases when there is any indication of miscarriage.

Dr. W. BERTHELOT, Santander, Spain, says:—I have tried the Aletris Cordial (Rio), and it has seemed to me to be useful, especially in cases of dysmenorrhea.

Dr. RASQUINET, Jupile, near Liege, Belgium, says:—I tried Aletris Cordial (Rio) in the case of a woman who had had several miscarriages at the end of five months, and who is now again pregnant, having reached the seventh month: thanks to Aletris Cordial.

R. REECE, M. R. C. S., Walton-on-Thames, England, says:—Aletris Cordial (Rio) in painful menstruation is most valuable. A wife of a minister suffered much, and had had three miscarriages. I prescribed Aletris Cordial. She has for the first time, gone her full time, and was safely confined with a male child.

J. T. COLLIER, M. D., Brooks, Me., says:—I have used your Aletris Cordial (Rio) in cases of females at the menopause. Consider it one of the finest remedies for these cases.

Dr. GORDILLON, St. Amand, France, says: I have tried the Aletris Cordial (Rio) in a case of dysmenorrhea. The result I obtained from the use of your preparation was excellent, better than I had obtained in the same patient by prescribing the usual remedies employed in such cases.

W. F. TOOMBS, M. D., Morrillton, Ark., says:—I have used a great deal of your Aletris Cordial (Rio) and I find it all you claim for it in amenorrhea, dysmenorrhea, metritis, leucorrhea; I don't think it has an equal. I have used it in two cases of threatened miscarriage and the trouble was obviated. For a general Uterine Tonic I know of nothing superior.

R. D. PATTERSON, L. R. C. S. &c., Medical Officer, Caledon Dispensary, Co. Tyrone, Ireland, says:—I have very great pleasure in testifying to the very high opinion I hold of Aletris Cordial (Rio) in threatened miscarriage.

BUFFALO LITHIA WATER

IN THE TREATMENT OF

ALBUMINURIA, WHETHER OF BRIGHT'S DISEASE, PREGNANCY, OR SCARLET FEVER.

Dr. WM. B. TOWLES, Professor of Anatomy and Materia Medica in the Medical Department of the University of Virginia.

"BUFFALO LITHIA WATER, No. 2, belongs to the ALKALINE or, *perhaps, to the* ALKALINE-SALINE Class, *for it has proved far more efficacious in many diseased conditions than any of the simple* ALKALINE *waters.*

. . . . . .

"*Its effects are marked in causing a disappearance of* ALBUMEN *from the Urine.* In a single case of BRIGHT'S DISEASE OF THE KIDNEYS I witnessed *decided beneficial results from its use, and from its action in this case I should have great confidence in it as a remedy in certain stages of the disease.*"

Dr. GRAEME M. HAMMOND, of New York, Professor of Diseases of the Mind and Nervous System in the New York Post-Graduate Medical School and Hospital.

"In *all* cases of BRIGHT'S DISEASE of the KIDNEYS I have found BUFFALO LITHIA WATER *of the greatest service in increasing the quantity of urine and in eliminating the* ALBUMEN."

Dr. GEORGE W. MILTENBERGER, Professor of Obstetrics, University of Maryland,

Before the Medical and Chirurgical Faculty of the State of Maryland, recommended BUFFALO LITHIA WATER as an ALKALINE Diuretic in ALBUMINURIA of PREGNANCY.—See *Trans. Faculty of State of Maryland,* 1886.

Dr. WM. H. DOUGHTY, Professor of Materia Medica and Therapeutics, Medical College of Georgia; Member of American Medical Association, etc.

"Over the NAUSEA AND VOMITING OF PREGNANCY, PARTICULARLY IN THE LATTER MONTHS, WHERE URÆMIC CONDITIONS are possibly established, and in PUERPERAL CONVULSIONS, URÆMIA CO-EXISTING, BUFFALO LITHIA WATER often exerts *marked control.*"

Dr. CALEB WINSLOW, 23 McCulloh Street, Baltimore, Member of the Medical and Chirurgical Faculty of Maryland.

"I have found the BUFFALO LITHIA WATER, Spring No. 2, of marked service in relieving the *Nausea* of *Pregnant Women.* I frequently resort to it at intervals *during the whole course of Pregnancy.* Being *antacid, laxative, diuretic, and tonic, it seems well adapted to relieve the disturbances usually attendant upon Gestation, and I have no doubt its free use might remove* URÆMIC POISON, *and prevent Convulsions produced thereby.*"

Dr. JOS. HOLT, New Orleans, President Board of Health, State of Louisiana.

"I have prescribed BUFFALO LITHIA WATER freely in affections of the *Kidneys* and *Urinary* passages, particularly in GOUTY *subjects,* in ALBUMINURIA, and in irritable conditions of the *Bladder* and *Urethra* in *females.* The results have been such as to satisfy me *of the extraordinary value of this Water in a large class of cases usually most difficult to treat.*"

Dr. JAMES B. McCAW, Professor of the Practice of Medicine in the Virginia Medical College.

[Extract from the Proceedings of the Richmond Academy of Medicine, October 15, 1878.]

"Dr. McCaw also spoke of the great value of BUFFALO LITHIA WATER in ALBUMINURIA of *Scarlet Fever* and in ALBUMINURIA of *Pregnant Women.*"

Dr. J. T. DAVIDSON, New Orleans, La., ex-President New Orleans Surgical and Medical Association.

"I have for several years prescribed BUFFALO LITHIA WATER, Spring No. 2, in all cases of *Scarlet Fever,* directing it to be drunk *ad libitum, with the effect of relieving all traces of* ALBUMEN *in the urine,* and have found it equally efficacious in renal diseases requiring the use of alkaline water."

Dr. G. W. SEMPLE, Hampton, Va., President Medical Society of Virginia.

"In SCARLET FEVER I have known BUFFALO LITHIA WATER *restore a healthy and abundant secretion of Urine, when it was highly charged with* ALBUMEN *and the secretion almost suppressed.*"

Dr. MARTIN L. JAMES, of Richmond, Va., Professor of Materia Medica and Therapeutics, Medical Society of Virginia.

[Proceedings of the Richmond, Virginia, Academy of Medicine, December 16, 1880.]

"The President of the Academy, Dr. M. L. James, reported a case of *Congestion* of the *Kidneys* in a lady eight months advanced in *Pregnancy, attended by marked Œdema,* both over the extremities and surface, and by URÆMIC POISONING *to such an extent as very seriously impaired the vision of the patient,* relieved by the free use of this Water for three weeks.

"Other remedies, he stated, were used in these cases, *but the favorable results seemed clearly attributable to the action of the Water.*"

Dr. HARVEY L. BYRD, of Baltimore, President and Professor of Obsetrics and Diseases of Women and Children in the Baltimore Medical College, formerly Professor of Practical Medicine, etc.

"I have prescribed BUFFALO LITHIA WATER with the most satisfactory results, both as a *remedy* and *prophylactic* in the *Parturient* or *Pregnant Puerperal Eclampsia* or *Convulsions; and I may say that I know of no remedy of equal efficacy with the Water of Spring No. 2 in Sequelæ of Scarlatina.*

"It has an *ascertained value* in BRIGHT'S DISEASE. *A knowledge of its action in that disease thus far would seem* to warrant the belief that it would, in many instances, *at least in its early stages, arrest it entirely, and in its more advanced stage prove a decided comfort and palliative.*

Water in cases of one dozen half-gallon bottles, $5.00 per case at the Springs.

THOMAS F. GOODE, Proprietor,

BUFFALO LITHIA SPRINGS, VIRGINIA.

SUCCUS ALTERANS

(McDADE.)

SUCCUS ALTERANS is a purely vegetable compound of the preserved juices of Stillingia Sylvatica Lappa Minor, Phytolacca Decandra, Smilax Sarsaparilla, and Xanthoxylum Carolinianum, as collected by DR. GEO. W. MCDADE, exclusively for ELI LILLY & Co., and endorsed by DR. J. MARION SIMS.

SUCCUS ALTERANS continues to gain favor from its remarkable Alterative and Tonic properties, *eliminating specific poison from the blood* and *increasing the proportion of red corpuscles in anæmic patients* to a wonderful degree; is endorsed by the medical profession, and in use by many hospitals of note.

SUCCUS ALTERANS in venereal and cutaneous diseases is fast supplanting Mercury, the Iodides, and Arsenic; and is a certain remedy for Mercurialization, Iodism, and the dreadful effects often following the use of Arsenic in skin diseases.

SUCCUS ALTERANS is also strongly recommended for its Tonic and Alterative effects in myriad forms of scrofulous disease, and in all cases where anæmia is a factor. Such patients rapidly develop a good appetite, sleep soundly, and gain flesh rapidly. Many cases are on record where patients increased ten to twenty-five pounds in weight in a few weeks.

SUCCUS ALTERANS is giving satisfactory results in treatment of *Chronic Rheumatism*, and can be used with confidence.

SUCCUS ALTERANS may be given for any length of time, without injury to the patient.

SUCCUS ALTERANS is put up in pint round amber bottles, and *never in bulk.*

PHYSICIANS who have not received DR. MCDADE'S latest publication, the MONOGRAPHIA SYPHILITICA, should send their address, mentioning this journal, and we will mail a copy. It contains a paper, illustrated with colored plates, by DR. D. H. GOODWILLIE, of New York, on the "Sequelæ of Syphilis," reports of cases in practice, and many other valuable papers.

ELIXIR PURGANS.

ELIXIR PURGANS (LILLY) reliably stimulates the dormant liver without undue irritation, and has gentle yet positive effect upon the alimentary tract. In HABITUAL CONSTIPATION, so common in WOMEN AND CHILDREN, it will be found particularly useful. Its endorsement at Bellevue and many other prominent hospitals East and West, as well as its employment in general practice by the most eminent medical men, confirms the experience of years in its use.

Each Teaspoonful Represents	
Rhamnus Purshiana,	**10 grs.**
Euonymus Atropur.,	**8 grs.**
Cassia Acutifolia (Purif.)	**10 grs.**
Iris Versicolor,	**4 grs.**
Hyoscyamus Niger,	**2 grs.**
Aromatics, etc.	

IN PRESCRIBING, PLEASE BE CAREFUL TO WRITE

ELIXIR PURGANS (LILLY),

THAT OTHER PREPARATIONS MAY NOT BE SUBSTITUTED.

HIGHLY RECOMMENDED.

We take pleasure in endorsing the ELIXIR PURGANS (LILLY) as prepared from the above formula, for in it we find a near approach to positive *perfection* in the form of a *Liquid Cathartic*, and, from our experience with the preparation, can highly recommend it to the profession.

JAMES R. HEALY, M.D., *Sup't Infants' and Children's Hospital, Randall's Island, N. Y.*
W. G. ROBINSON, M.D., *Surgeon to Bureau of Medical and Surgical Relief to the Out-Door Poor Bellevue Hospital, N. Y.*
J. H. SHORTER, M.D., *Surgeon to New York Ophthalmic and Aural Institute.*
JOHN A. ARNOLD, M.D., *Medical Sup't Kings County Hospital, Flatbush, N. Y.*
NELSON B. SIZER, M.D., *Senior Surgeon Brooklyn and E. Brooklyn Dispensary, N. Y.*
EDWARD J DARKEN, M.D., *Medical Sup't Demilt Dispensary, New York City.*
A. W. CATLIN, M.D., *Attending Physician St. John's Hospital, Brooklyn, N. Y.*
CHAS. H. COBB, M.D., *Medical Sup't Columbus Lying-in Hospital, Boston, Mass.*
H. S. DEARING, M.D., *Fellow of Massachusetts Medical Society, etc.*
T. J. BRODRICK, M.D., *Surgeon Charlestown, Mass., Free Dispensary and Hospital.*

ELI LILLY & CO. Pharmaceutical Chemists, Indianapolis, Ind., U. S. A.

SUPPLIED BY ALL DRUGGISTS.

Before you begin the New Year

think how much time you have spent in this year over your accounts, and what a bother it has been to make out your bills!

Now one of the great merits of

The Model Ledger

is that it enables a physician to make out his bills with great ease. Beside this, it tells at a glance just how much he has earned in any quarter; how much he has received; and how much is still due him. These are all good things for a doctor to know.
